During the course of these hearings a great deal of valuable information was presented by small businessmen representing many different segments of the food industry. The nature and scope of problems that are causing serious, sometimes ruinous difficulties for small businessmen, were revealed to the members of the subcommittee by these witnesses.

In recognition of the interest shown over the problems of the independent operator in this vast industry by Representative ROOSEVELT during these hearings, the National Candy Wholesalers' Association invited him to address their convention in Chicago today on, "The Key to Small Business Survival." Representative ROOSEVELT has a record of giving constructive, positive assistance to small businessmen whenever possible, and the views and proposals presented in this speech will be noted with interest. Because of its broad implications, which go beyond the immediate problems of the day, I believe this speech will attract the attention of those concerned with the importance of protecting the small businessman in a free and competitive enterprise system.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE KEY TO SMALL BUSINESS SURVIVAL

(Address by the Hon. JAMES ROOSEVELT, Democrat, of California, before the National Candy Wholesalers' Association, Chicago, Ill., July 27, 1959)

I am very happy to be with you today to discuss the "Key to Small Business Survival." As a group of small businessmen, you are well aware of the fact that a key must be found if small business is to survive.

Last month in Washington, the Subcommittee of the House Small Business Committee, of which I am chairman, opened its investigation into the distribution problems of small business in the food industry. Your association, with many others, cooperated with the subcommittee in presenting the problems which you face.

This investigation has been hailed by some as one of the most important studies made of the food industry in a quarter of a century—and from the testimony we received, it is being made none too soon.

Much of the legislation which has been passed by Congress to aid and protect small businesses has had as its fundamental purpose the protection of the free and competitive enterprise system. It is the firm belief of those of us concerned with problems of small business that the continuance of the economic system we know in the United States is based on the existence of small business as well as large business.

The concentration of economic power in the hands of a few can lead to disaster, for the use of power often leads to its misuse. And in our country, when an economic situation is injurious to the public interest—Government steps in.

I believe strongly in the free and competitive enterprise system which has made our country great—and I want to keep it. I don't want to see State socialism. If the concentration of power in a single industry becomes an evil force, and contrary to the best interests of our people, in the end that industry will be nationalized. We must prevent this.

The facts given to the committee in Washington by many different groups of small businessmen indicated to us that there is a concentration of power developing in the hands of a few in the food industry. While there still remain many areas of competition, many have been eliminated. These are warning signs. Signs that we must heed, and we must act upon.

Today the food industry is the largest single industry in our economy. It is a $50 billion business. Many changes have taken place in the structure of this business in the last 20 years. Changes with which we are all familiar. The corner grocery store has all but disappeared from the neighborhoods and is being replaced by vast supermarkets. New products, frozen foods and different concepts of marketing have changed the food industry drastically.

In the period from 1948 through 1958, the total amount of annual sales through food stores rose from about $31 billion to more than $50 billion, but the number of merchants engaged in food retailing declined sharply. About 10 years ago more than 400,000 food stores were in business. The 1954 census showed that less than 350,000 stores were engaged primarily as food retailers.

The number of large retail food chains declined from 273 to 77 and less than 35

percent of these accounted for 77 percent of the total food chain sales.

We have seen the growth of the giants in the past 20 years. Fifteen of the largest chains accounted for 29.4 percent of total sales—and the big four (A. & P., Safeway, Kroger, and American Stores) accounted for 19.6 percent of total sales in 1957.

Since 1955, 2,657 locally owned food stores have been "acquired" by mergers. Their estimated total sales volume was almost $3 billion—equal to the current total sales of grocery stores in 14 States.

The largest chain—A. & P., has more than $4.7 billion in sales, over 4,000 stores, and is more than twice the size of its largest competitor. Sears, Roebuck had only $3.7 billion in sales in 1958.

If you accept the definition of a chain as four or more stores, they account for approximately 43 percent of the total retail food business in the country.

I believe that these facts indicate a high degree of concentration of power in the food industry. And I also believe that it is time we did something about it.

It is important that those of you in the wholesale candy business, and your colleagues who wholesale in other phases of the food industry, understand this situation and your responsibility in it.

Your executive secretary, Clarence McMillan, presented facts to the subcommittee last month which revealed that the candy wholesalers are faced with the same problems as the small meatpackers, the frozen food distributors, the preserve manufacturers, the small poultry and egg producer, the independent retail wholesale grocer and the farmers. The gigantic food chains are taking over the food industry from the crop to the shelf, and the small businessman is being squeezed out. "Grow big or die," former Gov. Ellis Arnall told the committee. "The small businessman is no longer able to compete in the marketplace."

The problems that you face as candy wholesalers are the same as those described by other small businessmen in the food industry.

Your secretary told the committee that candy is being used as a loss leader. The chains sell it at below cost prices to bring customers into the stores. The poultry industry has the same problem—and today thousands of them have gone into bankruptcy.

Chainstores, we were told, are receiving competitive buying advantages of one sort or another, which permit them to sell at very low prices—prices even lower than the wholesaler and retailer can get. A tobacco wholesaler from New Mexico testified that equal opportunity to purchase merchandise competitively is one of the most acute problems small business faces.

Mr. McMillan mentioned advertising allowances, promotional allowances, vertical integration, and mergers. Time and time again witnesses told the committee of the serious situation they are in because of the misuse of these practices in the food industry.

You as small businessmen in the wholesale candy field are feeling the results of revolutionary changes in production and distribution methods in the food industry.

You are an important part of the food picture. Thirty-five percent of the candy purchased is sold through food stores. But there are fewer food stores, for in ten years more than 50,000 stores have disappeared.

In 1950 there were 8,500 candy wholesalers supplying independent retailers. Today there are a little over 5,000 of you.

We are told that today a food chain is the largest candy manufacturer in the country, manufacturing candy to sell in its own stores. There is no place for the wholesale candy man in this picture.

Price wars are a common occurrence in the food industry. The housewife is delighted with the cut prices on dairy products, coffee, and fruit juice, and picks up these so-called week end bargains at the chain stores. And then what happens when the small grocer gives up and goes out of business, unable to compete in these price wars? The prices of these commodities go up and stay up.

Fewer and fewer firms are buying a larger and larger percentage of the total farm commodities. And the farm income which stood at $17 billion in 1948, slipped back to less than $11 billion in 1958. While the big chains are offering lower prices to the housewife, the small farmer is thinking—"Grow Big or Die".

Today 95 percent of all the broilers consumed by the American public are raised under some kind of a contract between the farmer and a company. The farmer has made very little profit and has lost control of his own operation. One small poultry owner called it a return to serfdom.

These tragedies result from monopolies. The evils of monopoly were well known to our forefathers. Thomas Jefferson, I am told, wrote a clause in a draft of the Constitution, which would restrict monopoly. Unfortunately, it was deleted. Many of our State constitutions prohibit monopoly.

The people of Italy and Germany learned that monopoly results in a loss of not only their economic freedom, but their social and political freedom as well. Democracy and our traditional free to compete-fairly economic system cannot live in the same climate with monopoly. One must die.

It is this threat of monopoly which has been presented to the subcommittee by small businessmen which deeply concerns me.

What can we do?

Businessmen in the industry should meet and advise on proper actions to protect the free enterprise system. The businessmen have a responsibility which they must meet.

This is one key to survival.

If the businessman does not present proposed solutions, others will come up with the best answers they can, but they would not be the best ones they could have reached had they had the help of the industry.

We have opened our study in Washington with a presentation to the subcommittee of the problems of small businessmen in the many different fields in the food industry. It is our intention to carry our hearings into major cities throughout the country to learn first hand what is happening to small business.

There are several aids which could be offered small business soon. Mr. McMillan proposed that the Federal Trade Commission be directed to earmark certain appropriations for the specific function of keeping an eye on the food industry. I believe there is a good deal of merit in that idea.

I am wondering of legislation paralleling the stockyard and packer's consent decree, which would prohibit a retail firm from going into the processing and producing end of the business, might not help solve some problems.

It has been suggested that the Federal Trade Commission should be given injunctive powers so that a small business would not go under while waiting for its case to come up in court.

Legislation is now pending in Congress to force a seller to make known his price, discount or other terms, to all buyers. This bill is sponsored by the Honorable WRIGHT PATMAN, chairman of the House Small Business Committee.

The key to survival in any battle is to know your enemy. The enemy of the American free enterprise system is monopoly. Monopoly, which would mean the end of our American democracy, of the opportunity for a man to have his own small business, to choose independence, and the right to compete with his intelligence and energy.

This is the enemy we must fight and beat. This is the key to survival—yours and mine, and that of every American.

The Consultant: His Contribution to the Community

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 28, 1959

Mr. SCOTT. Mr. President, Dr. Joseph W. E. Harrisson, director, LeWall and Harrisson Research Laboratories of Philadelphia, Pa., was awarded the Honor Scroll of the American Institute of Chemists on January 6, 1959.

Dr. Harrisson has been national counselor for the American Chemical Society for 20 years. He was the first secretary of the American Board of Clinical Chemistry, Inc. He has served for 40 years as a member of the board of consultants of the bureau of foods of the Pennsylvania Department of Chemistry and for 20 years has been its chairman. Within recent years he has been appointed chairman of constitution and bylaws committee of the U.S. Pharmacopoeia.

I ask unanimous consent to have printed in the Appendix of the RECORD a portion of the paper Dr. Harrisson read before the American Institute of Chemists.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

THE CONSULTANT: HIS CONTRIBUTION TO THE COMMUNITY

(By Dr. Joseph W. E. Harrisson, F.A.I.C., director, LaWall & Harrisson Research Laboratories)

Consultation is, in a measure, both an art and a practice that encompasses many fields of endeavor. But no matter whether a consultant serves in the broad field of chemistry, engineering, or the healing arts, he can open new paths by reason of his unfettered imagination and ability to quicken the interest in problems. Consultants are not necessarily engaged solely in private practice; consultation may be occasional and ancillary to a professional occupation.

For instance, a consultant in the healing arts aids those practitioners of medicine, who are in direct contact with the patient—here the consultant is a specialist, possibly in a phase of medical science that justifies intense study of some limited body function, an anatomical location or pathologic manifestation. Or, if a practitioner of law, he may be a specialist in admiralty law, international law, or corporate law. And, more recently, the food and drug law, because of our rapid advances in these fields. The importance of such a specialized practice is evidenced by the recent formation of the Food Law Institute.

But presently we are concerned with the consultant in the chemical or chemical engineering field. As such, the consultant whether interested in drug, nutritional, or industrial applications, is often the creator, if not the catalyst, of an advance in basic

science or in reducing its application to industrial practice. Or his assignment may be to serve an ailing industry—one which has encountered obstacles along a path that has previously been financially successful. Then, too, he may be called upon to advise whether or not a new process or venture justifies extensive financial support. The scant knowledge that was once acceptable as being sufficient to warrant investment in a new project has been replaced by cautious and critical technological and financial evaluation.

Risk evaluation is now a governing factor whether a project is directed toward the development of an industrial process that may require millions of dollars, months of planning, and years of building, or toward the creation of a fine chemical of potential therapeutic value.

Ventures are no longer job assignments but rather projects—in England, schemes—based upon predictive decisions and rarely dependent solely upon empiric methods or techniques. Yet the empiric approach is still a necessity though costly and wasteful. Methodically and hopefully it is applied even today, as evidenced by our screening of thousands of antibiotic beers—more thousands of chemicals of unknown usage—directed toward seeking a lead among the lower forms of animal life to surcease the ravages of cancer within ourselves.

In our early formative days the chemical industry grew by rule of thumb, and medicine was an art and in truth a practice. Gradually keen minds developed the basic concepts that could be applied in industry, medicine, nutrition, and the many fields of human endeavor. As the 19th century opened its book but few individuals were then capable and fewer were trained in science. No matter what the field of need or the level of their scientific ability when their services were offered to industry, it generally earned for them the scorn of the practical operator. But gradually the sheer need for sound advice created openings based upon the science of the day. Much of this need was supplied by consultants who maintained small laboratories.

THE EARLY CONSULTANTS

Few are aware of the influence consultants exerted and the contributions they made, especially during these early days of our growing industrial expansion. Often these men were respected professors or teachers in the colleges or universities wherein but little was provided in laboratory facilities. Consequently, it was in the private laboratories of these teachers that many students gained their initial and invaluable practical experience. Among these professors was James C. Booth.

Not yet 20 years of age, he went to Germany in 1832, studied under Wohler and Magnus, when it was the custom to take promising students for instruction into the private laboratories of the professors. In 1836 after visiting England and other parts of the Continent, he returned to Philadelphia. Here he opened his own laboratory, observing in his announcement that he was prepared to serve the various industries of the area. Many men who later acquired distinction were trained by Booth in this private laboratory, including John F. Frazier, professor of chemistry at the University of Pennsylvania from 1844–72, and Robert E. Rogers who had a similar post between 1853–77. Booth's laboratory continues today as Booth, Garrett and Blair, one of Philadelphia's oldest institutions and the oldest private laboratory on this continent. Booth's attainments as a chemist were internationally respected and nationally recognized for he was president of the American Chemical Society for three successive terms.

Frederick N. Genth was contemporary with Booth and also professor of chemistry at the University of Pennsylvania. German by birth, he had been a student of Gmellin, Giessen, Kopp, Liebig, and Bunsen. (Somewhat akin as if today a student had studied with Seaborg, Kendall, Saratt, and Du Vigneaud.) Upon emigrating to Philadelphia, which was then the center of the American chemical industry, he likewise opened a laboratory and accepted promising students as assistants. Thus Booth and Genth had a great influence on the University of Pennsylvania and the chemical industry in Philadelphia, and even upon our beloved Edgar Fahs Smith. Actually it was in Genth's laboratory that Edgar Fahs Smith, then an assistant to Genth, became acquainted with J. Lawrence Smith, probably the first outstanding organic chemist of the United States. These men were creative contributors to the surge of knowledge in their fields during the formative years of our chemical industry. Genth was also president of the ACS as was also Edgar Fahs Smith who, like Booth, served as president of the ACS for 3 years.

Fifty years after Booth, the American chemical industry had expanded greatly and Philadelphia was no longer the sole center of activity. Consultants were available in many areas: In Philadelphia, Henry Leffmann, later to become Leffman & LaWall, predecessors of LaWall & Harrisson; also, Samuel P. Sadtler, now Samuel P. Sadtler & Son; in Chicago, Carl Miner, who enjoyed an enviable reputation as the Miner Laboratories; in San Francisco, Albert Hanks; and in Boston, what has become the giant of independent consulting organizations—Griffin & Little of Milk Street, predecessors of Arthur D. Little, Inc. This latter group is now the outstanding independent research organization in the world, serving not only individual and corporate clients, but nations as well.

Consulting practice has now become extensive throughout the United States and it is estimated that more than 6,000 scientists are engaged in the numerous private professional organizations. Some organizations have complements in excess of 100 or more scientists; many are smaller, and some consultants practice as individuals.

Numerous organizations have been formed to establish collaboration between consultants, advance the practice of consultation and maintain a sound ethical background. Among these are the American Council of Independent Laboratories and the Association of Consulting Chemists and Chemical Engineers; as well as associations of consultants in related fields such as the professional engineers and the professional biologists.

But let us turn the pages back a bit, to Franklin Square, one of the four public squares in William Penn's plan of Philadelphia. There in a little pharmacy (still existent today) dispensing to the needs of his neighbors, worked a pharmacist-chemist, Hermann Frasch. In this green velvet spot, then centered among much of the chemical and pharmaceutical activity of Philadelphia, and brewing too, Frasch also practiced as a consultant. From behind his demure prescription counter and off the clay-bottomed cellar floor, he developed the wisdom, experience, imagination and the fumes of fancy that set the scene for his many contributions to our progress. Here was fired the intellect that made deep mining of sulfur in Louisiana, Texas, and Mexico possible, and cheap sulfuric acid a practicality. Much of today's chemical industry rests upon his work as does much of the petrochemical industry, for he was, until his death, active in the field. Hermann Frasch gained much of his ability by the experiences of a miscellany of puzzling problems in the local industries.

It can be truly said that fertile minds are incited, kindled, and quickened by challenge and use. That a pharmacist-chemist should, in the course of his work, have made outstanding contributions, was not unusual. Karl Wilhelm Scheele, in his Swedish apothecary, unfolded much about the organic acids, and Martin Heinrich Klaproth laid the first basis for today's atomic age with his separations of uranium, strontium, cerium, and other metals. In fact, Klaproth, trained in his father's German apotheke, was the first professor of chemistry at the University of Berlin (1809). Even today he is recognized by many as the father of analytical chemistry. Klaproth became known for the care exercised in his work, his detailed reporting of both results and methods, and careful checking before publishing—qualities to be admired today. These men are justly mentioned, because though they were trained in one field, they passed into another and therein made useful and outstanding contributions.

THE SATISFACTION OF SERVICE

But the most rewarding return to any practitioner of a science is neither personal success nor scientific acclaim. It is the feeling of satisfaction that develops in public or personal service. Herein the chemist, the biochemist, and the chemical engineer, whether he be a captive employee as we sometimes refer to those in industry, a teacher, or in private practice, has the opportunity and obligation to contribute fairly of his training and experience to the welfare of the community; also to stimulate those individuals who are students in the field. There is a challenge in our rapid industrialization and threatened overpopulation that brings into a critical area—pure water, adequate living facilities, nutrition, sanitation, food protection, and even sufficient clean air. How well and how economically these challenges are met in the future will be influenced by sound unbiased reasoning to which we as scientifically trained citizens can contribute a healthy atmosphere. Many areas seek new industries and look to the expansion of those they have, but they must maintain adequate natural resources and clean environments. Herein lies an opportunity for service.

As an illustration of what may be done in public service, our organization for more than one-half century has been privileged to act as consultants to the Bureau of Foods and Chemistry, Pennsylvania Department of Agriculture. To this agency is charged the responsibility of maintaining the integrity of food within the Commonwealth of Pennsylvania, which is one of the few States that has long been noted for its high standards in this respect. This has often been a position difficult to maintain, in view of the many new arts of sophistication. My personal pleasure at having served in this consulting capacity for 40 years has been most rewarding.

The professional practice of consulting brings its rewards in its creative contributions toward new comforts for man or advances in industry; in seeing visions carried to fruition; in the many personal and scientific contacts that it develops; in the amazing and often amusing incidents that unexpectedly occur. All of these are bound to be tinged with a degree of gladness or sadness when success or failure of a venture gradually unfolds.

While today the practice of an individual professional consultant may be limited to some specialty in which the individual is particularly adept, conclusions are often

flavored and guided by others in the field or perchance in related fields. The professional consultant is indeed wisest when he accepts and seeks the advice of others. So, to effectively serve his client, he may draw upon the knowledge or experience of other privately practicing consultants or those upon the research and teaching staffs of our universities or colleges. Culmination of a venture may, therefore, represent the collaboration of men in several of the basic sciences. Their thoughts are welded together by an imaginative coordinator. In a sense, the professional consultant is the project director, building upon facts and educated intuition an answer to the problem under consideration. While in practice a consultant may serve industry by collaborating with its executive officers, he may serve best by contact with its research staff. Often this latter approach develops during a highly specialized or technical problem. Consequently, the opinions and activities of two somewhat divergent viewpoints, i.e., that of the consultant and that of the industrial organization, complement one another.

Nor does the consultant of today play any lesser part in offering an opportunity to the recent graduate, for such an association still remains a privilege and in it there is to be had a wealth of otherwise often unattainable training and experience.

Nor should individual practice be neglected by staff members of a university or college. Such opportunities should, in fact, be sought. It is true that they often serve to increase the insufficient income of the teaching profession but this should not be the measure of their value. More important, they maintain and develop a challenge, the spirit of which is conveyed by the educator to his students. Such service when rendered within the amenities of an educator's tax-favored position, and not made dependent upon the prestige of the institution, presents no unfair disadvantage to the private consultant. But surely, the chief responsibility of great teachers is not to applied research or to consultation but rather to kindle enthusiasm in the minds of their students, to spark the visions of dreams to come true.

PROFESSIONAL FREEDOM

Freedom of thought should be typical of the consultant and the teacher. By such freedom our scientific advance and our industrial strength has been sparked. Restrictions that tend to narrow a field of science tend to stifle contributions. Minds trained in one field can become great in another field only so long as we maintain freedom of action and thought.

Today opportunities for professional practice, in chemistry, biochemistry, chemical engineering or other phases of chemistry, are more creative than ever. This is equally true for the consultant who may practice individually or for those who practice jointly with others as an organized group. The consultant and his staff continues to be an intimate part of American progress. To best serve his clients he must maintain their confidence—wisely, and with careful consideration of society as a whole. Only so long as a consultant maintains his integrity and freedom of action, while preserving the rights of both the public and his client, will his professional status be maintained. He can be characterized as a homogenate of layman and scientist with a striking degree of imagination, burning energy, and a degree of courage—the latter quality often required to be applied to other people's moneys.

U.S. Strength Should Give Us Confidence

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. BRAY. Mr. Speaker, under leave to extend my remarks, I wish to insert the following editorial from the July 26 issue of the Indianapolis Star:

THE POSITION OF STRENGTH

There is circulating in Washington a document which, for a change, draws a power comparison with Soviet Russia which is favorable to the United States. It is not, to be sure, an official document. It was drafted privately by a group of military officers whom Newsweek magazine identifies merely as "high ranking."

The document was drawn up in response to a grapevine report that State Department advisers were urging Secretary Christian Herter to yield the Berlin issue to the Russians on the grounds that the United States is declining in power. The document suggested that Americans try to imagine what it would be like if the tables were turned—if the power of the United States were held instead by Russia, and the strength of America were only as great as Russia's.

Here are some of the examples used. If the tables were turned, and Russia had our power, she would have four or five times as many intercontinental jet bombers as the United States has. There would be more than 2,000 modern Soviet fighters, bombers, and missiles at bases in Mexico and the Caribbean Sea. Potent Russian naval forces would be almost always to be found a few hundred miles off the American coasts. As for internal strength, there would be only a single railroad linking the east and west coasts. Half the Nation's labor force would be needed just to operate the farms instead of only 12 percent and there still wouldn't be enough food.

But this is not the way it is. It's the other way around. It is Russia which faces superior striking power, based within easy reach of its borders. It is Russia which still struggle under the handicaps of an economy which is not just years but generations behind.

In the matter of missile progress, the chief basis of the scare philosophy about Russian strength, this document says that the "missile gap" is deduced from the error of comparing what Russia could produce with what the United States will produce. In this field, too, the authors of the document find the American position the more favorable. From another source comes a recent book, "Russia and the Big Red Lie," by Lloyd Mallan who last year spent 2 months in Russia, interviewing 32 scientists and bringing back some 6,000 photographs. Among his conclusions are that "lunik" was a hoax and that Russia does not have a single operating intercontinental ballistic missile.

The Washington document presents in detail two fundamental points which seem usually to be forgotten when Russia's strength is discussed. These are the very great lag in the Russian economy, and the great geographic superiority of the American military position.

Russian strength, belligerency and ambition should be clearly understood and respected. Americans—particularly high government officials—should never for a moment lose sight of the possibility that a war could be precipitated by a mistake in judgment or a hasty action. But the American position is one of strength. There is no reason to be frightened of Russia, to back off in panic from Russian threats. America has the advantage not only of strength but also of moral right. These advantages should be exploited in full.

The Road to Ruin: Inflation

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Winnsboro News and Herald, Winnsboro, S.C., of July 23, 1959.

THE ROAD TO RUIN: INFLATION

Barring a nuclear war, which seems to become daily less attractive for all concerned, inflation is the greatest single problem which this country has to face. It can destroy the value of life insurance policies, savings, securities, and the dollar. It can wipe out the means of existence for people on fixed incomes, paralyze production and trade, and bring both political and economic collapse to the country.

Its primary cause is a government that has become far too big and wasteful and spends more than its income. One of the chief misconceptions upon which big government has been built is the idea that somebody else can be made to pay for its multifarious growth, often in direct competition with its own citizens. But in the long run, every individual in the country pays the bill as the dollars he owns become worthless. He pays the bill in taxes—not only his own but those charged to business enterprise as well.

Corporations are merely tax collectors for government. They must add the tax levied against them to the prices of the products which they sell, or go out of business. The significance of this was pointed out recently by the president of a leading southwestern electric company when he said: "* * * if we were to operate on a tax-exempt basis as public power does, we could reduce our rates 27 percent without affecting the net income of the company or the people who put up the funds to operate our company. Of course, the remaining taxpayers would have to make up the taxes we now collect. If people could be made to realize that taxes must, of necessity, be paid by the ultimate consumer, I believe that there would be more attention given to governmental expenditures especially by the Federal Government."

Only the individual can pay the bill for big government, and unless its spending is curbed the final installment paid by the individual will be his freedom. As the News and Herald has observed, once or twice before, governmental expenditures, on the town, county, and State levels, should be subjected to the closest scrutiny, also. Economy, like charity, begins at home.

Will Dairying Change?

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to include an editorial that appeared in the July 16, 1959, issue of the Snohomish County Tribune, a weekly newspaper published at Snohomish, Wash. For many years the dairy farmers in my district and the Nation have been faced with falling prices of milk and with continuously increasing costs.

Some means must be used to find a solution to these problems. Perhaps the dairymen of Snohomish County can show the way to solving these problems.

The editorial follows:

BIG CHANGES COMING IN DAIRYING

It doesn't take a very attentive observer to notice the rumbling and stirring that is taking place in the dairy field. The signs point toward big changes, and quite soon we judge, in the methods of marketing and selling milk. These changes will affect all dairymen in this area and they probably will affect everyone in Snohomish, too, whether they are farmers or not.

It is no secret that the regional dairy cooperatives which presently are manufacturing and distributing dairy products under the "Darigold" label are doing some serious thinking about consolidation. These are such cooperatives as the Snohomish, Skagit, Whatcom, and Lewis-Pacific Dairymen's Associations. In Snohomish County, over three-quarters of the producing dairymen are members of the Snohomish County Dairymen's Association. They employ several hundred people and own equipment valued in the millions. When organizations of this size, whose operations penetrate to the heart of their communities, discuss merger, it is a subject of deep interest to everyone.

Why merge? The farmer's greatest weakness has been his inability to control his market. To set his price, maintain it, and increase it to the point where it yields him a decent return. This is especially true of the dairyman, whose love of independence has been his greatest weakness, at least in the marketplace. The manufacturer sets his price and keeps it there through mutual agreement with other manufacturers or through fair trade laws. The labor union enforces its demands for pay scales with a number of potent weapons, including the strike, the union shop, and others. But the farmer goes his independent way, at the mercy of middleman, retailer, and the consuming public.

The cooperative, such as the one in Snohomish County, has been the dairyman's favorite method of overcoming his handicap. A membership in a cooperative gives him a share and a voice in production, processing, distribution, and sale of his produce, milk, cheese, butter, and ice cream. In numbers there is strength and, until now anyway, the Puget Sound area co-ops have been able to do an outstanding job for their members. But the talk of consolidation indicates there is reason to believe that a larger cooperative organization, embracing most of the Puget Sound milk region, would do an even better job. The more efficient use of production and distribution facilities, it has been stated, would bring a greater return to the farmer.

With consolidation, of course, would come a corresponding loss in identity that the dairyman now shares with his smaller cooperative group. What the dairyman has to decide is whether this loss in close identity with the organization will be compensated for by more money and other advantages.

If consolidation is coming, it probably will occur in the next few years. These are shaping up to be the critical years; the one when the smaller dairyman will either find the answers to his problems or be forced to give way to the large-scale operators. It almost goes without saying that consolidation would be felt, in one way or another, in Snohomish, as well as other dairy communities in the State.

Another factor in the discussions concerning merger of cooperatives is the growth of competition from the so-called cow pools or cow factories. These are privately operated enterprise where one operator or corporation performs the milking, processing, bottling, and selling at the retail level. Everything is done on a large scale, with efficiencies in operation and the elimination of the middleman suposed to enable the owner to sell for less and make more money doing it.

California dairymen took the lead in this development and, just recently, the idea took root in Washington State. The independent producers and cooperatives, alike, are eyeing this turn of events with great interest and, perhaps, some apprehension.

Floyd McKennon's large operation between Snohomish and Monroe is the foremost example of the successful cow factory. McKennon has developed a 700-cow herd, owns processing plant and bottling works, and ships to a series of milk barns in the Seattle area (he owns these) and sells milk by the half gallon for 39 cents, considerably under the average market price. He has over a thousand acres of prime grassland. These fields furnish him with feed for the huge herd and make him about as independent of outside help as any dairyman can be.

Mr. McKennon's revolutionary and apparently highly successful methods have had their impact on Northwest dairymen. If they do not actually cause consolidation, they certainly will be a factor in consolidation being given careful consideration.

So, we shouldn't be too surprised when some rather drastic changes take place in dairying. After all, some big changes already have taken place.

Captive Phrase

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I include an editorial, "Captive Phrase," appearing in the Boston Herald of July 25, 1959.

As the editorial, in part, well said:

Khrushchev and his colleagues are more worried than they let on about the restlessness of the satellite peoples.

The editorial follows:

CAPTIVE PHRASE

The idea of an official Captive Nations Week left us rather cold at first.

Everyone is sympathetic toward the small nations engulfed by communism. Most of them were once democratic countries, but they had no freedom to choose when the Reds took over, and they have no freedom to choose now. Americans with relatives in the captive states feel particularly strong about them.

But does it help, we asked, to announce one's sympathy and then do nothing to back it up? Did our liberation talk not actually harm the East German and Hungarian rebels who took up arms in the mistaken belief America would come to their aid?

Our attitude has been changed, however, by the official reaction of the Soviets to the President's proclamation of Captive Nations Week.

The sharp attacks on Mr. Eisenhower in the Soviet press and the repeated angry references to the captive nations issue by Premier Khrushchev, even in his face-to-face talks with Vice President NIXON, indicate that this is a tremendously sore subject with the Reds. Nor can it be put down to pride alone.

The Red party boss is far too hardened a campaigner to be disturbed by routine Western criticisms. He expects brickbats from the capitalist countries just as we expect them from the Reds.

But this goes deeper. Khrushchev and his colleagues are more worried than they let on about the restlessness of the satellite peoples. The phrase "captive" hurts in Kremlin ears because it rings true in the ear of Budapest and East Berlin and all the other east European capitals. We have gotten hold of a phrase that has revolutionary appeal—and for the Russians it is the wrong kind of revolution.

The Kremlin's wordy reaction to Captive Nations Week is not only giving the observance publicity, but it is also giving it meaning. It is proving that a phrase can be an effective weapon, too.

A Memorial for James Madison, the Father of Our Constitution

EXTENSION OF REMARKS
OF
HON. ROBERT W. KASTENMEIER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. KASTENMEIER. Mr. Speaker, a growing number of newspapers and distinguished scholars and authors have offered their wholehearted support for a memorial for James Madison, the Father of our Constitution. They have written letters to the editor of the Washington Post and Times Herald, which initiated the long overdue tribute to our fourth President, in support of the proposal. Following are letters to the editor of the Washington Post and Times Herald and an editorial which appeared in a recent issue of the San Francisco Chronicle:

[July 12, 1959]

A SHRINE FOR A FOUNDER

Irving Brant, whose biography of James Madison is itself one of the enduring monuments of our age, has proposed that the Nation erect a monument, memorial, or national shrine in honor of Madison, architect of the Constitution and Bill of Rights. In your issue of June 28, you endorsed Mr. Brant's suggestion and invited readers to comment on it.

It is evident that a suitable monument in the District of Columbia would have great educational value, particularly for the visitors, young and old, who come from all over the country to witness and learn the operating principles of a free republican government.

Madison does not need and can scarcely gain from any monument we may build. It is our own citizenry, present and future, who will gain most from seeing a tangible symbol of our gratitude to him and our dedication to the principles he served so ably.

There is another consideration worth mentioning. A Madison monument would announce to the world that America respects intelligence, education, culture, and spiritual refinement. These were among Madison's qualities, and we need to proclaim that as they informed our beginnings, they remain our abiding national ideals.

EDMOND CAHN,
Professor of Law, New York University.
NEW YORK.

(The author of "The Moral Decision," Dr. Cahn also edited "The Supreme Court and Supreme Law.")

I think Irving Brant's suggestion for a Madison memorial is an excellent one. If we have been remiss all these years in honoring the Father of the Constitution—and our most perceptive political theorist—we now truly have a golden opportunity to remedy this neglect.

We certainly owe Madison more than we have hitherto publicly acknowledged. A suitable public memorial would be a wonderful way of reemphasizing Madison's great contribution, in thought and in action, to the American Nation. Today, more than ever we need to be reminded of the great generation of southern leaders who were Americans first and southerners second.

Madison's dedication to union, to republicanism, to federalism, to our basic freedoms, to majority rule, and to prudent statesmanship need to be emphasized and reemphasized.

A memorial to him would not simply honor the man, but the vital and viable principles that underlie the American experiment in democratic government.

NEAL RIEMER,
Associate Professor of Political Science, Penn State College.
UNIVERSITY PARK, PA.

James Madison once wrote a correspondent, "The hand that writes this letter, wrote the Constitution." Something of an exaggeration, perhaps, but by no means a baseless claim.

Turning to the index of Max Farrand's "Records of the Federal Convention of 1787," one finds that the references to Madison's name occupy more than four columns, while those to the nearest runners-up, Mason, Morris, Rutledge, Sherman and Wilson, occupy less than three columns each. And Farrand's "Records" makes, of course, no reference to the Bill of Rights.

Much is therefore to be said for Irving Brant's suggestion. However, can we stop with Madison? Is my old friend John Marshall properly memorialized at the seat of Government? Then, of course, there are two or three generals who have been neglected, and perhaps a President or two.

Yet on the whole I favor Mr. Brant's suggestion for a special memorial to James Madison.

EDWARD S. CORWIN,
Emeritus Professor of Politics, Princeton University.
PRINCETON, N.J.

(Dr. Corwin's many distinguished books on constitutional law include, "The Constitution and What It Means Today," a standard work on the subject.)

[July 14, 1959]

HONORING MADISON

I have noted with interest the recent discussion concerning a memorial for James Madison. I wholeheartedly agree that this outstanding patriot deserves fuller recognition for his role in building the foundations of our freedom.

Madison, scholarly and judicious, buttressed the views shared by his more outspoken colleagues with careful reasoning and extensive knowledge.

From his youth he was concerned for individual liberty. At the age of 25, while a delegate to the Virginia Constitutional Convention, he fought for a clause in the Virginia Bill of Rights allowing the "free exercise of religion." Thirteen years later he told the first Congress of the United States that it should "expressly declare the great rights of mankind secured under this Constitution." The amendments which he thereupon introduced became the Bill of Rights for the Nation.

Throughout the formulation of our Constitution and the establishment of our Federal Government, Madison played a quiet but leading role.

While a delegate to the Continental Congress he clearly saw the need for a stronger central government, subsequently sought to convince his State Assembly in Virginia of this fact.

At the Constitutional Convention in Philadelphia, the "Virginia Plan" authored by Madison, became the foundation for the structure of Government which was adopted. Then in the fight for ratification, the Federalist Papers which he joined in writing provided solid, carefully reasoned arguments for the proposed new Government.

Having devoted himself to the establishment of a strong Federal Government, Madison became a member of the first Congress and took a leading role in the organization of the Government and the creation of the executive departments. It was at this time that he introduced the Bill of Rights.

Madison's service to his country continued, as he was selected by Jefferson to be Secretary of State, and then elected by the Nation to be its fourth President. The lifetime of service which James Madison gave to the establishment of democracy and the protection of the rights of mankind has gained for him the highest respect of all who are continuing the fight to guarantee the freedom and rights of the individual.

THOMAS C. HENNINGS, Jr.,
Senator From Missouri.
WASHINGTON.

(Senator Hennings is chairman of the Senate Constitutional Rights Subcommittee.)

[July 24, 1959]

PROPOSAL SECONDED

May I add another seconding vote to Irving Brant's admirable proposal for a memorial in Washington to James Madison, Father of the Constitution.

If the columns lately removed from the Capitol could be so utilized as to identify them firmly in the public mind, not as a group of discarded columns, but with the work of Madison as the key pillar of our thus far remarkably durable political structure, then no other monument, and no other use of the columns, could be more appropriate.

Surely the creation of some suitable monument to Madison is long overdue. Mr. Brant rightly points out, however, that it is we, not Madison, who need that monument.

FRANCIS L. BERKELEY, Jr.,
University of Virginia.
CHARLOTTESVILLE.

[July 19, 1959]

PILLAR OF FREEDOM

I was delighted with the suggestion of Irving Brant that the columns lately removed from the front of the Capitol be used in the construction of a memorial to James Madison. The suggestion appeals because Madison was himself a kind of pillar of our constitutional system which the Capitol with its impressive columns symbolizes.

If this particular set of columns must go to make way for additional space inside the building, it would be a happy expedient to use them to honor the man who helped make the Capitol worthwhile.

His services as a member of the Constitution Convention and the recorder of many of its proceedings, as an author of The Federalist and advocate generally of the adoption of the Constitution, as a Member of Congress implementing the written Constitution and drafting the first 10 amendments, and as a profound thinker in the field of democratic government, place him with Washington and Jefferson, and other statesmen whom we memorialize in the Capital City.

If some of his other offices, including the Presidency, brought him no added glory, the moderation of his distinction there should not be permitted to obscure his greatness as here revealed. Today, for visitors to Washington, there is a hiatus in our gallery of statesmen. That hiatus can be ended by the suggested use of the columns from the Capitol.

CARL B. SWISHER,
Professor of Political Science, the Johns Hopkins University.
BALTIMORE.

(The president-elect of the American Political Science Association, Dr. Swisher is the author of American Constitutional Development, and a standard biography of Chief Justice Roger Brooke Taney.)

I wish to endorse most heartily Irving Brant's proposal that James Madison be honored with a memorial made of the columns that once graced the East Front of the Capitol. Madison's contribution to the framing of the Constitution alone would deserve some such recognition from the country which has profited immeasureably from "the rich resources of his luminous and discriminating mind."

Mr. Brant not only has illuminated the life of a great man with his scholarly volumes but has reminded us of a debt long overdue.

JOHN WELLS DAVIDSON.
CHEVY CHASE.

(The author is associate editor of a projected new edition of the public papers of Woodrow Wilson.)

[July 24, 1959]

PHILOSOPHER OF LIBERTY

Irving Brant's proposal of a memorial to James Madison is long overdue. Most students of American history would have greeted his suggestion with enthusiastic approval even before his multivolumned biography conclusively reinforced it. Madison deserves a place among our Nation's builders along with Washington, Jefferson, Marshall, and Hamilton.

Better perhaps than any one of them, Madison grasped the complex essence of free government and labored long and hard toward its implementation. As a systematic thinker, deeply grounded in history and political theory, he surpasses his eminent contemporaries.

For him, man is neither inherently good nor inherently bad. Just as man's capacity for justice makes free government possible, so man's capacity for injustice makes free government necessary. The main purpose, he said, is to defend "liberty against power, power against licentiousness and * * * (to keep) every portion of power within its proper limits."

Madison's basic philosophy of balance is somewhat at odds with Jefferson's major emphasis on limited government responsive to the popular will, as well as with Hamil-

ton's bias toward consolidated coercive power in the National Government. More flexible than most of his contemporaries, history has added to his claim, widely recognized during the formative period, to be identified as Father of the Constitution.

ALPHEUS T. MASON,
Professor of Politics, Princeton University.

BOULDER, COLO.

(In addition to major biographies of Justice Louis Brandeis and Chief Justice Harlan Fiske Stone, Dr. Mason is the author of "American Constitutional Law."

[From the San Francisco (Calif.) Chronicle, July 12, 1959]

FORGOTTEN FOUNDING FATHER

What of Madison—James Madison, fourth President of the United States?

Why has his extremely imposing figure faded in the memory of Americans who owe him so much? Why have his great and enduring contributions to constitutional government been so long ignored that he is rightly called "the most unhonored and unsung of the Founding Fathers"?

These questions have lately been raised in Washington—the National Capital so named, incidentally, at Madison's suggestion—with the excessively tardy proposal that a due and fitting Madison memorial be authorized and set up.

It is unthinkable that such a figure in American history should longer remain neglected, that there be no monument to him in Washington, that his home—still standing in Virginia—should not acquire the status of Mt. Vernon and Monticello.

For James Madison was truly the Father of the Constitution. He drafted much of it; he fought for its adoption; he successfully beat down the considerable opposition of such as Patrick Henry, James Monroe, and John Tyler when it was up for ratification in Virginia.

Of intimate and direct concern to Americans today, James Madison likewise wrote 9 of the 10 amendments that protect individual liberties and are known as the Bill of Rights.

Along the way, he—with Alexander Hamilton and John Jay—wrote the brilliant constitutional studies known as the Federalist papers.

Irving Brant, biographer of Madison, has most aptly suggested that 24 columns removed during recent renovation of the Capitol might be fashioned into a Madison memorial of beauty and dignity to stand with the Washington and Jefferson and Lincoln memorials.

There should be no delay in furthering such a project. James Madison has been too long neglected. As Irving Brant has put it: "We should erect a memorial to Madison, not because he needs it, but because we do."

Butler Should Resign

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chester News, Chester, S.C., of July 23, 1959:

BUTLER SHOULD RESIGN

The Chairman of the Democratic National Committee has caused so much division and strife within the national party that only his resignation can give the party its maximum chance in 1960. Of course, the leftwingers in the party will not agree with this analysis, but it is an accurate one.

Butler, and some of those who are working with him, believe that if the leftwingers drive the conservatives out of the party, they can still win a Presidential election. Already the statements Butler has made, about his own party's leadership in Congress, and about the South and Southwest, insure a split in the party and a possible walkout at the Democratic convention in Los Angeles. For the good of the party, the only thing he can do is resign.

There is a strong suspicion in Washington, among some that Butler is the greatest ally the Republicans have. If he is left in charge of the Democratic National Committee, and his tactics win out, he will split the party and bring about the election of a Republican in 1960. This may be the purpose of some of those who are supporting him, although this would never be admitted.

The National Committee has been carefully stacked over recent years to support Butler. Therefore, at a showdown scheduled for September the National Committee may stick with the Indiana chairman. If it does, it will be the greatest boost for Republicans which has occurred since 1956. If Butler is ousted, and the Democratic Party remains unified, it has a better than 50–50 chance to elect its candidate as President in 1960.

Russia Versus United States: How Armies Compare

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from U.S. News & World Report of August 3, 1959:

RUSSIA VERSUS UNITED STATES: HOW ARMIES COMPARE—NEW LIGHT IS SHED ON WHAT RUSSIA IS DOING TO MODERNIZE HER VAST ARMY—FROM U.S. ARMY INTELLIGENCE, PASSED ON TO CONGRESS AT CLOSED-DOOR SESSIONS, COMES WORD ON THE LATEST ROUND OF SOVIET TANKS, GUNS, COMBAT GEAR

Out of testimony before Congress by top U.S. Army officials comes this new appraisal of the Russian Army:

RED TANKS: LONGER RANGE

Gen. L. L. Lemnitzer, the Army's new Chief of Staff, told a Senate committee this in testimony just released:

Question: "Is it true that Soviet tanks have a far greater range than our tanks?"

General Lemnitzer: "Yes, sir; that is true."

Question: "We have 105-millimeter [guns] on our heavy tanks, have we not?"

General Lemnitzer: "That will be the weapon with which the M–60 [heavy tank] is equipped."

Question: "The Russians already have 120-millimeter [guns] on their heavy tanks, have they not?"

General Lemnitzer: "That is correct."

Question: "What we have gotten down to now is that the Soviets have 175 divisions; we and our allies have 21½ divisions in central Europe; and their tanks outrange and outgun us. Is that correct?"

General Lemnitzer: "Their present tanks do; yes, sir."

NEW ARMS: A SECOND ROUND

Brig. Gen. L. J. Lincoln, a U.S. Army logistics chief, then told this about Russia's "modernization" program—

"Information at our disposal indicates that the Soviet ground forces have been completely moderized since the end of World War II. * * * In quantity, they exceed our assets by a margin of about 5 to 1 * * *

"Such major Russian items as medium and heavy tanks, armored personnel carriers, trucks, and rocket launchers are now in the second round of modernization."

MOBILITY, FIREPOWER: UP

A U.S. Army report on "The Soviet Army," just made available to Congress, adds these details—

"Soviet ground forces [now show] a great improvement in mobility and firepower. Armored personnel carriers are now in mass use; amphibious vehicles have appeared in large numbers; helicopters are now widely employed.

"The Soviet Army arsenal features a new artillery system including field artillery, rockets, ballistic missiles of all ranges, and antiaircraft weapons of impressive mobility and effectiveness. * * *

"The importance of armor-protected firepower on the nuclear battlefield has been recognized, and has resulted in the production of new amphibious, medium and heavy tanks. Electronic equipment has been greatly improved, and modern communications equipment is in wide use throughout the ground forces."

SECRETARY'S SIZE-UP

Army Secretary Wilber M. Brucker concludes that—

"There is no doubt about the fact that the Russians have been modernizing their army. There is no doubt about the fact that they have been improving their tanks and their guns, that they have been given missiles that fire at great distances that I don't want to mention here, and many other classified [secret] items of equipment."

The Wolf Is Here

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lancaster News, Lancaster, S.C., of July 23, 1959:

OFF THE RECORD

The wolf is here: Are American cotton manufacturers merely crying wolf when they claim their industry faces ruin if this Government continues its policy of encouraging and subsidizing foreign competition at the expense of domestic mills?

Obviously, the administration in Washington thinks so. In just a few days the 6-cent subsidy on American cotton to foreign manufacturers will be increased to 8 cents

per pound. That is 8 cents less than American mills can buy this same cotton here at home. Add to that the tariff concessions, foreign aid support, and low wage levels enjoyed by foreign manufacturers competing for the American markets and future bankruptcy is not only predictable, it is inevitable.

The story of cotton textile manufacturing in Great Britain is dismal proof of this conclusion. Last April the British Government took the unusual action of allocating $84 million in public funds to the Lancashire mills in a last-ditch effort to keep them from going out of business. The money will be used to scrap some obsolete factories and modernize others.

What brought the British cotton manufacturers to the brink of bankruptcy? The causes, outlined in the May 2 issue of the Economist, are essentially the same as those influences now sapping the strength of American manufacturers.

"Lancashire's claim (for public funds)," says the Economist, "rests on two broad grounds. It contends that in both the home and export markets it is the victim of forces largely beyond its control. Since the Second World War its oversea markets have continued to shrink as they did after the First World War, owing to the growth of local industries behind tariff walls in countries that once were Lancashire's exclusive markets.

"These countries have not only become self-sufficient in textiles, but have also become substantial exporters, again at Lancashire's expense. And in recent years the industries in India and Hong Kong have been competing with Lancashire in the British market, which allows commonwealth goods in duty free.

"No other major manufacturing industry stands unprotected against low-wage competition from Asian countries. And as the Government has refused Lancashire formal protection on grounds of broad national and commonwealth policy, the industry argues that the Government must bear some part of the consequences."

Following the Second World War the United States also adopted a similar broad national and commonwealth policy in regard to Japan, the Philippines, India, and other most-favored nations. They were encouraged and assisted in developing their textile industries. Tariffs were scaled down to give them American markets. A deaf ear was turned to the cries of distress from American mills. The cotton textile industry, it would seem, had become expendable in the game of international politics.

In 1958 alone there were 118 mill closings in Lancashire as a result of the British policy. This has been matched in the last 3 years by scores of closings in the United States. American manufacturers have never sought public funds to aid them in this battle for survival. They have only asked, and are still asking, that some measure of protection be given them before they are engulfed by low-wage, subsidized competition from abroad.

Panama Economy Is Held Declining

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the New York Times of July 27, 1959, written by Kathleen McLaughlin.

[From the New York Times, July 27, 1959]

PANAMA ECONOMY IS HELD DECLINING—LATIN AGENCY'S REPORT CITES NEED FOR STRONG MOVES TO BOLSTER REPUBLIC

(By Kathleen McLaughlin)

UNITED NATIONS, N.Y., July 26.—Short of stringent governmental measures, the economy of Panama is likely to decline in the next decade. This is the major conclusion reached by the Economic Commission for Latin America after a 2-year analysis.

Under the most favorable conditions implied by maximum adaptation of the changes outlined, the forecast is modified to indicate modest but important advances. Salient factors would be a reasonable, even if not adequate 2 percent rise in general living standards, and an increase of nearly 5 percent a year in total private consumption, accompanying a population increase of 2.9 percent a year.

Realization of these goals, the report said, would require "efforts which might appear excessive even from a strictly economic viewpoint." They were projected to meet the unusual fundamental characteristics of the country's economic structure, including a rigid monetary system, a limited market, and the impact of the integrated Canal Zone with its self-sufficient aspects.

ECONOMIC ROLLER COASTER

In the last 15 years, the survey noted, the pressure of events has kept the country on an economic roller coaster. Extraordinary boom conditions of the war years carried through to 1947. They were followed by deflation of the abnormal external demand for Panama's goods and services, with the trough of the depression occurring between 1949 and 1951, and an ensuing rapid upward recovery to 1953. Thereafter the pace quickened to 1956, the last year for which statistics were checked.

Between 1939 and 1945 Panama prospered on the influx of visitors, especially naval and merchant ship crews in its Canal Zone, who totaled 1 million a year.

But by 1947 the visitors had declined to 38,000 a year for naval crews, and to 200,000 for merchant crews. Their expenditures diminished by two-thirds.

RESOLUTE POLICY

Between these intervals of prosperity and of tight conditions, the Government's policy of fostering domestic expansion of basic capital, which had been matters of emergency, shifted to the aspect of a "resolute policy directed toward the country's internal economic development," the survey stated. It has continued in operation to the present.

Problems that have of necessity accelerated the pace of this movement are varied and difficult, the researchers conceded. The key obstacles are exchange parity between the balboa and the dollar, used in the Canal Zone for wages of U.S. personnel, for services and for imports; the long underutilized capacity of the rural areas; the absence of basic social capital; lack of incentive for private investment; inadequate roads and communications; and insufficient capacity to import and a minority of exports capable of competing on the international market.

In its asset column, Panama possesses an estimated 5,400,000 acres of arable land, of which only 44 percent is being used.

POWER CAPACITY UNUSED

Installed capacity of electric power stations has been used, at best, only to 32.4 percent, emphasizing the situation in this sector of the economy.

For years, until recently, the "campesinos" or peasants in the hinterland of Panama were frustrated in reaching their natural market outlets in the country by the disrepair of the roads and highways, 50 percent of which were impassable to motor vehicles for a good part of each year. Since 1953 a vigorous construction and renovation program, stimulated by a $5,900,000 loan from the World Bank, has materially improved traffic mobility and set off a mounting surge of agricultural development in areas once practically inaccessible.

Increased Incentives for Private Giving Through the Allowance of a Tax Credit for Charitable Contributions to Institutions of Higher Education Urged by Leading Educational Organizations

EXTENSION OF REMARKS

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. McDOWELL. Mr. Speaker, I include here an excerpt from the speech by Dr. C. C. Furnas, chancellor of the University of Buffalo, at the 43d annual meeting of the American College Public Relations Association which was held this year at French Lick, Ind., July 13, 1959.

Dr. Furnas at that time urged increased incentives for private giving to institutions of higher education through the allowance of a tax credit. I have introduced a bill, H.R. 8356, to give $1 of tax credit for each $1 contributed to higher education. The tax credit method of financing higher education is rapidly garnering support from national organizations concerned with advancing American education.

I include here the text of my bill, H.R. 8356, as well as a major portion of the speech by Dr. C. C. Furnas who is, also, a member of the New York State Council on Higher Education.

H.R. 8356

A bill to amend the Internal Revenue Code of 1954 to provide funds for educational purposes by providing increased incentives for private giving through the allowance of a tax credit for charitable contributions to institutions of higher education

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) part IV of subchapter A of chapter 1 of the Internal Revenue Code of 1954 (relating to credits against tax) is amended by adding at the end thereof the following new section:

"SEC. 39. Credit for charitable contributions to institutions of higher education.

"(a) ALLOWANCE OF CREDIT.—At the election of the taxpayer there shall be allowed as a credit against the tax imposed by this chapter (subject to the limitations contained in subsections (b) and (c)) the amount of the taxpayer's charitable contributions to institutions of higher education during the taxable year.

"(b) INDIVIDUALS.—In the case of a taxpayer other than a corporation, the maximum amount allowable as a credit under this section for any taxable year shall be—

"(1) in the case of any individual who has elected to take the standard deduction provided by section 141 or to pay the optional tax imposed by section 3, 10 percent of the taxpayer's adjusted gross income, computed without regard to any net operating loss carryback to the taxable year under section 172, or

"(2) in the case of any other such taxpayer, 30 percent of his adjusted gross income, computed without regard to any net operating loss carryback to the taxable year under section 172.

"(c) CORPORATIONS.—

"(1) GENERAL RULE.—In the case of a corporation, the maximum amount allowable as a credit under this section for any taxable year shall be 5 percent of the taxpayer's taxable income, computed without regard to—

"(A) section 170,

"(B) part VIII of subchapter B (except section 248),

"(C) any net operating loss carryback to the taxable year under section 172, and

"(D) section 922 (special deduction for Western Hemisphere trade corporations).

"(2) CORPORATIONS ON ACCRUAL BASIS.—In the case of a corporation reporting its taxable income on the accrual basis, if—

"(A) the board of directors authorizes a charitable contribution to an institution of higher education during any taxable year, and

"(B) payment of such contribution is made after the close of such taxable year and on or before the 15th day of the third month following the close of such taxable year,

then the taxpayer may elect to treat such contribution as paid during such taxable year.

"(3) CARRYOVER OF CORPORATE CONTRIBUTIONS.—Any contribution made by a corporation in the taxable year which, but for the limitation of paragraph (1), would be taken into account in computing the credit under this section, shall (at the election of the taxpayer made for the taxable year) be taken into account in computing the credit under this section in each of the two succeeding taxable years, but only to the extent of the lesser of the two following amounts:

"(A) the excess of the amount of charitable contributions to institutions of higher education which may be taken into account in computing the credit under this section under the limitation in paragraph (1) over the amount of the charitable contributions to institutions of higher education made in such year; and

"(B) in the case of the first succeeding taxable year, the amount of such excess contribution, and in the case of the second succeeding taxable year, the portion of such excess contribution not taken into account in the first succeeding taxable year.

"(d) INSTITUTION OF HIGHER EDUCATION DEFINED.—For purposes of this section, the term 'institution of higher education' has the meaning given to such term by section 103 of the National Defense Education Act of 1958.

"(e) SPECIAL RULES.—

"(1) AMOUNTS TAKEN INTO ACCOUNT.—The determination of whether or not a charitable contribution to an institution of higher education may be taken into account under this section, and the amount thereof, shall be made under section 170; except that in the case of an individual any such determination shall be made without regard to any election to take the standard deduction provided by section 141, or to pay the optional tax provided by section 3.

"(2) CORRELATION WITH SECTION 170.—No amount taken into account under this section shall be allowable as a deduction under section 170. Any amount taken into account under this section shall be taken into account in computing the limitations provided in section 170(b)(1) (but not those provided in section 170(b)(2)). For purposes of provisions of law relating to amounts allowable as a deduction under section 170, any amount taken into account for purposes of this section shall be treated as an amount allowable under section 170; and any reference in any provision of law to a specific provision of section 170 shall, where appropriate, be treated as including a reference to the corresponding provision of section 39. An amount shall be treated as taken into account for purposes of this section only to the extent that, but for such amount, the amount allowable as a credit under this section for any taxable year would be decreased.

"(3) CREDIT NOT TO RESULT IN REFUNDS.—The credit allowed by this section shall not exceed the tax imposed by this chapter, reduced by the sum of the credits allowed by this part (other than this section and section 31).

"(4) ELECTIONS.—Any election provided by this section may be made only at such time, in such manner, and subject to such conditions designed to insure the effective correlation of this section with section 170, as the Secretary or his delegate shall by regulations prescribe."

(b) The table of sections for part IV of subchapter A of chapter 1 of such Code is amended by adding at the end thereof the following new item:

"Sec. 39. Credit for charitable contributions to institutions of higher education."

SEC. 2. (a) The second sentence of section 170(a)(1) of the Internal Revenue Code of 1954 (relating to charitable, etc., contributions and gifts) is amended to read as follows: "A charitable contribution shall be allowable as a deduction (or taken into account in computing the credit under section 39) only if verified under regulations prescribed by the Secretary or his delegate."

(b) Section 170(c) of such Code is amended by striking out "For purposes of this section" and inserting in lieu thereof "For purposes of this section and section 39".

SEC. 3. The amendments made by this Act shall apply only with respect to charitable contributions made (within the meaning of section 170 of the Internal Revenue Code of 1954) during taxable years ending after the date of the enactment of this Act.

YOU CAN'T FLY ON ONE WING

(Address at 43d annual meeting of the American College Public Relations Association, French Lick, Ind., July 13, 1959, by C. C. Furnas, chancellor, University of Buffalo)

It must be admitted that the public has characteristically fallen into the habit of demanding much but paying little. Recently howls of pain have swept over the land as the public has been made aware of the size of the educational bill it is going to have to pay. Outfumbling the other fellow in picking up the check has become a fine art. The overnight experts in all educational matters are coming out of the woodwork and leveling critical blasts at everything in sight. For instance, we are educating too many. We are encouraging mediocrity and suppressing ability. All high school and collegiate curriculums are loaded with snap courses—no substance. We are teaching the kids citizenship when they should be learning algebra and physics. We should revert to the old European system of the grinding and unimaginative disciplines for the few and let those who can't take it fall where they may. If the colleges and universities were operated efficiently, they could do with what they have—they wouldn't need any more money.

If kept in a rational context this basket of criticisms is welcome and can be useful. I feel that our educational system can and must be improved. There is a lot of pap and padding in both secondary and higher education. There is an appalling lack of appropriate motivation for true learning among our young people; though a large part of the blame for that must rest with the parents. Colleges and universities certainly can be operated more efficiently than at present. When all these valid criticisms are met, we are going to have better education but—let's face it—we are not going to have cheaper education.

Not unexpectedly, many individuals and organizations have been making estimates on the size of the bill to be paid to handle the forthcoming 6½ million students. Although various approaches and different sets of assumptions have been used, the estimates all come out with surprising consistency at about $9 billion per year in 1970, as compared to the present $3½ billion per year. This estimate assumes a stable price structure, so if there is inflation, the bill will be even higher than that.

The question immediately comes to mind—why should the cost go up in greater proportion than the number of students? There are three reasons.

First, the salaries of faculty and administrative staff have lagged woefully behind the increases in cost of living and the general level of the economy in the professional fields. Rectification of this situation throughout the country is long overdue and must be remedied with dispatch. It is necessary to do this, not only for humanitarian reasons but also because impending teacher shortages are making this a highly competitive occupation and it will be necessary to raise salary scales substantially to maintain even the bare minimum number of teachers for the future.

The second reason is that there is a considerable reservoir of delayed expenditures for buildings and facilities which is just now catching up with the educational system.

Third, as is the case with everything else in modern life, higher education is becoming inherently more complicated and hence more expensive, particularly in the scientific and allied professions.

From all evidence in hand, it seems that America, if it intends to maintain its position in the world, must realistically face this tremendously large bill and not try to evade or avoid it.

When one considers that at the present time we are spending less than three-fourths of 1 percent of the gross national product on higher education, and that even the $9 billion which will be needed is less than one-fourth of the present annual budget for national defense, it would seem that the public would readily arise to the occasion to meet this critical situation, which is rapidly becoming an emergency. Those of us who are in the middle of the battle feel that this is the decade for decision and we have a real crisis on our hands, but it is difficult so to persuade the public. It is not a crisis which is punctuated with open warfare or daily casualty lists, so the average citizen feels that it may be a delusion and will probably go away. As individuals, all of us can feel very sorry for ourselves because of high taxes and the constant bombardment of appeals for gifts to this and that worthy cause. We are all victims of and at least partial participants in a high level public apathy, and something new must be added if we are going to handle the task.

Some comfort can be gained from the estimates that the gross national product will rise to some $700 billion (at 1959 prices) by the year 1970, as compared to the 1959 figure of somewhat under $500 billion. However, this projected 40 percent rise in available wealth will by no means take care of the projected 260 percent increase for higher educational costs.

The Council for Financial Aid to Education, Inc., in its pamphlet "Where's the

Money Coming From?" views the situation with considerable optimism. It has laid out the 1969–70 sources of income as follows:

	Million
Tuition and fees, 21 percent	$1,890
Support from governments, 50 percent	4,500
Private gifts and grants, 21 percent	1,890
Endowment earnings, 3 percent	270
Other sources, 5 percent	450
Total	9,000

The council contends that raising these amounts from these sources is feasible. There are two points on which I cannot share its optimism. First, the proposed $1,890 million of voluntary support of private gifts and grants should be compared with the corresponding figure for 1957–58, which has been estimated to be $411 million. Hence, the council's figures anticipate a 450-percent increase in the flow from voluntary sources—all within the span of 10 years. Although I am not a cynical individual, I seriously doubt if private purses are going to open up to any such extent as that. My attitude is admittedly tempered by many discouraging recent experiences in attempting and failing to obtain substantial gifts. Under the present tax structure the private-donation lode does not contain as much paydirt as the council visualizes.

The council has estimated an income of $4,500 million from governments, to be compared with $1,750 million from that source for 1957–58. This represents a 257 percent increase from the public purse. In view of the incipient taxpayers' revolt which is making itself evident in all parts of the country, there is considerable doubt as to whether the average citizen will vote for the necessary increases. Though the national tax bill for higher education is only a fraction of the total tax burden, it is highly visible and subject to extreme criticism and delays. It is almost certain, unless something changes radically, that the public as a whole will decide that it would rather retain its new automobiles, superhighways, and extended vacations in distant places than properly to support colleges and universities.

When Americans see a crisis clearly, they nearly always rapidly and adequately rise to the occasion. But this crisis is not sufficiently evident to cause the adrenalin to flow in adequate quantities in the public veins. When the realization does come, it may be too late—tragically so.

What is the solution?

IV. OPENING THE VALVE

Although I recognize it is no panacea, I do have one suggestion to make which I feel should be explored—that is, the opening of the valve to encourage greater voluntary support of higher education. Though it can only serve as an analogy, I would point to the control function of the Federal Reserve Board discount rate. Adjustment of the rate has proved very effective in controlling the flow of credit. Put another way, it can be said that the flow of financial resources in a desired direction is highly sensitive to and can be adjusted by a control at the top. I feel that through certain relaxations of the Federal tax laws an analogous and effective control could be exercised to induce individual citizens and corporations to give substantially increased voluntary support to higher education in a relatively painless fashion. In order to analyze the situation, let us look at the tax record for the latest year for which full complete data are available, 1956.[1]

For the calendar year 1956 adjusted gross income of the individuals who paid Federal income taxes was approximately $124 billion. Although by law these individuals were permitted to deduct 20 percent from their adjusted gross income for contributions for charitable and educational purposes, these contributions amounted to only $4,888 million—less than 4 percent.

You may turn now to the corporate picture for the accounting period July 1956 to June 1957. The taxable income of all corporations reporting was $46,885 million. According to the law, gift deductions for partial tax credit can be made for approximately 5 percent of the taxable income in any 1 year. However, the corporate contributions and gifts were only $417,996,000 or less than 1 percent of the taxable income.

Thus for this period the total contributions and gifts from individuals and corporations was $5,294 million of which only $317 million, or 5.8 percent of the total, went to higher education. The total amount which individuals and corporations could have given to charitable and educational purposes and received partial tax credit was $27,088 million. Hence, the reservoir of voluntary support legally authorized, and presumably intended to be used, was utilized to less than 20 percent of its contents. It is obvious that the valve needs to be opened a bit wider than it is at present. It would appear that this could most readily be done by revision of Federal tax legislation.

Adjustment of the tax legislation to favor higher education is not a new idea. For instance, during the current year Congressman FRANK THOMPSON, of New Jersey, introduced House bill H.R. 2440 to amend the Internal Revenue Code of 1954 to provide funds for educational purposes by providing increased incentives for private giving through the allowance of tax credit for charitable contributions to institutions of higher education. Though this bill has never gotten out of committee, its content does indicate that some legislators are becoming interested in this approach.

When relieved of its legal verbiage, this bill essentially proposes that all contributors to recognized institutions of higher education be given the same deduction advantages as the highest income group. Under the present tax schedule this means that each dollar contributed to higher education by any individual would cost the donor only 9 cents. Each dollar any corporation contributed would cost the stockholders 48 cents.

Although this is a step in the right direction I contend, human nature being what it is, that it does not open the valve wide enough.

To solve the problem, I suggest that Federal legislation be enacted which will give tax credit to both individuals and corporations up to 5 percent of their total tax bill for contributions to the institutions of higher education which are on the list approved by the U.S. Office of Education. Individual and corporation Federal taxes in the year 1958 were approximately $60 billion. If there were the legislation that I suggest, it would mean that approximately $3 billion of annual voluntary support could be given by individuals and corporations and it would hardly cost them a cent.

We must not fall into the trap of assuming that you can get something for nothing, but it must be admitted that that would be a powerful psychological tool that would be very helpful in diverting a small portion of the national wealth into the channel where it is desperately needed—higher education.

If such legislation were enacted, it is almost certain that individual States would also revise their own tax structure in a similar fashion within a short time.

If colleges and universities worked very hard in convincing possible donors of their opportunities and obligations, they could probably realize $2 billion per year of the $3 billion potential. This would make a tremendous difference in the ready flow of money through the voluntary route. It would make it possible not only to meet but greatly to exceed $1,890 million of annual contributions in the CFFAE schedule. It would thus be possible to relieve the tax burden appreciably.

Although private institutions might well be the principal beneficiaries of such legislation, tax-supported institutions would also benefit substantially. The public institutions are finding it increasingly necessary to obtain large sums of private money, not only for current expenses but also for endowment. For example, available information (admittedly not up to date) on endowments of certain State universities show the following: University of Michigan, $25 million; University of Minnesota, $59 million; University of California, $86 million; University of Texas system, $287 million. State universities are naturally continually seeking more private funds. Both public and private institutions are essentially in the same pool of water. One type is just immersed somewhat more than the other.

It is easy to recognize and name the objections that would be raised to the legislation I propose.

First, it goes against the grain of legislators to release funds and maintain no control. In response to this, I would like to point out the following. There would be the basic control in that the money would be going only to colleges and universities. The choice of the particular institution to be favored would be left up to the donor. In America, presumably we believe in free enterprise, which implies that within substantial limits we believe in allowing individuals to use their income as they see fit. If legislators really believe in free enterprise, I think they should be consistent and rely on the judgment of individuals to choose reasonably wisely in distributing their largesse among an approved list of institutions. This represents free enterprise of free individuals.

Second, if such special treatment is given to educational institutions, there will be great political pressure to have it made available for various charities: Churches, welfare agencies, and others. It is high time that education be recognized for what it is—a highly necessary investment in the future. It is not a charity and should not be perpetually lumped in with charitable enterprises. The special treatment is highly deserved and can be well justified.

Third, it will be contended that such legislation would mean that an equal amount in additional taxes would have to be raised from other sources. This would be only partially true. The flow of money through the voluntary route would relieve the necessity of taxation to a substantial degree. Hence, though some additional tax money would have to be found from other sources, it would by no means have to be a 100-percent recovery.

In general, if we Americans, as citizens and legislators, really believe what we say—that higher education is necessary, that our institutions are in a crisis situation, that free enterprise has great virtue—then we will concede that special and favoring legislation for colleges and universities is not only possible, it is necessary. I suggest that ACPRA, through its numerous and effective channels, begin campaigning on a national scale for the type of tax legislation which will meet the situation.

Perhaps you as a group may have a better idea than the one I have propounded. There are several of us here who are of sufficient age to have vivid memories of World War I. You will remember the British cartoonist, Bruce Bairnsfather, and his famous char-

[1] Internal Revenue Service Publication No. 79 (11–58), Nov. 14, 1958, p. 35.

acter, Old Bill. You will recall the classic cartoon in which Old Bill and a very frightened rookie were sheltering themselves against a heavy bombardment, as best they could, in a too-shallow shellhole. In response to the young fellow's protestations, Old Bill said, "If you know a better 'ole, go to it."

Debt Management

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. CURTIS of Missouri. Mr. Speaker, because of the importance of debt management, I bring to the attention of my colleagues another editorial from the Washington Post and Times-Herald, July 20, 1959, as follows:

EFFECTS OF U.S. BORROWING ON LITTLE BUSINESS

(By Harold B. Dorsey)

Since business and financial planning must be completely realistic, it is beginning to take into consideration the practical effects of the prospect that Congress will not pass the legislation necessary to permit the Treasury Department to sell Government bonds at an interest rate in excess of 4¼ percent.

That thinking is already demonstrated by the fact that in its current refinancing of about $14 billion of maturing debt the Treasury Department has to offer an interest rate of 4¼ percent to borrow money for 12½ months, and the same rate to borrow money for 4¾ years. These interest rates are in sharp, and unusual, contrast with the fact that Government bonds now outstanding with maturities beyond 1966 afford a yield ranging 3.77 percent and 4.17 percent.

One practical effect, then, of the Treasury Department's enforced inflexibility is this evidence that the Government's expenditures for interest charges on this single piece of refinancing alone are probably going to be something like $70 million a year more than they would have been if the Treasury Department were free to tap the most advantageous credit markets. This increased expenditure for interest charges is the result of only this one piece of current Government refinancing. The interest charges on financing of the past few months probably have been unnecessarily higher and the same promises to be true of future financing.

Thus the taxpayers are being forced to pay a few hundred million dollars of unnecessary expense for interest charges because of a misunderstanding of the problem in Congress. Just why that misunderstanding should prevail is a little difficult to see. The situation is really comparatively simple. Because the interest ceiling bars the Government from the long-term credit market, it is being forced to borrow in the short-term credit market, where it is competing with the credit needs of business and individuals for the limited supply. As a understandable result, the interest rates are forced higher. Everybody would be better off—except the lenders—if some of these funds were obtained in the long-term credit markets where the interest rates are currently lower.

The business analyst must be strictly objective in his interpretation of the facts. There is little room in such interpretations for questions why Congress may be making decisions that seem to be illogical from every practical point of view. The latest indications are that Congress is not going to lift the ceiling on the interest rate of government bonds, and if those indications are to become the actuality, then the interpretation and the business planning has to be adjusted accordingly.

The small businessman in particular should start adjusting his affairs immediately. The lack of congressional action on this particular matter is threatening him with an exceedingly difficult problem in obtaining the necessary credit to carry his seasonally higher inventories next fall and winter. As the current situation shapes up, he is probably going to find bank after bank loaned up and, therefore, unable to supply his credit needs.

The small businessman may not be able to carry as large an inventory as he would like, to take care of the seasonal increase in his sales. If he, therefore, has to anticipate lower sales as earnings, his capacity to provide jobs will be reduced. If he has debt maturing between now and the end of the year that under normal circumstances would be refinanced, he may be squeezed to an embarrassing extent. He will then come face to face with the fact that Congress is unnecessarily forcing the Government to compete with him in his natural credit market. It will be a brutal fact the Government's credit needs will be given preference over his own.

It must be remembered that we are entering the season of rising business needs for credit, with the commercial banks' ratio of loans to deposits already at a very high level. On top of that condition we now have to envisage a continued heavy demand in that same short-term credit market by the Government. The combination threatens a credit stringency of serious proportions. As usual, small business will be hurt worse than big business, but this time it should be clear that the fault is centered in the failure of Congress to understand the foregoing situation.

Some Congressmen evidently disapprove of Treasury Department and/or Federal Reserve policies. It scarcely seems fair to let that feeling create a condition which can severely hurt the affairs of many thousands of little business people. After all, neither the Federal Reserve officials nor the U.S. Government can force lenders to invest their money in long-term bonds at 4½ percent or less if they don't want to. The lack of congressional action on this interest rate ceiling continues to force the Government to absorb short-term credit that should be left available to the little businessman. He is already paying a high interest rate, but as matters stand at the moment, he is going to be lucky if he can obtain his fall and early winter credit even at a higher rate.

Up to this point, it has been my opinion that the fairly tight credit situation would not stop sound business expansion, but would only tend to curb the excessive use of credit. That opinion had been based on the presumption that Congress would enable the Government to withdraw somewhat from the short-term credit market and tap the long-term market. If that presumption is going to turn out to be erroneous, the business analyst is going to have to start worrying about the effect on the economy of the threatened financial squeeze that seems likely to be imposed on small businesses—businesses that are small individually, but collectively are an important portion of the economy.

Roy Bedicheck—A Tribute to the Philosopher-Naturalist of the Southwest

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Tuesday, July 28, 1959

Mr. YARBOROUGH. Mr. President, on May 21, 1959 Mr. Roy Bedichek—one of Texas' greatest men of letters—died at the age of 80 years. Few men have made so great a contribution to our people in Texas as he did; few men's presence has been so sorely missed as his.

His death touched me personally very deeply, as it hit many of our mutual friends. I have read his "Adventures With a Texas Naturalist" and "Karankaway County." I sat at a table with him for many nights in Town and Gown. He was a naturalist-philosopher reminiscent of Thoreau, W. H. Hudson, Burroughs, Muir, and other lovers of woods and wildlife and keen observers and teachers of their fellow men. It was my very great honor and privilege to have had his friendship and counsel and support in my political campaigns. One of my real regrets is that the last time he came by my campaign headquarters in Austin last summer to offer the benefit of his advice, I was out campaigning the State. He conferred, instead, with my staff, but I am still sorry that we did not get to talk personally. But the staff was lifted up and inspired by his visit, and still talk about it.

Thousands of words have been written and spoken about "Mr. Bedi," as he was affectionately known to close friends. But by far the greatest recognition given him in print was published by the Texas Observer, an independent-liberal weekly newspaper. Ronnie Dugger, the brilliant young editor of the Observer, issued a special edition concerning "Mr. Bedi's" life. It is an outstanding work, containing articles from several of Texas' finest writers, among them J. Frank Dobie, Walter Prescott Webb, Hubert Newhinney, and Mr. Dugger. I regret that space limitations will not permit me to reprint every word of this finest edition of one of the most fearless and influential weekly papers in America.

Mr. President, I ask unanimous consent of the Senate to have printed in the Appendix several articles or portions of articles from the Texas Observer of June 27, 1959, notwithstanding that it is estimated by the Public Printer to make 4¼ pages of the RECORD at a cost of $344.25.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

THE RESPECT OF INTELLIGENT MEN

This is a special issue on Roy Bedichek, who died May 21 at the age of 80.

He was born in Illinois in 1878 and brought to Texas at 5 by his teacher-parents, who tutored him until he entered the University of Texas.

For 15 years after college he bummed around the country and the world. He picked cotton in the South, peeled potatoes on a riverboat, picked berries in New Jersey, washed dishes in a Chinese cafe in New York City, tramped over the English, French, and German countrysides, assisted a fake divine in Boston, dug coal and scouted rivers in West Virginia, cut off hogs' heads in a Chicago slaughterhouse, and homesteaded a dugout in Oklahoma.

Mrs. Bedichek says he had "lots of yella' hair, and green eyes with lots of spots in them." With a wife and children, he worked as editor of a newspaper in Deming, N. Mex., secretary of the Deming Chamber of Commerce, and city editor of the San Antonio Express.

Then as the director of the University Interscholastic League of Texas, he began to affect the lives of millions of Texas children. "Hold before the young," he said, "the same great theme of superior performance and the vision of greatness it inspires." To the league's competitions in sports, speech, music, and writing he gave most of his life.

Along the way he became a naturalist, a camper, a gardener, and an intellectual steeped in the classics. With $5,000 from the Texas Historical Society and sanctuary at Walter Webb's Friday Mountain camp in his late sixties he began to write his books. In the last dozen years of his life he completed four of them: "Adventures With a Texas Naturalist" (Doubleday, 1947), "Karankaway Country" (Doubleday, 1950), "Educational Competition" (University of Texas, 1956), and a book on smells, publication pending.

About 11:30 on the Thursday morning of May 21 he asked Mrs. Bedichek for his lunch a little early as he was excursioning into the country. "I've got some cornbread almost done, you want to wait?" she asked. "Oh, I'll wait," he said, sitting on a stool. "I need southern cornbread."

"Six breaths it was over," Mrs. Bedichek says. "How could he die in seconds when he had been so strong?"

The Texas Senate resolved that he was known and loved by thousands of Texas children and had the respect of intelligent men.

ROY BEDICHEK

(By J. Frank Dobie)

I. THE NATURAL MAN

Nature is the complex of all complexities. One part of a man may be as simple and serene as the cow chewing her cud in the noonday shade of a tree a thousand miles and a hundred years away from any milking machine; and yet the whole of this same man may be as complex as the genius of Shakespeare—that is to say, the greatest genius in the world—ever penetrated. It will be a great deal easier to show Roy Bedichek in the simplicities of naturalness than to express him in the naturalness of the highest intellectual and emotional complexities.

His going to bed with the chickens in summertime and not too much later in the wintertime and getting up with the morning star at all times made his friends smile. He favored several kinds of independence common to the country. * * * He liked to cook outdoors, eat outdoors, sleep outdoors, look and listen outdoors, be at one with the unexplaining wind from the South, with the swing of the Great Dipper around the North Star, and with the first bob-whiteing at dawn. He preferred camping on a hill so that he could watch the firmament, rather than down in a shady valley by water.

The last car he bought, in 1951, was a Dodge pickup truck in which he could carry enough water to make his camp on a hill comfortable for a day or two. This pickup was for camp purposes, but he used it to run about in also, his wife owning a sedan. He got an immense satisfaction out of trucking in cow manure, also occasionally chicken manure, for his compost pile, with which he annually fertilized his garden. He got a satisfaction out of hauling his own wood in from the country; he liked especially cedar stamps that he wouldn't have to cut for the fireplace. He had complete camp equipment, including a tent-fly to go with the truck. Part of the equipment was a field guide to the flora of the country and a field guide to the birds. He always took along something to read as well as to consult; above all, he took along the most richly and variously stored mind I have known. Not for him the dream of retiring to some primitive land and mating with some savage woman to rear his dusky race. For him back to nature was not back to the primitive, there to be saved from poring over miserable books.

His father, James Madison Bedichek, an ex-Confederate soldier, quoted philosophers and talked philosophy at the family dining table. He proved up on a quarter-section of land near the village of Eddy, not far from Waco in central Texas. Here he and his wife ran what they called the Eddy Scientific and Literary Institute, dubbed the Bedichek School by the public. Mrs. Bedichek boarded and roomed some of the pupils. Roy's aptitude for books was as congenital as that for milk. The atmosphere of literature and of thought was as natural to him as the atmosphere in which a lone buzzard soars over a cedar-covered hill or in which a coyote trots through the mesquite, sniffing for a woodrat's trail. I would not call his taste exactly austere. He took pleasure in witty limericks, even though bawdy; he could talk for hours with some cedar-chopper whose literary vocabulary was limited to the printing on a bottle of Levi Garrett's snuff. I've heard him say a dozen times that he could no longer read American fiction because it is so pallid and insipid compared to the great Russian fiction rammed to the breech with vitality: Turgenev, Dostoevsky, Tolstoy. He admitted Balzac into their company. During a long span of his life he read the greater part of Shakespeare about once every 2 years.

The Walt Whitman that he knew by heart and had absorbed into his very marrow was not the sentimentalized "good gray poet," but the tough poet of democracy. "He is our greatest exponent of democracy among the poets," Bedi wrote me in a letter. "The reaching hand, bringing up the laggards—could there be a more expressive phrase of the true inwardness of democracy than that?" Along with Whitman, his favorite American writer was Thoreau, acid, with the wild taste, a rebel. Bedichek gloried in the influence that Thoreau's "Civil Disobedience" had on Gandhi and India and is still having over the world.

While he was writing "Adventures With A Texas Naturalist," or maybe it was "Karankaway Country," he made a habit of reading pages of Plato with his predawn coffee. Plato helped start the day for him on a noble plane and put him into a creative mood. At this time he would not will the freshest part of the day with the littlenesses and banalities of a morning newspaper. For no man writing a book has morning ever been, to quote a 1945 note from Bedichek, a time to "stroke the furnace of indignation against numerous manifestations of fascism in this country." He never learned the Greek language, but his ideal of a balanced life, of a just proportion of the elements that make up a human being, was essentially Greek. In reading Homer, he compared several translations. As hundreds of quotations and allusions in his books and letters would show, the immortal essence of the Greeks was in his veins.

It seemed to me that the philosophy of Henry George had a more determining effect upon his economic views than any other writing. Henry George advocated a single tax and did not consider it just that an individual owner of real estate should collect the unearned increment given to it by population and labor. Bedichek believed in the single tax but would justify buying a piece of land by saying, "It's better to run with the hounds for your dinner than with the hare for your life."

Immanuel Kant's categorical imperative was his golden rule: Do only as you would have others do; or, act only as if you would have the act become universal law. The categorical imperative is contrary to the ways of greed and lust; so was Bedichek. He was as unenvying and as free from greed and jealousy as any man could be.

In the early 1920's he suffered from a rash caused, he was told, from eating too much of high proteins, especially eggs. He became for the rest of his life what Sam Houston called "a damned vegetarian." He was not too rigid, however, to enjoy latitude upon occasion. As a guest he ate of the meat set before him. He took the lead many a time in getting a few men friends to go out in the country for a meal and talk. There was always a steak, and Bedi always insisted on cooking the steak over coals. Nobody could cook it better, and he was no slacker in eating his part of it. Cooking meat over an open fire mitigated in his mind any protein poison it might have; at a hotel table I've seen him dispose of an untouched steak to somebody else who could eat a double one. He had a theory that the deeper down into the earth a plant puts its roots, the richer its fruit is. He positively gloated in dilating on the mineral and other virtues of pecans. He loved to mix a green or a fruit salad and would linger long and lovingly in detailing his recipe for such.

In theory he was against doctors; I think he wrote considerably on a book intended to expose at least several sides of the medical profession—though he believed very much in his doctor daughter, Mary Virginia Carroll. He would quote an old proverb: "A man's either a fool or his own physician after 40." He said that a sick man should have as much sense as a sick cow: She quits eating and goes off and lies down.

Sometimes it didn't seem at all natural to me that Bedi should be practical. He was a productive gardener, as his table, his deep freeze, and many a mess of vegetables he gave to friends showed. Yet he put a kind of ritualism into gardening that farmer folks wouldn't and couldn't bother with. When I drove with him in his pickup I constantly wondered how he made it through the streets—but he always made it.

He liked raw milk, believed in its virtues for himself and his family. He had a contempt for boiled and chemically treated milk, something taken out, and something else put in. For years he milked his own cow. There were vacant lots not far distant from the Bedichek home on East 23d Street in Austin, where a cow could graze. The last cow he had, about 1932 or 1933, was a 4-gallon milker. She was very gentle and very much devoted to the Bedicheks, but keeping a cow and milking her became too much of a burden, and Bedi sold her to a man out near Deep Eddy on West Sixth Street. This man saw the cow being milked. Bedi told him that she wouldn't give milk unless she were treated gently and fed well. He got up at 2 o'clock in the morning to lead her to the purchaser, thus avoiding the traffic. The purchaser hadn't had her more than two or three days before he complained that the cow wasn't giving the milk claimed for her. He wanted his money back. Bedi went out there. The cow was shrunken and showed abuse. While the man was away for a minute, his wife told Bedi that

her husband had beaten the cow. Bedi felt like beating the man but he left. He didn't give him his money back either. Anybody who knew him would as soon expect apples to fall up instead of down as for him to misrepresent a fact.

In the vigor of early manhood Bedi drank some whiskey—maybe not too much—although after he married any drinking was bad economically. I don't think he ever loved any man quite so much as he loved his college friend Harry Steger, with whom he went to Europe and who died young. He cried all day long, so Mrs. Bedichek has told me, after receiving word of Steger's death. One of his favorite anecdotes was of meeting Steger on Congress Avenue in Austin one day. They both wanted a drink but before entering a saloon swore to each other that they would take only one and then get out. They took the drink, and it was good. "Well, let's go," said Bedi. "That drink makes me feel like a new man," Steger said, and "now the new man has to have a drink." I never did ask Bedi if he joined the new man.

By the time I got to know him, he wasn't smoking the pipe or cigar he had once smoked. He took real solace in a bottle of beer along in the evening or with a Mexican meal—but virtually never more than one. Along about 1954 or 1955 in the middle of a terrible drought devastating much of Texas, I brought back about a dozen cases of Carta Blanca beer from Monterrey, Mexico. I had a devil of a time getting them past the customs ignoramuses at Laredo. I had to prove my right to pay duty on beer just as beer dealers pay it. I hadn't more than got to Austin and got a few bottles cooled than I called up Bedi. For awhile I shared that Carta Blanca beer with other people, especially when Bedi was around. When only two cases were left, I cut off everybody, including myself, and saved it especially for Bedichek. Occasionally there might be two or three or half a dozen other men; I'd offer them what they wanted to drink, and if they wanted beer they had to take Schlitz (Bedi's second choice) or something else. Then I'd bring out Bedi's bottle of Carta Blanca. He enjoyed that sort of petting.

II. TALKER AND STORYTELLER

As newspaperman, chamber of commerce exponent, and director of the Interscholastic League of Texas, Bedichek had done a vast amount of hackwork. Anybody who works for a living spends the majority of his energies in hackwork. But though he was a university man, specializing in the humanities, he had never been deflected by the Ph. D. system into the inferiorities of literature. He had spent a lifetime reading the best before he turned author with 70 just over the hill for him. While H. Y. Benedict was president of the University of Texas, I heard him say that Bedichek should be teaching literature. "Why not put him to teaching it?" I asked. "Because every Ph. D. professor of English would have a colt if I did," he replied. That was the truth. Sawdust never yearns toward vitality.

We all learn with wonder of the feats in memory performed by the Macaulays of history, but I've never known anyone else in the flesh who held in memory so precisely so much of what he had read as Roy Bedichek. He could have produced a magnificent anthology of English poetry solely out of his memory—as rich as Lord Wavell drew from his memory in "Other Men's Flowers." He had the added faculty, perhaps of a higher order, of always being able to draw from memory anything related to a subject brought up by conversation or in his own flow of thought. Sometimes he had to restrain himself from clogging his writing with allusions and "decisions that had from the time of King William come down."

Early in the summer of 1953 Jess Akin of Austin decided to paint the portraits of Bedichek, Walter Webb, and myself. He had painted mine unsatisfactorily and wanted to make another attempt. If a person is being portrayed for his significance, every effort should be made to make that significance appear on his countenance while he is sitting for the painter. I volunteered to do my best to keep Bedi's features illuminated while he was being painted. I knew that he would do more talking than I, for he was just naturally a better talker. I illuminated him for 4 half days. After Aikin was through with Bedi, he took me on, and Bedi came to brighten me. We had eight conversations amounting to perhaps 30 hours in less than 2 weeks. I can say of Bedichek as Johnson said of Burke: "That man draws out all my powers." Neither he nor I was empty or exhausted when the sittings came to an end. Sitting and talking had become a kind of occupation with us. Several times I thought I would make notes on the subjects of our talk. I did not. Naturally, we recurred occasionally to the same themes—but without repeating. Now I cannot recall a hundredth part of what either said; if I could recall all, a book would be required to hold it. Little of it was trivial. It interested us, and that was sufficient.

Will Burges, lawyer of El Paso, John Lomax, of cowboy song fame, and Roy Bedichek were the pithiest and vividest relators of anecdoes about human beings they had encountered that I have known. Despite his rich stores out of books, Bedichek in the course of conversations with his peers drew more often from actual experience. He could make any character that interested him fascinating.

He told few stories except to reveal character, to bring out some point, or to complement something else. Lots of times one merry tale would call up another.

Boswell's life of Johnson is the greatest biography in the world because it records the best talk that has ever been recorded. Bedichek often talked as well as Johnson talked—but he had no Boswell to record more than a few snatches of his talk.

As president of the Texas Institute of Letters, I had notice from judges of books published during the year 1956 that Bedichek had won the Carr P. Collins $1,000 award, to be presented at the institute's annual dinner in Dallas February 1, 1957. On the evening of January 20, I went to his home, finding him alone. I had telephoned him that I had a letter to confront him with. He was eating a salad of tomatoes, lettuce, cheese, and a little mayonnaise, moistening it down with a glass of buttermilk. He thought I should take a little something and spooned out yogurt into a bowl and put honey on it. We were both honey hounds, honey being the highest form of sweetness—natural. I could not remember having tasted yogurt before. He told me how monks in a Hungarian monastery had cultivated the yogurt germ hundreds of years ago, keeping it secret; how one escaped with the process to Canada, whence it came to California, where yogurt is now made and sold. "I get the yeast in a container every 3 weeks by airmail," Bedi said, "and make 6 quarts." He described in detail the sanitary processes for making yogurt and its bodily virtues. "Not the same thing at all," he said, "that you buy in grocery stores." I found it delicious.

After the yogurt, I confronted him with the letter. He read it aloud slowly. When he came to the point—the $1,000 award to Roy Bedichek for his book "Educational Competition," he stopped, joy on his face. We talked a little and then he said, "Dobie, you'll go away and I'll think that I dreamed you were here with this announcement.

"About 3,000 years ago a disciple of one of the Chinese philosophers came to him one morning and said, 'Master, I dreamed last night that I was a butterfly.' The philosopher looked at him hard and said, 'Sir, are you sure now that you are not a butterfly dreaming that you are a man?' "

"That word 'confront' you used over the telephone had me puzzled," Bedi continued. "You are somewhat of a precisionist, and confront bears the connotation of something unpleasant. I was wondering what sort of blackguard had been denouncing me and what you could have against me."

Thousands of words had special connotations for him. About the time I carried the good news of the $1,000 prize, the secretary of the Town and Gown Club, to which we both belonged, sent out an announcement of a paper to be read by Bedichek at the fortnightly dinner. His subject was "Water and Soil Conservation in Texas." I noticed the use of that word "confront" in a quotation from Bedi on what he was going to say:

"That which I shall write will be down—I fear far down—on the lay level. The authorities bristle with statistics which I only vaguely understand and speak in a jargon that I don't savvy except in spots. Hence my modesty may be compared to that of the Negro in the folk rime who was confronted with a medical emergency:

" 'Ah ain't no doctor nor no doctor's son
But Ah kin hol' de patient till de doctor come.' "

One time at Conversation Rock, Fred Thompson was with us when I set out anathematizing the pasteurized, homogenized, vitaminized, and otherwise bowdlerized milk now sold in pasteboard cartons, this stuff having driven natural (raw) milk out of the market. I knew Bedi would respond.

When his children were young, he said, and Austin was still just a town, he kept two cows, staking them out on vacant lots and milking them in a pen on his own premises. He "wanted the children to have clean, wholesome, natural milk." * * *

Bedichek never was the kind of person to think all virtue resides in the past and that the world is going to hell. However, the loss of natural things was a frequent theme with him.

* * * * *

I shall die regretting that I did not set down on paper a thousand passages of Bedichek talk before they faded from my mind. Here is a brief note I typed on the night of September 6, 1957. It illustrates the mobility, and homeliness too, characteristic of Bedichek's mind.

"Bill Owens, writer and teacher in Columbia College, New York, and Bedicheck's friend, came to town and this evening after a swim we sat down under the big elm in our backyard to drink beer and talk. When I brought out three cans in two hands, Bedi told this story, which, he said, came to him from an income-tax man.

"In Minnesota, it seems, there is some kind of income-tax law whereby a higher percentage is charged on income made by a joint furnishing entertainment with beer than from one that does not. Anyhow, a Swedish woman opened up a beer tavern in Minnesota and it was soon notorious for the patronage it drew. A tax man went to inspect it.

"He saw the place crowded with men. There were other beer places not far away with only small crowds. All sold the same beer. What was the attraction here? The inspector could see no dance girls, no entertainer of any kind, not even a television set. Then he saw the proprietoress emerging from behind the counter carrying four bottles of beer. She had one in each hand and one sitting on each breast, where they stood steady while she moved with energy and did not touch them. Was this entertainment?"

I keep referring to talk at Barton Springs. One day while we were sunning after a dip in

the cold water, Bedi remarked that a "farm-type of woman" he had encountered that morning reminded him of a wise old mare.

"After an old mare has had 8 to 10 colts," he said, "she gets a look of wisdom hardly seen in the eyes of the wisest philosopher."

On August 7, 1957, after a cold, cold swim in Barton Springs, we sat down about dusk to double hotness in a Mexican restaurant. This is one of the few uses of the word "Mexican" remaining active. Mexican restaurants in Texas are no longer run by Mexicans but by Latin Americans. With Bedichek and me was our younger friend Wilson Hudson.

After much good talk, Bedichek told this story:

"One time out in Amarillo they were having a prohibition election. The pros imported a highpowered speaker to convert the heathen and packed the biggest gathering place in town with an audience. This speaker quoted poetry and displayed all sorts of diagrams showing the effects of alcohol on the human organs. Then he unrolled a long linen chart and hung it up on the wall to demonstrate the waste of money on alcohol. The figgers and letters on this chart were boxcar size so that they could be read half a block away.

"But the speaker was adding emphasis by reading them out in a loud voice. Up at the top were so many millions and billions spent each year in America for food, so much for clothes, so many on churches, so many on education, and on through the catalogue. The figures were soaring the speaker's voice soared to a climax as he read out the billions and millions spent on whisky.

"'And, by God, it's worth it,' a mighty voice rang out. It was the voice of Buttermilk Jones. The announcement of his sense of values came in a way that absolutely killed the speaker's facts and figures."

"Why," Wilson Hudson now asked, "did they call him Buttermilk Jones?"

"Because he never drank buttermilk, I guess," Bedi answered.

"This putting a high value on whisky makes me think of an incident during prohibition days," I said. "Not long after the end of World War I, an Englishman and a Texan were partners trading in oil leases and royalties out in the Burkburnett field. Some bootleggers were making more than owners of oil wells. One day a big well came in on land controlled by the partners; within 15 minutes they cleared a $100,000 by selling just a fraction of what they owned, and they decided right there to celebrate the occasion.

"The Englishman rustled around and found a fifth of Canadian Club whisky for sale at $50. He bought it and took it to their room. He opened it and poured the contents over ice. Raising his glass, he said, 'Here's to whisky—the only time in my life I ever paid what it's worth.'"

Two evenings after this—and a lot of other—talk, we three met again, this time on a shady lawn. I read aloud what I had written, received a few corrections, and saw about three dozen words, sentence structures, and idea combinations to work on. Two evenings later we met again, in a darkening, air-conditioned room, fresh again from Barton Springs with fresh thirst. As we were raising our beer cans, Bedi quoted:

"A chiel's amang ye takin' notes,
And, faith, he'll prent it."

I despair at getting into print the felicity and fitness with which Bedichek was forever drawing out of his storehouse. Many writers, perhaps most, read in order to suck in something that they can feed out. During most of his life Bedi read to delight and enlarge his own mind. Now how in the devil had he come to remember those lines from Burns's "On Captain Grose's Peregrinations Through Scotland"? (He had to tell me the source.) And how in the devil could they lie down there in the cellar of his memory for a generation or two and then, just as occasion arose for their application, jump to the surface like an empty corked bottle released at the bottom of a pool?

III. MY FRIEND

On February 24, 1957, I paid Bedi a visit in his shack, taking with me for him a paperbound copy of A. E. Taylor's "Socrates, the Man and His Thought." On the flyleaf I had written:

"DEAR BEDI: I give you this book because I would be as bereft if you went away as Crito and the others were when Socrates went. As one of them said of him, I can say of you, my friend, 'the wisest and justest and best man that I have ever known.'—Dobie, February 24, 1957."

Two days later I received this letter.

FEBRUARY 25, 1957.

DEAR, DEAR DOBIE: After I had been about an hour at work this morning, I glanced up and saw the volume "Socrates" you gave me yesterday. I remembered that I had seen some writing on the flyleaf which I didn't take time to read while you were here. I had dismissed it momentarily as a "good wishes" inscription and so had let it escape my attention.

I reached up and got the volume in my hand just to see. I was affected to tears, and I don't mean metaphorical tears but a real secretion from the lachrymose glands. One got loose from the inner corner of my left eye and it felt wet and warm, so I know they were real.

The old Greeks (bless them) were not ashamed of tears. That shame was a part of the sentimentalism and masculine assumption of superiority of that romanticism which assigned tears to women. I am profoundly affected (stirred emotionally in that nervous plexus situated in the abdomen) by your placing me in a unique position in your affections. Truly. I have felt toward you a friendship I never felt for anyone else except for Harry Steger, who died 44 years ago.

Bless you for recording this where I can turn to it when sometimes: "the world is dark and I a wanderer who has lost his way."

Yours,

BEDI.

Two or three years before this, standing in a group of friends, I said to Bedi, "You are as good as grass."

"Don Quixote," he said, "once told Sancho Panza, 'You are as good as bread. Nothing but the sexton and his spade will ever part us.'"

Now the sexton and his spade have come. Something has been sheared off of me.

THERE IS AT LEAST ONE FULL MAN

(By Hubert Mewhinney)

Two things are inextricably mixed: Bedichek himself and Bedichek as a symbol.

Some of us who never spent much time with him still more or less realized ourselves in him. He was what we tried to be: Artist, scholar, and primitive all in one. He must have been well aware of this. There is a letter on the table from my old-time roommate and blood brother Ted Thompson—

"Tam lo'ed him like a vera brither;
They had been fou for weeks thegither."

telling of a debate that he and Mr. Bedi were having on a familiar theme. Ted was contending that although there was a real Socrates—a stonecutter who went barefoot in the streets of Athens and disputed philosophy with all comers and perhaps even drank all the others under the table at Agathon's banquet—the Socrates of the Dialogues is Plato's idealized image of man as the lover of wisdom.

But it does not really matter. Maybe Plato overidealized Socrates and maybe we have overidealized Mr. Bedi. Even so, we shall do better for loving the myth we ourselves have helped to make no less than the man himself.

I knew Mr. Bedi for years but because of time and chance I knew him better through Ted than by being with him myself. Only once did I spend a full day with him. That happened when I went to Austin to write a rather trivial newspaper story about Frank Dobie.

The three of us went out to a little ranch that Mr. Frank had in Burnet County. He had offered to bet that one of the wild cherry trees growing along the creek was at least a foot in diameter. For Dobie, the claim was astonishingly modest. The three of us measured his tree and found it was more than two feet in diameter. We hunted for flint chips on the creek flat—one bunch of Indians or another left flakes on nearly every creek flat in the whole Edwards Plateau country—but we found only two chips of flint and one spent .30-30 bullet.

We watched two birds having a fight. Mr. Frank and I knew that one of them was a scissor-tailed flycatcher but Mr. Bedi had to explain that the other one was a cowbird and she was trying to lay an egg in the flycatcher's nest. And I blew a dog-calling horn that was hanging on the back porch of the house, just to see if it would really blow. It would.

But the thing I remembered best is watching Mr. Bedi wash the dishes after we ate dinner and took a nap. This is a simple act. Millions of people, mostly women, wash the dishes every day. But it is not often that you see an artist, a scholar, a naturalist, and a teacher of young men wash the dishes.

Knowing how to do the simple things has got to be a sort of desperate, lost-soul cult with me in the past few years: How to use an axe, a shovel, and a hoe; how to call the dogs with blowing horn; how to climb the tree and kick the coon out; how to build a fire with one match in the middle of a thunderstorm.

So I watched Mr. Bedi wash the dishes and I thought, without ever saying so: There is at least one full man left in the world. He writes books, he reads Plato, he can name all the birds without a gun, he loves poetry, and he loves the woods, the prairies, the seashore; the hawk in the wind; the blue, blue gentians blooming at the foot of the slope; the Pointers and the Pole Star and Orion, that have shown the way at night for so many thousands of hunters and seafarers; the campfire, with its light flickering on the leaves of the trees.

"For we are lovers of the beautiful," Pericles said in the most famous of funeral speeches, "and yet with no loss of manliness."

AUTHENTIC TIDINGS OF INVISIBLE THINGS

(By Ronnie Dugger)

I

Those who have much to remember about Roy Bedichek are more fortunate than I, who am like a fool youth who might have feasted his mind on the talk of Socrates but spent his time instead in zealous plotting for a better Athens. Still, intermittently the last 4 years of his life I was one of the younger men whose intrusions Bedichek humored. He took pleasure in youth, perhaps because we illuminated his memories, and meant to him life that would go on after him, shaped by his ways; for he was an emulable man.

I have tried to emulate the way he timed his work and rest to "the rhythm of the natural day." Rising at 3 or 4, he began with an hour or two of reading "while slowly sipping a cup of weak coffee." Then he stepped out of his house and trundling down the alley to his private place took counsel with the stars.

"My hideout," his workshed, was a room and garage half a block down the alley from the house. At once on cold mornings he started his wood fire in the pot-bellied iron stove in the center of the room. He sat in a hard-back wood chair at his table; his guest took the rocker beside the stove. On his aged typewriter the keys looped up and landed on the cylinder like overhand haymakers. The walls were books, from the floor to the ceiling. I did not keep notes on the gifts he gave me there those few mornings—recitations of verse, ideas from the past, his ideas, his enrichment of my ideas—but had there been nothing but his telling me, "The most important thing a young man who needs solitude must do is get a place physically apart from his family, a place altogether his own. If only I had realized that sooner!", still he would have strengthened my life.

One morning we greeted on the southwest corner of the University of Texas campus. The grass in the sun was bright green; we sat beneath a venerable oak, on a cement bench there, and talked first of style among writers, toward which I, reluctantly aware that I had none, was vigorously venting my contempt. "Style," I enunciated, "is the man." He warmly agreed, and a little later in the conversation he advised me who had said so first. (Memory accommodating ego, I have forgotten who it was.)

I asked him his opinion on something I was doing that was troubling me. When I came across words I liked the sound of but either did not know or did not have, I was writing them down for going back to. Bedichek at once warned me that words consciously learned pop up later when they're not appropriate and tempt you to twist your meaning to fit them in. I defended myself, though uneasily, by telling him about an image I had read of Dylan Thomas gathering in words new to him like a butterfly collector, and by describing my standards for accepting or rejecting words. In my notes I find an injunction, "Don't use a word for its own sake." Mr. Bedichek had the last but kindly laugh when, in a review of his "Educational Competition," I disastrously misused a butterfly-word I had collected. He wrote me a two-page letter appreciating the review, never mentioning the mistake (which came to my attention in a nightmare I had); when I went over to apologize, he hardly let me finish and said laughing: "Don't admit it—blame it on the printer! All printers are liars anyway. Whenever I made a mistake on my paper in New Mexico, it was always a typographical error." He knew that tension about mistakes meant tension about life. Once he wrote to defend me against my self-criticism for neglecting, in part by failing to publish, a gifted but eccentric Austin writer: "I have more cause for conscience concerning this man than you have, but I don't let my derelictions, real or fancied, dog me around."

II

The last summer of the drought he took me into the hills and taught me how to camp.

* * * * *

We camped in a small grove of oak trees on a broken meadow. Across a clearing there was an abandoned 1-room log cabin, 50 or 60 years old, with whose former inhabitants we commiserated; beyond, down an incline, were mysteries Bedichek reserved for the morning. He dug a trench in the ground a foot wide and several long and built therein a strong fire. After we set up the bedding he began methodically preparing supper (he said he liked to linger over "scaring up a good meal of vittles"). This was my introduction to sardines on lettuce with a cold beer, to his celery soup, and to potatoes and apples wrapped in wet brown paper, then in wet tinfoil, dipped in the water, and steamed in the coals. He washed the fruit first, and he completely soaked the paper before wrapping it around; he put the brown paper on first because he believed tinfoil might impart harmful chemicals to the food in the baking. In just such details as these, and with patience as natural as the alternating sounds and silences of camp talk, he unanswerably reproached the clocks, traffic, agendas, vibrating appliances, fancy fishing lures, expensive boats—all the assorted urgencies of work and rest by which we mostly live.

As the night became firm around us and the stars appeared we settled into steady talk across the fire. Women; the struggle for existence; psychiatry, in which he had a deliberately naive curiosity; public men; the contamination of vegetables by sprays in the fields and on the supermarket counters; literature; his early days—his subjects mostly. Some time before we went to bed we walked out into the clearing and he named many of the stars. I remember us, an old man and a young man, standing together on that balded clearing, looking at the full heavens and wondering on the vanities and illusions of mortal life.

In the morning we began a routine we repeated the 2 or 3 days we were there. He took me around a stone field wall, past some kitchen middens (grown over since the scientists had been there), to a ravine where a spring rose. He had brought us here because of this spring, the only fresh water for many miles around, and therefore an attraction for birds and animals as well as us. The rancher who owned the land had built a small water tank, about 8 feet across and chest-high, in which to capture the flow. Bedichek said the spring had once been strong, and the ravine a flowing creek, but our visit, at the end of the drought, there was only a timid run of water from an inset in the bank, some of it trickling over ground it blackened and disappeared in, the rest replacing the evaporation from the tank. He showed me the tracks of deer and squirrels in the mud from the night before, and then stationed us behind brush and trees across the ravine. We waited, the birds came, we looked at them through binoculars.

* * * * *

III

From our talks on this trip ensued an active correspondence of a month and a half. I sent him, on a point we had discussed, a remark by Thoreau in a letter in 1848: "In what concerns you much do not think that you have companions: Know that you are alone in the world." He replied on October 20, 1956:

"Set the Thoreau quotation beside the verses I quoted to you from the Persian poet: 'Do as thy manhood bids thee do,' etc. You see both indicate the isolation of the person who means to amount to something in the world. Your man, Donne, said 'No man is an island'—quite so—every man has and must have contacts, but there are some areas, there are sacred places; 'in what concerns you much' you are alone."

The Persian's verses he had quoted from memory, and then repeated that I might set them down:

"Do as thy manhood bids thee do, from
none but self expect applause,
He noblest lives and noblest dies who makes
and keeps his self-made laws.
All other life is living death, a realm where
none but phantoms dwell—
A mind, a breath, a sign, a voice, a tinkling
of a camel's bell."

* * * * *

IV

"As to camping, Ronnie," ran the note from him the Christmas season of 1957, "I have selected a summit with a positively Pisgah lookout from which with night closing in and the stars bobbing up over the horizon we might gain authentic tidings of invisible things." Like a youth summoned by Socrates, I prepared at once to go. He was 78 then, and I was 27.

"Mount Pisgah" was a gradually rising hill, plateaued at the top, from which we could survey the hills and valley of the region, which was about 20 miles southwest of Austin. We camped down the hill, at a place where it splayed out onto a level area. Our fire was enclosed (but not closely) by oak mottes on two sides, Bedichek's Dodge pickup on a third, and on the fourth, a distance off, a windmill and water tank.

The first afternoon a steel bar which extended forehead high from the tank malignantly knocked me flat on my back. Bedichek was solicitously alarmed and I confessed a pain on my forehead. When, the next morning as we walked toward the camp from our cots, the same bar smote Bedi and he fell to his back as violently as had I, he cursed, laughed, and did not confess a pain.

A drizzle set in all night and the next day soaked us unobtrusively. We were obliged to hug the fire, toasting towels and wrapping them around our heads, structuring the wood against the morning wind, making the best of life under the unfriendly gray sky. What we lost in nature study we gained in what Bedicheck has called animal enjoyment, the smell and warmth of the fire, the comradeship against the inhospitable weather, and the steady alternation of talk and hot food.

I shall always remember the large pot of celery and potato soup he made that night, for it kept us warm and full deliciously, which is all a soup can do. I still have his recipe: "Chip potatoes, slice up the onion, slice up the celery, cook thoroughly. Thicken with a little flour and milk. Drop in a little oleo—then remove from heat when boiling and put in two beaten eggs. S. & P." Serving it up, he said, "Well, boy, if you don't like this mess, you can at least know it's perfectly good for you."

The oak, mesquite, and cedar we were burning were pungent in the fresh washed air, and he said, "I love these smokes. That's a choice smoke." All night and the next day the wind agitated the windmill, and her soft creaking and whining kept our minds stirred. * * *

For lunch in the drizzle we had celery soup, dry barbecued beef, toast, and beer. He said to the fire, to me, to the place we were: "O life is so wonderful if you just look at it right. How wonderful to be able to sit out in the open and eat a wholesome meal." With sureness and lyric feeling he recited:

"Ah! my beloved, fill the cup that clears
Today of past regrets and future fears—
Tomorrow?—Why, tomorrow I may be
Myself with yesterday's Sev'n thousand
years.

"Lo, some we loved, the loveliest and the
best
That time and fate of all their vintage
prest,
Have drunk their cup a round or two before
And one by one crept silently to rest

"And we, that now make merry in the room
They left, and summer dresses in new
bloom,
Ourselves must we beneath the couch of
earth
Descend, ourselves to make a couch—for
whom?"

"Lame Duck?"—Record Refutes It

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. SCHWENGEL. Mr. Speaker, a recent editorial in the Davenport (Iowa) Daily Times, concerning the present strong position of President Eisenhower and his firm control of the affairs of States, points up a situation which has won the acclaim of a great number of citizens to whom the lame duck label connotes ineffectiveness.

Believing that President Eisenhower is establishing a precedent which can be followed by others whose tenure is limited by law, I subscribe to the points made in this editorial, and under leave to extend my remarks, ask that it be printed in the Appendix of the RECORD.

"LAME DUCK?"—RECORD REFUTES IT

New Dealers have always smarted over the restriction of a President to two terms since it was a constitutional amendment enacted as a result of the unprecedented four terms of Franklin D. Roosevelt.

Thus when President Eisenhower began his second term he was branded by New Dealers and correspondents sympathetic with them as a "lame duck" President.

They ignored the fact that every President until Franklin D. Roosevelt had been a "lame duck" President since the tradition of the country was to accord a President no more than two terms.

Even General Grant, who would have taken a third term, was unable to break that tradition.

But what about this "lame duck" business? So far as President Eisenhower is concerned it is shown to be a fraud.

Roscoe Drummond writes:

"These 4 years, from 1957 to 1961, are an unprecedented period because we have been testing for the first time the effect of the anti-third-term amendment upon the functioning of the Presidency.

"This 4-year period is also unprecedented because for the first time a President has been confronted through the entirety of his second term with a Congress controlled by the opposition—a Democratic Congress thrice elected with increasing majorities during a Republican Presidency. It had never happened before.

"And what has actually been happening—and why? It seems to me already amply evident that when the historians come to write the history of 1957 to 1961 they will almost unanimously agree:

"That Dwight D. Eisenhower has proved a constitutionally 'lame duck' President does not have to limp to the exit of his second term, that he can grow in power and political effectiveness, and that in so conducting himself Mr. Eisenhower has helped future Presidents faced with similar circumstances.

"The influence of the White House during Mr. Eisenhower's 'lame duck' term has increased rather than dropped. It seems not to have been hurt by the anti-third-term amendment; perhaps helped by it because of the special detachment which comes to a President when he knows he can't run again. 'I am not so much thinking of public images as I am of the public good,' he said at a recent press conference. His popularity rapidly rebounded after the Republican congressional defeat last fall. He is pretty much having his way with the Democratic Congress this year. It is a remarkable performance."

The point is that President Eisenhower is using the power inherent in his office to gain his administration's aims from Congress.

Under the regime of Sherman Adams, President Eisenhower was isolated from the stream of Republican congressional thinking. Had that continued, his success in the present congressional term would have been doubtful.

Also, Senator Dirksen of Illinois has taken the place of the unmovable Senator Knowland of California as G.O.P. leader in the Senate, and Representative HALLECK of Indiana has taken the place of the equally unmovable Representative Joe Martin as G.O.P. leader in the House.

With Adams out of the way, Dirksen and Halleck have access to the White House which makes for functioning of Republican leadership in smoother manner than ever before in Eisenhower's administration.

It is not only in the domestic field that President Eisenhower has taken personal command but also in the field of foreign relations. That was thrust upon him by the death of Secretary Dulles who, more than any other Secretary in history, made and executed policy.

The label "lame duck" is a misnomer. It is well that should be true in the first application of the constitutional two-term restriction. It has taken all the steam out of proposals that the amendment be rescinded.

Government Created Farm Problem

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. DEROUNIAN. Mr. Speaker, the statements made in the following article, which appeared in the June 22 issue of Newsweek, are undeniably accurate. When is the Congress going to do something about them?

THE EGG IN POLITICS
(By Henry Hazlitt)

A crisis has developed among the poultry farmers, the result of a huge overproduction of eggs. Eggs have been selling in recent months below their cost of production for most small farmers. The result, as usual, has been pressure on the Government to solve the problem, and the Department of Agriculture has been forced to promise to step up its egg-buying program. It has already bought some 500 million eggs, dried or frozen, and perhaps the race has just begun.

Of course the effect of this program, to the extent that it is adequate, can only be to encourage continuance of overproduction. Without this Government buying, adjustments would soon set in to bring the overproduction to a halt. But, at least as far as farmers are concerned, most politicians consider the adjustments brought about by supply and demand as too callous and cruel; every farmer must at all costs be protected from them. The Congressmen who take this view do not see that what they are refusing to accept is the whole principle of the free market, which is the central principle of free enterprise.

WHAT FREE MARKETS DO

It is the principle of the free market that regulates the relative price and production of thousands of different commodities to meet the relative wants and consumption of millions of consumers. When there is too little of a desired commodity, the demands of consumers will lift its price relative to other commodities; and more of that commodity will be produced because of the higher profit margin, until the price falls again. When there is too much of a commodity, its price will fall below the previous marginal cost of production, and the highest-cost or least-efficient producers will have to turn to something else.

This sometimes means great hardship for the individuals affected. But this finely graduated system of rewards and penalties, of incentives and deterrents leads in the long run to the greatest production, growth, and general welfare provided by any economic system. And this same system which politicians think "intolerable" as applied to farmers, is in fact accepted in nearly all other fields. The annual figures of industrial failures are a constant reminder. Government studies have shown, to cite only one statistic, that only three-fifths of firms in retail trade survive their first year, and only a sixth reach the age of 10 years.

The practice of price support must involve favoritism. It simply cannot be universalized. We cannot subsidize everybody at the expense of everybody else. One of the very things that the egg farmers are chiefly suffering from, in fact, is the price supports and subsidies to the grain producers. These have raised the price that poultry raisers are forced to pay for feed. Nothing could help the egg farmers more than the termination of price supports on grain.

FIASCO IN WHEAT

The price-support program in wheat grows more and more fantastic. In a statement on June 1, President Eisenhower pointed out that the existing program had piled up $3 billion worth of wheat, a supply equal to 2½ times our annual domestic needs; that storage, handling, and interest charges alone for this wheat will cost the American taxpayers close to half a billion dollars during the next fiscal year, and that "continuation of this legislation for another year leads the wheat program one step closer to disaster."

These programs, which increase the price of feed for cattle and poultry raisers, and the price of food for city workers, are costing the taxpayers some $6 billion a year. Grain farmers are growing crops for Government storage rather than for markets. The Wall Street Journal reports that some farmers are even deliberately growing inferior-quality wheat in order to take advantage of the Government's generosity.

Secretary Benson's proposed solution is to reduce the price support to 90 percent of the average market price for the 3 years preceding the crop year. This would certainly reduce the dimensions of the problem. But any price support at all, to the extent that it is effective, must encourage excess production and storage. Today's farm problem is Government created.

The President and Public Works

EXTENSION OF REMARKS
OF
HON. LAWRENCE BROCK
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. BROCK. Mr. Speaker, the Subcommittee on Public Works and the House Appropriations Committee spent laborious hours and days in consideration of the various items in the public works appropriations bill for 1960. In

their wisdom, based on the practical experience and knowledge of such matters, gained over the past years, they recommended to the Congress those projects meriting immediate approval. This action was not taken haphazardly but only after painstaking hearings and consideration of all the factors involved. Their work may best be described as separating the wheat from the chaff. When their work was finished and reported to this House, the recommendations of the committee were accepted by passage of the bill. It was also passed by the Senate, with some amendments, and now rests in conference.

My own State of Nebraska has several meritorious long-range projects that are urgently needed for water development and flood control. These particular projects came under the minute scrutiny of the committee and were approved as necessary to the welfare of the State and the Nation. Their construction will prevent further loss of life and property in the areas affected now by these adverse conditions.

Despite the action of the Congress, we are now informed of the impending threat of a Presidential veto. This action on a much needed piece of legislation, one that will preserve and expand our natural resources, is unthinkable in these days of the greatest prosperity in our national history. There could be no better time than now to undertake this work that is so vitally necessary and indispensable to the welfare of our people who have been waiting many years for their Government to act in their behalf.

My feelings in this matter are aptly described in the attached editorial, published in the Lincoln (Nebr.) Evening Journal and Star Journal, under date of July 23:

THE PRESIDENT AND PUBLIC WORKS

For the long-range good of Nebraska and the Nation, it can be fervently hoped that speculation of a Presidential veto of the public works appropriations bill will not come to pass. This provides money for flood control and irrigation projects on which construction is either underway or ready to begin.

President Eisenhower has waged a valiant and winning battle this year to hold Federal expenditures in line with its revenue. For this he is to be commended. But to carry this fight to the point of blocking urgently needed water development projects would be both unwise and unwarranted.

The President's most effective weapons in opposing other Federal expenditures has been that they are for programs that should be financed by private sources and that they call for much larger appropriations than asked by the administration. But neither of these arguments is valid against the public works bill.

The gigantic task of building dams and other structures to control water and put it to gainful use obviously cannot be attempted by a few individuals. Only the Federal Government can be expected to accomplish this.

On the second point, funds in the House bill were virtually identical with the administration request and the Senate bill was only $80 million larger, a relatively small amount in such a large item in the Federal budget. Mr. Eisenhower's veto-hinting remarks on the public works bill came before a Senate-House conference committee had even been picked to arrive at a final figure.

Much of the President's ire apparently stemmed from inclusion by both the House and Senate of money for what the administration regards as new projects.

To suggest that this mighty Nation, in a time of almost unparalleled prosperity, cannot afford to move forward with programs that will add materially to its future economy and to the protection of its people, is to adopt the brand of negativism which so often has hampered national progress and reacted unfavorably against the Republican Party.

In Nebraska, further delay in such flood control projects as the Salt-Wahoo around Lincoln and the Gering Valley in the Panhandle can only mean more misery and loss of property, and possibly lives, as floodwaters go unchecked.

Interruption of irrigation projects such as those in the Republican and Loup Valleys will mean deferment of economic benefits to the State—and to the Federal Government in the form of increased taxes—as well as rising construction costs due to the erratic flow of funds.

Surely the President will realize these facts and approve the public works appropriations when it reaches his desk.

That Horrid Word

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the Appendix, I am pleased to include an editorial from the Omaha World-Herald of July 19. I believe the discussion of "newspeak" will interest my colleagues in its relation to present-day affairs rather than 1984:

THAT HORRID WORD

In his grim piece of fiction, "1984," Author George Orwell predicted the collectivist language, "newspeak," would supplant all others.

In "newspeak" bad words are eliminated by using their opposites. Thus slavery becomes freedom, dictatorship becomes democracy, and a lie become the truth.

The Soviets have already made remarkable progress in that direction and some people in the United States are also making headway.

For example, Government spending is vastly unpopular with the voters and every politician and commentator is aware of it. The Johnson-Rayburn wing of the Democratic Party is most sensitive to trends and is trying to prevent the spending label from being pinned on the Democrats. Joseph Alsop, who is obviously sympathetic to their cause, explains it this way:

"In the matter of the budget, for instance, Mr. JOHNSON is by no means wedded to the President's view that the American economy will faint and fall if Government investment is substantially increased. But he rightly holds that the Congress cannot make a comprehensive new attack on the gigantic problem of Government investment.

"Congress can pass swollen appropriations bills, of course. But only the President can take the initiative to revise the tax structure. Only the President can do all the complex difficult things which certainly must be done before Government investment can be increased with safety."

Mr. Alsop is of course talking about Government spending. But spending is a naughty word, so he uses a solid, respectable word in its place.

Thus the sums squandered and allegedly stolen on foreign aid in the Kingdom of Laos, for example, are covered by the nice sounding word, "investment." Every domestic grant-in-aid program, no matter how extravagant or nonsensical, is an "investment." When the armed services pay millions more than a defense contract should rightfully cost, that's an "investment." Every subsidy, every porkbarrel measure is an "investment."

Maybe Mr. Alsop and the liberal spending brethren can get away with using their nice word to disguise spending, but we doubt it. Americans are not as stupidly complacent as some politicians would like them to be.

Government spending is still Government spending. And it is not yet 1984.

Dixon-Yates Vindicated in Courts

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. DAGUE. Mr. Speaker, the recent action of the U.S. Court of Claims in validating the damage suit of the Mississippi Valley Generating Co. against the United States confirms our early analysis of the fragile tissue upon which certain public power proponents have based their attack on the Dixon-Yates contract.

The most significant phase of the decision upholding the Dixon-Yates proposal was the sweeping denial that there had been a conflict of interests in the action of Adolphe H. Wenzell who served as an advisor to the Government in the development of the contract at a time when he was on the payroll of the First Boston Corp., one of the financial agents for the Dixon-Yates interests. It is also extremely interesting to note that the presiding justice who handed down this decision is Judge Joseph W. Madden, an appointee of Franklin D. Roosevelt and therefore presumably without bias toward the Tennessee Valley Authority.

What we had in Dixon-Yates was an honest attempt to avoid an expansion of TVA to the detriment of the free enterprise production of public power. Most of us today are persuaded that TVA should be permitted to operate in the area now included in its network but that its operations should be wholly financed from its own revenues, subject of course to periodic review by the Congress.

In the Dixon-Yates controversy the only point at issue was the contracting for privately produced electric current necessary to compensate for that furnished the Atomic Energy Commission by TVA. Happily this matter was resolved when the city of Memphis determined to build its own municipal powerplant thereby releasing the needed extra power. Incidentally, it will be interesting to note the reaction of the citizens of Memphis when they find that they will have to pay the full cost of the electric current they may consume.

One of the weapons used in the attack on Adm. Lewis Strauss was his alleged involvement in the Dixon-Yates contract and the suggestion that he had not acted in the public interest. The Court of Claims in its decisions identifies such charges as sheer demagoguery and it is regretted that the decision had not been handed down in time to blunt the attack against this outstanding public official.

U.S. Defense at Sea

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Hanson Baldwin, which appeared in the New York Times on Sunday, July 26, 1959:

U.S. DEFENSE AT SEA—SUBMARINE HUNTER FORCE ILLUSTRATES THE RAPID EVOLUTION OF DETECTION GEAR

(By Hanson W. Baldwin)

Task Group Bravo, Rear Adm. R. J. Stroh commanding, which arrived in New York Thursday night, is part of the continuous watch against submarines maintained by the U.S. Navy.

The aircraft carrier *Wasp*, Admiral Stroh's flagship, and Destroyer Squadron 24, consisting of the destroyer *Blandy* and six escort destroyers, docked here for a brief visit. An attached six-plane unit of Patrol Squadron 56—six Martin Marlin P5M–2, land-based patrol planes—remained at their normal base at Norfolk, Va.

Task Group Bravo, which was former in October 1958, is the second unit of its kind in the Atlantic Fleet; the other unit is Task Group Alpha.

ON CONSTANT ALERT

One or the other of these units is always in an alert status, ready to investigate submarine contacts. They comprise the "huk" groups, or hunter-killer forces of the Atlantic Fleet, a mobile team of surface and air units trained to detect and attack submarines.

They represent part of the growing American defense against the threat of the submarine.

Task Group Bravo, which has developed a high morale and team purpose in its short life, has very little of the newest anti-submarine equipment, most of which is still under development or in process of installation aboard new or modernized ships.

But its recent performance during the North Atlantic Treaty Organization Exercise Riptide, off the Carolina coast, demonstrated that it had developed effective methods for dealing on the high seas with conventionally powered submarines.

FACES THREE PROBLEMS

There are three primary problems in ASW or antisubmarine warfare: Detection, identification, and destruction. The hardest of these, by far, is detection.

The state of the sea—whether or not there are whitecaps that can hide a periscope or a snorkel—and the temperatures of the ocean at the surface and beneath it can affect importantly the chances of detection.

No one method of detection suffices, and all of them together are not really satisfactory.

Radar does not penetrate the surface of the water. Radarscopes used against low-lying objects in the water are cluttered up, particularly in rough weather, with a phenomenon called sea return, which blotches the scope with white and hides the target.

Sonar, the sound ranging and detection, has a very limited range; the instruments must usually be within a mile or so of a submarine if there is to be much hope of detection.

A fixed-wing plane, moving rapidly through the air, cannot trail sonar gear. Surface ships can utilize sonar but at high speeds their own propellor noises or other extraneous sea noises interfere with the accuracy of the sonar.

SONAR BUOYS USED

Helicopters can use dunking sonar, and fixed-wing aircraft can drop sonar buoys that will relay information picked up in the ocean's depths by radio to the plane. But sonar, in addition to its limited range, is subject to major inaccuracy.

Ocean temperatures are by no means uniform. Sometimes, unpredictably, water temperatures will drop sharply, perhaps as much as 5° as the depth increases by 10 or 20 feet.

This sudden thermal change acts on sound as water does on light; it refracts it and the readings of the sonar become inaccurate.

Submarine commanders know this; they hunt out and hide immediately beneath a thermal layer, often protected, if the layer is deep enough, from the sonar sentinel above.

Still another detection instrument—the magnetic airborne detector—or MAD, used in fixed-wing aircraft, records the passage of the plane over any metal body in the ocean.

In deep water, its readings can provide a pretty sure indication of a submerged submarine.

But MAD's lateral range is very limited, and in shallow water it will pick up wrecks as well as submarines.

NO METHOD ADEQUATE

There is thus some major limitation to all the present standard methods of submarine detection; none of them is adequate; all must be used together.

Task Group Bravo utilizes what is generally available to the Navy today. The *Wasp* carries 20 Grumman S2F Tracker aircraft.

These twin-engined planes, with a four-man crew, carry radars, MAD gear, sonar buoys and homing antisubmarine torpedoes. They have long range and are designed for low altitude flying; they rarely search above 2,500 feet.

Fourteen Sikorsky HSS–1 helicopters, with "dunking sonars"—a sonar ball on the end of a wire cable, which can be reeled in or out, complement the fixed-wing aircraft.

The helicopters can fly rapidly to the scene of a reported contact, get into hovering position 25 to 35 feet above the sea, lower their sonar well beneath the surface and listen for the submarine.

CAPABILITY WIDENED

Six of the *Wasp*'s helicopters are equipped with automatic stabilization equipment, which when fully perfected, will give the helicopter a night and all-weather capability.

A later model of the Sikorsky, the HSS–2, will have a boat hull that permits landing on the sea, will be turbine driven and will have an improved sonar, which can be lowered much deeper than present gear permits.

The *Wasp* also carries four Douglas AD5W "guppies," or radar-equipped planes to use for communication and radar relay between the S2F's and the helicopters and the ship.

The destroyers in the task group, equipped with sonar, radar and antisubmarine weapons, take longer to reach a scene of contact, but have greater endurance.

The land-based P5M–2 aircraft, far larger than the carrier type, have better radar and navigational facilities, longer endurance and better all-weather capabilities.

All these different types of weapons are integrated into Task Group Bravo and work as a team to defeat the hidden undersea menace.

Mrs. Robert H. Mahoney

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. DADDARIO. Mr. Speaker, last week in Washington, there was held the funeral of a remarkable woman. She was Mrs. Robert H. Mahoney of Hartford, Conn., who was the immediate past president of the National Council of Catholic Women.

Mrs. Mahoney's honors were innumerable, and the hundreds who grieved at the cathedral here were conscious that they were mourning an exemplary American. But I could not help reflecting on the work she had done in her home community. Metropolitan Hartford is the richer for the time and effort she contributed to solution of its social problems. She was vice chairman of the Hartford Housing Authority and chairman of the Committee on Housing for the Aged. She was active in educational studies and president of the Connecticut Conference on Social Work. While meeting her national responsibilities, she was never too busy to attend meetings of those organizations with which she had spent so much time. The story is told of one meeting in which someone who arrived early found her sweeping the floor of the hall—just a chore she had undertaken to help get ready.

The sermon at the funeral here was delivered by Archbishop O'Boyle. I believe everyone could gain an insight into the character, integrity, and leadership of an outstanding American by reading it and I commend it to all Members:

SERMON OF ARCHBISHOP O'BOYLE AT FUNERAL OF MARY HANNAN MAHONEY, ST. PATRICK'S CHURCH, JULY 24, 1959

"Therefore, by their fruits you will know them." (St. Matthew, 7: 20.)

Some 53 years ago, Mary Hannan was baptized and made a child of God in the faith of our fathers at St. Matthew's Cathedral. She was born into a family where the relationship between God and man was clearly defined and religiously observed. In such a holy environment, she learned what every Catholic child is taught, that we are placed in this life to know, to love, and to serve God and by so doing, to be with Him in the life that is eternal.

As she grew older, the Christian meaning of life took on added significance. She learned that all things earthly are passing; that we do not have here a lasting city; and that one day God will call upon us to render an accounting of our stewardship and, particularly, to give an accounting of the use of the talents with which He has endowed us. Mary Hannan Mahoney was a highly talented person, but she was also a humble soul who realized that what she had was

from God and to Him belonged the honor and glory for whatever was accomplished.

Although the church in her wisdom leaves the judgment of a soul to the infinite goodness and mercy of its Creator, I think that it is profitable to make a few observations that may be of benefit to us.

The life of this good woman was a vindication of the rewards of charity. Charity, the love of God that expresses itself in our devotion to all His creatures for His sake, was the dominant and controlling force in her life. Her education, which included an M.A. degree at Trinity College and a doctorate at Catholic University, was used to forward the work of charity in every aspect of life—personal, domestic, community, national, and even international. The use of that education ranged from conducting study clubs in her parish in Hartford to arranging programs of benefit to international groups such as the United Nations.

The mere cataloging of the activities of Mary Mahoney is an indication of the response that this charitable endeavor received from every group in the community. In her fairly short span of life, she served in high office on 15 boards of various organizations. She served, because every one of them contributed in a special manner to the spiritual, civic, and social welfare of her neighbor. Besides serving on the boards of many Catholic institutions, she was vice chairman of the Hartford Housing Authority, and chairman of the Committee on Housing for the Aged. Her active interest in the field of education caused her to be named a member of the Connecticut Council of Teacher Education, a delegate to the White House Conference on Education, and a Presidential appointee to the National Planning Committee for the 1960 White House Conference on Children and Youth. Her active interest in charitable organizations resulted in her being elected the president of the Connecticut Conference on Social Work.

Possibly her most rewarding work and which absorbed her interest even to the exclusion of her physical ailment was with the National Council of Catholic Women. She had long been interested in many phases of its work as well as allied fields of endeavor, such as the Catholic Association for International Peace, of which she served a term as vice president. After many years of active work, she became the president of the Connecticut Council of Catholic Women and then was elected the national president of the National Council of Catholic Women in 1957.

During her term of office, the national council prospered. Probably the greatest contribution she made to the work of the national council was her truly Catholic mind which showed concern for all peoples even in the most remote parts of the world. As the international relations chairman, she conducted an excellent educational program on the United Nations and its many specialized agencies covering many meetings at the U.N., to observe for the National Council of Catholic Women and exemplified this interest in the number of foreign visitors she entertained in her home even during her busy tenure. As national president, women from Germany, Austria, Italy, Asia, and a woman chieftain from Nigeria were among those to whom she extended a friendly and heartfelt welcome.

The Madonna program, launched under her superb leadership, extends today from the Casbah to Calcutta. Clinics having a Christian and, therefore, positive program for the well-being of mothers and children, are operating today in Italy, Korea, West Indies, Mexico, India, and Algiers because she and the Catholic women associated with her believed so strongly in preserving and not destroying infant life.

But this work was her salvation. Charity carries its own reward in this life as well as the next. It was the work of the National Council of Catholic Women that literally carried her through her illness. She knew of her illness as early as last July and by the time of the national convention in September, she could scarcely walk. The interest in the program, especially in those phases dealing with the plight of mothers and children oversea, invigorated her so much that she was able to attend the convention and carry out all her duties, which included speeches and a reception for 2,500 persons.

Charity has a strange way of evoking a response. As a school child in Washington, Mary Hannan helped in the work of the Christ Child Society established by Mary Merrick, and later, as national president of the National Council of Catholic Women, she spoke at the luncheon held in honor of the 50th anniversary of the Christ Child Society. The charity that helped Mary Merrick for so many years was the support of Mary Hannan Mahoney for the last difficult months of her life. Difficult as those months were for her, I am sure she realized they were also difficult for those near and dear to her. In her sick room, she was the most cheerful person of all; on more than one occasion, she said, "After all, the only way to go to heaven is by dying."

Naturally, we are all saddened by the death of this great and noble woman, and we extend our sympathy to her dear husband, to her devoted parents, and to the members of her family. But we must do more. Let us pray, that Mary Mahoney, who during life filled her hours and days with Christ-like works of charity, may now be led by the angels into paradise, her true and eternal home, to be with Christ and Mary, His Mother, forever.

More on Debt Management

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. CURTIS of Missouri. Mr. Speaker, following is another editorial which I wish to call to the attention of my colleagues. It is entitled "Undermining the Dollar" and appeared in the Washington Daily News, July 20, 1959:

UNDERMINING THE DOLLAR

Funny money is the problem in congressional maneuvering over interest rates.

An insistent minority would run the printing presses to pay the Government's bills. They've been trying for years with occasional successes. Present high living costs, identified as inflation, are substantially the result of their work.

These are the people who squawk about "tight money"—meaning efforts to stop price increases by further dilution of the currency.

This "loose money" faction isn't numerous enough in this Congress to enforce its prejudices. But there are enough in Congress who don't understand, or don't care to make it dangerous.

The printing press influence is obvious in the Ways and Means Committee suggestion that it be the "sense of Congress" that the Federal Reserve, "while pursuing its primary mission of administering sound monetary policy * * * should, wherever feasible, bring about needed future monetary expansion by purchasing U.S. securities of varying maturities."

This is like telling the Federal Reserve: Go out to swim but don't go near the water. Open market bond buying by this agency—with money created out of thin air—is the direct opposite of sound monetary policy. The practice was abandoned back in the Truman administration but its evil effects live on in the high cost of living plus the constant menace of further inflation.

Any such "sense of Congress" as is proposed would advertise to the world that we haven't learned our lesson—that our responsible lawmakers are toying with the idea that the value of the dollar may be cheapened still further. This could have disasterous effect, both on prices at home and in our dealings abroad.

We hope that, whatever else Congress may choose to do about interest rates, it will eliminate this inflationary advice to the Federal Reserve.

Increasing Textile Imports, a Threat to Domestic Cotton Producers and U.S. Textile Industry

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. OLIVER. Mr. Speaker, the Secretary of Agriculture has under consideration at present a request for administrative action which could lead to a solution of the problem besetting the Nation's textile industry.

The problem, as you know, concerns the uncontrolled imports of textile fabrics and garments that exert a depressive influence on an important but declining domestic industry.

There is no need for me to recount the statistical proof of the adverse effects of imports on the industry. That was presented last year before the Interstate and Foreign Commerce Committee of the U.S. Senate during a special inquiry. The facts of the case prompted the committee to make certain recommendations for remedial action.

One of the recommendations called for the establishment of quotas by specific categories for textile products. The purpose was to enable foreign producers of textile products to sell in our markets within limits which will not further endanger the existing capacity of the domestic textile industry.

This, in my opinion, is a realistic and reasonable position. It certainly does no violence to our national policies of stimulating world commerce, of helping our friends in the free world, and keeping our economy sound.

The quota recommendation can be implemented either legislatively or administratively. Inasmuch as Congress already has provided the machinery through which quotas can be established by administrative action, this machinery should be used.

We are reminded that when the Congress enacted the Agricultural Adjustment Act of 1933, to help the Nation's farmers attain a measure of stability,

provisions were made to protect the programs and keep them effective.

One such provision enabled us to control the imports of farm commodities and products thereof. Not only was it deemed desirable, but also imperative. We were intent on supporting the earnings of our own farmers, not those of the entire world. There had to be a limitation, and the limitation was expressly provided.

Section 22 of the act was used to limit the imports of American upland type of cotton to about 29,000 bales annually. It was determined that imports in excess of that figure surely would impair the program under which the American-grown cotton crop could be supported. For more than 20 years such a quota has been in force. The raw cotton import quota arrangement serves also to protect another farm program, the one under which U.S. raw cotton may seek its traditional share of the world market.

As we all know our cotton price-support program produced a situation in which American cotton was priced out of the world market. Cotton production elsewhere in the world expanded explosively and began meeting world needs while cotton surpluses mounted here at home. We then cose to subsidize cotton exports and once again American cotton began moving abroad.

Much of this cotton, however, has been returning to this country in the form of textiles, the amount last year reaching a figure more than ten times greater than the amount of raw cotton which is regarded as interference with our farm programs.

It appears crystal clear to me that if our farm programs can be imperiled by the imports of X bales of cotton, they certainly are imperiled by the imports of 10 times X, whether the cotton is in bales or in the form of textiles.

Right now, however, we are on the eve of increasing still further the amount of the subsidy on raw cotton exports. The Secretary has decreed that on August 1 the subsidy will be boosted from about 6½ to 8 cents on every pound of American cotton sold abroad.

This means that the disparity between the price American textile mills must pay for American cotton and the price to their foreign competitors is widened further.

Mr. Speaker, is it any wonder that some of us raise the issue of fairness?

It is significant that the request pending before the Secretary was initiated by the National Cotton Council, the only organization in the country which represents the cotton growers, the ginners, the merchants, the warehousemen, the cottonseed crushers, and the cotton spinners. It speaks for our cotton industry as a whole.

This organization recognizes that the domestic textile industry is the victim of an unfair situation. And the council in its petition said:

> The strong feeling which is being engendered by this unfairness will inevitably work injury to U.S. cotton. It undermines the confidence of the textile manufacturer in the integrity of cotton as a source of raw material supply, and it tilts his thinking in the direction of the synthetic fibers as he makes the long-range plans and commitments which will determine how much cotton is used in this country in future years.

Mr. Speaker, the Secretary of Agriculture is being asked only to recognize the situation as it truly is. Once he faces up to it, he is required to so advise the President. Under the law, the President can then call for the Tariff Commission to make an investigation and come forward with recommendations.

It is my feeling, and that of many of my colleagues, that a thorough investigation of the cotton import problem can lead only to recommendations for a quota arrangement on cotton textile imports.

It is my hope that the Secretary will take the first steps in this direction.

Oregon Residents, Mr. and Mrs. Walter A. Woodard of Cottage Grove, Visit With Dr. Albert Schweitzer in Lambarene, French Equatorial Africa

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. PORTER. Mr. Speaker, Dr. Albert Schweitzer at the age most citizens of this world are taking it easy is working every day in his hospital for the native of French Equatorial Africa.

He recently spent part of a typically busy day visiting with 16 men and women who had traveled hundreds of miles to Lambarene in the hope they would get to see him. They did.

Two of these travelers were Mr. and Mrs. Walter A. Woodard of Cottage, Grove, Oreg., a city in the congressional district I represent.

Their impressions and information were put into an excellent feature story by Mrs. Kay Lundeen, women's editor of the Eugene, Oreg., Register-Guard. Good reporting is typical of Mrs. Lundeen.

Under leave to extend my remarks in the RECORD, I include her story which appeared in the July 17, 1959, issue of the Register-Guard:

WOODARDS DESCRIBE VISIT WITH SCHWEITZER

(By Kay Lundeen)

A visit with Dr. Albert Schweitzer in his remote bush hospital for the native of French Equatorial Africa marks the inspirational pinnacle of 200,000 miles of travel by the Walter A. Woodards of Cottage Grove.

"Meeting Dr. Schweitzer was an unforgettable experience," Mrs. Woodard relates. "You are impressed by his utter simplicity. To think that he is such a great man, carrying on his missionary work surrounded by natives and nature, with none of the trappings of civilization that denote success—it awes you."

The Woodards, who returned recently from their second round-the-world tour in 3 years, described this week how they were members of a party of 16 who traveled by ocean liner, chartered plane, jeep, ferry and native pirogues in the hope of getting at least a glimpse of the great humanitarian.

"We had no assurance when we set out that we would ever get to see Dr. Schweitzer," said Mrs. Woodward in an interview in her spacious and charm-filled home in a secluded acreage near Cottage Grove.

"The doctor makes no attempt to answer correspondence. His nurse explained to me that it would take all of their time if they did and he'd have to have secretaries to handle it. So we had received no answer to our letter and started out recognizing that he might be too busy to see us."

CHARTER PLANE

But the 16 travelers were willing to take that chance. They left the luxury liner on which they had been cruising at Pointe Noire in French Equatorial Africa—as she puts it, "the gateway to deepest, darkest Africa—realm of forest gnomes and saucer-lipped Ubangi women, steamling jungles, gorillas and unparalleled scenic beauty."

"We chartered a plane for a 4-hour flight into the jungle, then rode in a jeep 3 miles to the ferry," said Mrs. Woodard. "We crossed the Ogowe River by ferry. It's a wide, rushing river, full of crocodiles. Dr. Schweitzer's hospital settlement is on that river.

A jeep ride took them to Lambarene where the travelers found a 30-room hotel—"the accommodations are poor, but you expect that when you travel." Then they went by jeep for a couple of miles to embark in native pirogues for the journey along the Ogowe to the hospital.

"The pirogues are canoes hewn out of tree trunks by the natives," Mrs. Woodard related. "Only two of us could travel in one boat while the native guided us along with a single paddle. The heat was terrific—only one-half degree off the equator."

They landed at the river's edge on a lovely spot where the terrain was almost hidden in dense shrubbery topped by palms and mango trees. The hospital is built on a hillside in the majestic beauty of the jungle.

"How delighted we were when Dr. Schweitzer came to the landing to meet us." Mrs. Woodard reported with a glow of happy remembrance. "He talked to us through an interpreter—a nurse who has been with him for 35 years. He was very solicitous of us all the time and was interested in hearing about our trip."

DESCRIBES DOCTOR

Now 84, the doctor is rugger in appearance and action, says Mrs. Woodard. She added:

"He's tall and gaunt with a huge shock of hair for a man of his age. He strides along like he meant it. Yet he doesn't ever hurry and is very deliberate in what he does. He's a grandfatherly sort of person and particularly fond of children—that goes with his religion. In spite of all he's accomplished he has that human touch that naturally makes a great man."

Knowing they'd be thirsty, the doctor took his guests to a screened dining-room where he served them lemonade. He answered their question freely. He showed them his piano with organ pedals where he still enjoys playing his long-familiar Bach when time permits, perhaps once a week.

"Afterward he took us on a tour of the entire hospital area that lasted more than an hour," said Mrs. Woodard. "Dr. Schweitzer goes everywhere around the area on foot, there's no other form of transportation. Several times we came to pens with animals and he'd always stop to pet and feed them. The crowning principle of his entire philosophy is a reverence for all life, even that of insects. Knowing this, before we arrived we expected to be eaten up by mosquitoes, but we weren't."

In view of the primitive area the hospital seemed quite clean to the travelers. The native patients live there with their fami-

lies, the patients occupying cells while the family lives and cooks on the ground just outside. Each family is given a ration and cooks for themselves over an open fire on the ground, sort of a one-dish meal.

"The fires apparently help to keep away the mosquitoes," said Mrs. Woodard.

"The doctor's success is in letting the natives live their native life," added Mr. Woodard who had entered the room. "He has about 300 patients in the regular hospital and 150 in the leper hospital farther on up the hill. The lepers live alone in a room and do their own cooking."

The hospital with its corrugated iron building would be classed as fourth or fifth rate over here," said Mrs. Woodard, "yet when you stop to think of what Dr. Schweitzer can accomplish there it's wonderful." She added:

"He does have a good operating table, good equipment, and good light there operated by a small powerplant. Everywhere else kerosene lamps are used. We took him presents such as thermometers, bottles, and cotton materials, and he was very appreciative. It's hardest for them to keep bottles, the small ones they use to supply pills for the natives."

Dr. Schweitzer picked bananas for his guests from a tree he had planted when he first came there nearly half a century ago. He showed them his junglelike garden, the citrus trees he planted there many years ago on account of his health. Along a secluded path he took them to the grave of his wife who before their marriage had studied nursing so that as a young wife she could accompany him on his first missionery journey to Africa in 1913.

"His own designated space is beside his wife's grave," said Mrs. Woodard. "It seemed peaceful and beautiful—a cleared spot in the jungle, the ground covered with colorful plants that grow wild there. The doctor expressed the hope that after he was gone the hospital will go on. He has several Caucasian doctors there and has trained some natives, too."

At present there are three doctors and 14 nurses in addition to native helpers on the staff—"all dedicated to their work." One American is spending a year there just for the privilege of being with Dr. Schweitzer and the opportunity of studying there and going over his notes with him.

"All the natives know Dr. Schweitzer and are very fond of him, yet he maintains discipline," said Mrs. Woodard. "On Sunday for the chapel service he stands outside and reads the Bible, then explains it to those gathered to hear him. He is an authority on the Bible, you know."

GIVES AUTOGRAPH

After touring the hospital area, the 16 guests returned to the dining room for more welcome lemonade, tea and tiny, pretty sandwiches. Dr. Schweitzer signed his autograph for Mrs. Woodard "avec mes bonnes pensées." As she described the day at the hospital, Mrs. Woodard took down the picture, now framed, from the wall of the room and also brought out a colored snapshot of the group taken with the doctor following their arrival at the settlement.

"We were sitting on the ground and I happened to be next to Dr. Schweitzer at the time," Mrs. Woodard recalled. "When someone started to take the picture, he reached over and removed my dark glasses. He wore none, but did have a sun helmet and was concerned that we all keep covered from the intense sun."

The hours at Lambarene seemed to fly by and it was time to say goodby. As Mrs. Woodard related:

"When it was time to leave Dr. Schweitzer took us to the river and sent us back in his own boat—made by himself and a great improvement over the native type. He helped us aboard with a steady hand and waved goodby as we started down the river while it was still light. It was a never to be forgotten day for us!"

She spoke thoughtfully and it seemed as though the simplicity and goodness of Albert Schweitzer shone through her words—and her memories of that day.

The Iowa Farm Bureau Federation's Position With Respect to Certain Aspects of Our Farm Program

EXTENSION OF REMARKS
OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. SCHWENGEL. Mr. Speaker, earlier this month, Howard Hill, president of the Iowa Farm Bureau Federation, drafted a letter to Secretary of Agriculture Benson in which he outlined some of the misconceptions which are prevalent about the subsidization of agriculture and the benefactors of these subsidies. Mr. Hill also suggested areas where improvement could be made in the Government's program for agriculture.

This letter has been printed in the Farm Bureau Spokesman in Iowa, but I feel that its contents deserve wider circulation. For that reason, I ask consent, under leave to extend my remarks, to have the letter printed in its entirety in the Appendix of the RECORD.

JULY 8, 1959.

The Honorable EZRA T. BENSON,
Secretary of Agriculture,
Washington, D.C.

DEAR MR. SECRETARY: The purpose of this letter is to express momentous concern about the following:

The present imbalance between the supply of food and fiber and the effective demand.

The immediate future prospects for farm income, particularly for the livestock producer. Production estimates give indication of catastrophic prices for livestock within the next few months.

The current effort to cast farmers as pampered and greedy wards of the Government.

We believe the Department of Agriculture has rightly called attention to the economic inadequacies and political inanities of existing farm legislation as enacted by Congress. However, this effort toward self-analysis and forthrightness on the part of agriculture has produced some serious public misunderstandings. Many magazine and newspaper articles have been written recently holding up farmers and farm programs as the horrible and evil example. We believe the following points should be forcefully called to the attention of the public:

(1) The chief benefactors of past and present Government farm programs have not been farmers, but rather, the consumer. The hours of labor necessary to earn the weekly foodbasket have constantly and consistently decreased. The American worker eats better and spends a smaller percentage of his weekly paycheck for food than any other worker in the world.

(2) That farmers have made the greatest contribution to holding down the cost of living of any major economic group, thereby assisting in the control of inflation.

(3) That a sizable portion of the Department of Agriculture's budget is for loans on commodities, to rural electric cooperatives and others, rather than expenditures. These loans are no more a subsidy than are FHA housing loans and dozens of others of a similar nature.

(4) That the outright subsidies in the Department of Agriculture, while possibly too large, are indeed small when compared to the total subsidies now provided and proposed for other segments of the economy—such as urban renewal, aid to cities in sewage disposal, aid to depressed industrial areas, production payments for mine operators, aid to city commuters, fast tax writeoffs for the oil industry, subsidies to the merchant marine and airlines, subsidies to public housing, extended unemployment benefits, welfare programs, the most of which is expended in cities, and others.

(5) Agriculture's bargaining position must be strengthened if it is to compete successfully with industries' protective tariff and labor's monopoly exemptions.

We believe the agriculture situation to be grave. Farmers have readily and effectively adapted their business to new methods and technology. They are now confronted with a prodigious transition and reorganization task. We resent being made the subject of public denunciation and a political stamping ground while receiving less actual assistance in meeting our problems than that afforded other economic groups.

We direct our criticism toward no one in particular, but respectfully suggest an immediate and extensive study by organizations, the Department of Agriculture and other appropriate agencies into ways and means of helping agriculture develop the countervailing position necessary for successful competition and for agricultural independence. We suggest investigation and study of the following:

(1) The reduction or elimination of all Government reclamation and other programs which actually increase agricultural production.

(2) A land retirement or set-aside on a scale sufficient to balance current production with demand accompaniesd by an end to price-fixing attempts. As a government policy this is fully as justified as the mihimum wage, the 40-hour week, oil production quotas and numerous other artificial regulations now in effect.

(3) The use of present surplus agricultural commodities in a practical program designed to bring permanent benefits to our allies and long-term improvement in our foreign relations. Such a program would have to be carefully planned and skillfully executed if it is to accomplish these objectives.

(4) A sizable transfer of Department funds to develop a significant research program to find new industrial uses for agricultural commodities. The money now being spent to convert saline water and other similar programs might better be expended for the above purpose.

(5) A thorough study of the impact of the United States and the British Commonwealth joining Western European countries in Common Market. American farmers are not afraid to compete with other nations if business and labor will do likewise.

(6) The elimination of labor exemptions from antitrust legislation.

Farmers, as a group, have an unshakable faith in the private enterprise capitalistic system. They believe that Government programs should be so designed as to assist economic groups to make adjustments so that these programs need not become permanent. Farmers are in favor of a minimum of Government regulations and subsidies. However, these same principles providing for a maximum of free competition must be applied not only to agriculture, but also to labor and industry. Farmers invite business and labor to join them in minimizing

artificial Government regulations, unwise subsidies and unjustified protection and barriers.

Sincerely,

BOARD OF DIRECTORS,
IOWA FARM BUREAU FEDERATION,
E. HOWARD HILL, *President.*

The Kremlin's Economic Offensive

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, July 28, 1959

Mr. WILEY. Mr. President, we realize that until now, the Geneva Conference has not been fruitful in producing any real agreement between the East and West, which would lessen tensions and promote peace.

Currently, the delegates are reviewing their stands and shaping up proposals for a "last round" at the conference.

As yet, there have appeared no promising signs either at Geneva or Moscow that the Kremlin is willing to accommodate itself to proposals that will serve other than its own communistic purposes.

We should, however, continue relentlessly, as we have in the past, to probe, and explore, for grounds for agreement that would ease tensions and lessen the threat of war between the Communist and free world powers.

With a dim outlook for far-reaching agreements at Geneva, however, it is necessary now that we look beyond the conference. Recognizing the dangers resulting from unresolved East-West differences, we must look to our policies, programs and strategies for the years ahead.

We can be assured of one thing: The Communists are not sleeping.

To the contrary, they are increasing their many-pronged penetrations throughout the world—economically, ideologically, and in many other ways—that will serve the Communist cause.

My colleagues will recall that earlier in this session, I introduced a bill, S. 2080, aimed at enabling us more effectively to deal with the Communist economic offensive.

Among other things, the measure would establish a council to better coordinate our economic policies at home and abroad, not only to counter the Communist offensive, but to lay a solid foundation for our own domestic progress, as well as better integrate our economic policies with those of friendly nations around the world.

In view of the fact that we are currently seeing continuously new efforts at economic penetration by the Soviets, I believe that our Nation definitely needs a better-coordinated, more-effectively designed economic policy to serve our needs, both for progress and security.

Recently, I was pleased to have forwarded to me by Mr. Edgar R. Baker, managing director, an article from the international edition of Life magazine, entitled "The Kremlin's Economic Offensive," by Edward Crankshaw.

The article, I believe, again reemphasizes the multifaceted ways in which the Kremlin's economic plans—in many cases specifically tailored for each nation—are penetrating areas around the world.

After reviewing the broad-scale efforts of economic penetration by the Communists in India, Egypt, the Middle East and elsewhere in the world, Mr. Crankshaw, and those associated with him in developing the article, significantly recommend a more effective U.S. economic offensive.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

The being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the international edition of Life magazine, July 6, 1959]

THE KREMLIN'S ECONOMIC OFFENSIVE—BATTLEGROUND: INDIA'S PLAINS, SHORES OF NILE—THE KREMLIN'S ECONOMIC OFFENSIVE NOW SPREADS THROUGHOUT THE WORLD

(By Edward Crankshaw)

On a wide, empty, sun-baked wilderness 156 miles from the nearest city in India the night skies are lit by the blast furnaces of a huge, busy steel mill. This is the Bhilai mill, a joint effort of India and Russia. The Soviets have lent the money and provided the know-how for the mill, and the Indians have supplied the manpower. But to hear the Russians—and many Indians—talk about it, you would think the entire project was a spectacular display of Soviet magnanimity, instead of a straight business deal carefully obscured by the embroidery of cold war propaganda.

The West Germans, in fact, are building another steel mill in India, using 800 German engineers. The British are building a third, employing 400 Britons and 29,000 Indians; British banks lent $32.2 million and the British Government lent $42 million to make the project possible. Americans are doubling the million-tons-a-year capacity of India's Tata mill. But the Russians have talked the most and they treat the Indians as they like to be treated. Everyone in India has heard of the Bhilai steel mill because Nikita Khrushchev and the Soviet economic general staff have made sure that they heard. Bhilai represents the Russians' deepest salient in an offensive that has developed with remarkable speed on a number of fronts. In the long run, the offensive could fail. But there is no doubt at all that the immediately desired effect is being obtained: for the smallest possible outlay of resources, the heaviest possible impact is being made on parts of the globe where the Russians are newcomers.

THE STAGING AREA

You can see the troops in this offensive almost any day at Vnukovo airport on the outskirts of Moscow. There, the TU–104 jets stand in rows. In the airport building one witnesses scenes that bring back memories of the days when almost every second European seemed to be headed for America, by ship. There are the same family groups with bundles and shabby suitcases, the same wailing farewells. But these voyagers are not striking out into the unknown to seek their fortunes and never return. They are simply traveling salesmen for the Soviet Union, perhaps alone, perhaps with family, waiting to be called for the next flight to Cairo or Delhi.

In hours they will have crossed the deserts of Arabia or the high Himalayas and will be settling down to fight the Kremlin's economic war on the West. In a year or two, most of them will be back at Vnukovo, having helped to build one more steel mill, one more bridge or power station or railroad or factory in a world desperately hungry for such things.

In the same aircraft as the Soviet engineers and technicians—the traveling salesmen of Khrushchev's Russia—there will be a sprinkling of diplomats and officials with briefcases, on the way to arrange for still other building projects. There may also be a few Indians, Syrians or Egyptians, returning home to build for themselves after a short and intensive course of training.

"We declare war on you * * * in the peaceful field of trade," Khrushchev told an American editor in 1957. "The threat to the United States is not the ICBM but in the field of peaceful production * * * it will prove the superiority of our system."

The troops the Soviet is using in this war are trained to the minute. Most of them know little or nothing of political warfare, and they care less. But they know they belong to an army, and they know what they have to do. They are not concerned, as so many in the West imagine, with espionage or missionary work for Marx. The Kremlin does not waste good engineers on cloak-and-dagger exercises or agitation. Their job is for the greater glory of the Soviet Union and the benefit—they believe—of backward peoples, to build their dams, their factories, their hospitals faster and better than the Germans, the British, the Americans build theirs. They know that if they do their jobs properly they will get all necessary backing from Moscow, and never mind what it costs. One thing they must avoid: they must never, never suggest that the enterprise on which they are engaged is anything but a business partnership between equals. They must live simply and modestly in cantonments, and keep to themselves without seeming to belong to a lordly and exclusive white caste. They must show that they can drive bulldozers, too, and they must make the people they work with feel more at home with them than the same people would with Britons, Americans, or Germans.

These precepts guide the nearly 1,000 Soviet engineers and technicians working day and night with 64,000 Indians at Bhilai. The Russians are putting up the plant and will get it working, using Soviet materials and tools. The Indians are responsible for preparing the site and building the townships called into being by the enterprise. The trucks and bulldozers the Indians are using came from the United States, but the bulldozers will go away, and the mill itself will remain. The mill is no gift; India's wage bill alone for the Soviet engineers will come to $10 million. The Indians are paying for Soviet know-how and Soviet materials in hard cash, so they feel no sense of obligation and they surrender to Moscow nothing of their dignity and nothing of their freedom. But there is a story behind the hard cash the Indians are paying.

The mill is being paid for out of a Soviet loan of $133 million, repayable in 12 years from the date of the project's completion, at 2½ percent interest. The loan was made by the Soviet economic general staff, which has wonderful freedom of action in the war that Khrushchev declared. It can lend what it likes, where it likes, as quickly and as cheaply as it likes, for as long as it likes. In underdeveloped areas the Russians build what the local governments think they want most, even if the Russians doubt the local governments' wisdom. They move fast: there is no long-drawn-out discussion, and everything they do is designed to obtain the largest possible measure of credit for the Soviet Union. Besides its deals in India, Russia (with help from China) has extended 2½ percent, 12-year loans in the last 3 years to Egypt (at least $500 million); Syria ($167

million); Iraq ($138 million3; Ceylon ($60 million); Indonesia ($100 million over 15 years). It is not easy for an individual, capitalist firm, no matter how large, to compete with the financial dirigisme of the Kremlin. Even the World Bank asks more than 2½ percent interest, and insists that the money be spent only on projects it considers useful. And if they think it necessary, the Russians are ready to cut prices even lower to get the business.

Actually the impact of the Soviet economic offensive is out of all proportion to its weight. But the Russians have a way with figures, especially when they are reporting on trade, another phase of the offensive. In the last few years Soviet trade with India, for example, has increased fortyfold. That is the sort of figure, like the percentage figures in the Soviet's domestic 5-year plans, that the Russians delight in flinging about. A thousand washing machines turned out this year represent an impressive increase in percentages, if no washing machines were made last year. The fortyfold increase in trade with India is this sort of figure. Total Russo-Indian trade in 1956 was 401.6 million rupees, but it was only 10.9 million in 1952. Even the 401.6 million figure represents only 2½ percent of all India's foreign trade. Last year, for comparison, British trade with India was more than three billion rupees. U.S. trade with India was over 2 billion rupees. Japan's was about 600 million rupees.

It is the same in other vulnerable parts of the world; the real figures are low, but the Russians make sure that their decibel value, and some other values too, are high.

The plan does not work perfectly. Egypt was badly let down by some inferior locomotives from Hungary. Indonesia had its eyes opened by a consignment of 4,500 faulty imitation jeeps from the Soviet Union. Sometimes Moscow's eagerness to pull a fast one in one part of the world blights carefully cultivated good will in another part. The Russians upset Indonesia when they started buying rubber heavily from Malaya too. The dumping of tin in Europe dealt a nasty blow to the Bolivians, whom Moscow was ardently wooing. Sometimes, too, active politics cuts across the trade routes. Thus, when all the world thought Moscow had a stranglehold on Egypt, Moscow's political game in Iraq and Syria—and in Egypt too—drove Colonel Nasser to assert his independence.

But on the whole the Soviet methods answer well enough to current Soviet needs. What impresses most is not the weight of the offensive but the speed with which the attack has developed on widely separated fronts. On some of these fronts, as in Latin America, and in Africa apart from Egypt, the weight is negligible, and looks as though it would be negligible for some time to come. But meanwhile the Kremlin gets its considerable propaganda value from the repeated vague promises and suggestions, the apparent eagerness to talk business, the complete absence of visible strings, and the dispatch with which Moscow fulfills small requests that cost nothing—like sending off an irrigation expert to the end of the world in the time it takes to fly him there; the British or the Americans would need months to find such a man, detach him from his job, and persuade him to go.

Some Western nations, not in need of technical aid, have learned a good deal about Soviet trade. British business with the Soviet Union last year stood between $70 and $84 million worth of exports and $160 million worth of imports—a fleabite in Britain's total oversea commerce. For years the Russians have been agitating about increasing this trade spectacularly and many British firms have been eager to do so. But when it comes to firm agreements, little happens and that happens slowly. First, the Russians blame the embargo on strategic goods. When the embargo is lifted on many commodities, the Russians say it is too late: the embargo has forced them to develop their own resources. Trade missions are exchanged and huge target figures suggested. Then the Russians say that they cannot buy much from Britain unless Britain will give long-term credits; they imply that they would be doing Britain a favor to accept her credits and thus help her out of her recession. The recent, highly advertised trade agreement between Britain and Russia was signed only after arrangements had been made for Soviet purchases to be financed through the British Board of Trade's credit guarantee department.

Whether or not the Russians believe everything they say during such negotiations, it is all useful propaganda. Britain lives by trade, and it is always worthwhile to suggest to the British that political considerations are keeping them from turning an honest penny. Thus America's McMahon Act, which gave the U.S. Atomic Energy Commission a virtual monopoly over atom power, was a godsend to the Kremlin, which was able to shout repetitiously that American Government policies were disrupting the natural pattern of British trade, endangering the free British economy.

But when the Russians really want anything from Britain, such as copper, or equipment for the Dnepropetrovsk rubber tire factory, or machinery for such pet Khrushchev enterprises as the manufacture of prestressed, precast concrete units and the production of cellulose acetate yarn, they find a way to pay for it.

The point is that in those Western countries where the Soviet Union could do a roaring trade there is much talk and little action. The same is true, to even greater degree, of Latin America. Brazil, for example, has been doing a good deal of shopping behind the Iron Curtain, for steel, rails, chemicals, tractors, ships (14 freighters from Poland), to save dollars. Red China is in turn Brazil's biggest sugar customer. But the reality has been nothing like the talk. Promised oil from the Soviet Union took a year to be delivered, 9 months of which were taken up by negotiations. The Brazilian Communist press has been full of reports of offers up to a billion dollars for trade and technical aid. But no offer has matured. The satellites in particular have been actively trying to undercut American and British and German goods. There are 18 separate Communist bloc missions in Latin America but their activity has been much greater than their weight—except politically.

In the Middle East, however, we find an entirely different situation. It is here that the Soviet deploys the main weight of its effort at economic penetration. Here the traditional pattern of trade has been truly upset by Soviet action. This action began almost immediately after the summit conference in Geneva in 1955. It broke through on a broad front in 1956 with the Western change of mind about financing the Aswan High Dam, the nationalization of the Suez Canal, and the Anglo-French reprisal.

Russia's trade with Egypt has increased tenfold in the last 2 years. In 1958, the Soviet Union and the Eastern bloc between them took nearly 60 percent of all Egyptian exports. The exact total of Soviet and Soviet bloc credits to Egypt (on the 2½ percent over 12 years basis) is not known, but is believed to be at least $500 million.

Credits became lures; but the Russians have also used pressure. The Soviet's object has been to entangle the Egyptian economy inseparably with her own. Thus when Russia and her satellites bought the bulk of the Egyptian cotton crop in 1957 at a high price, much of it was resold in the West at below cost. This deprived Egypt of foreign exchange and compelled her to turn to Russia for mining equipment, oil, textiles, chemicals, ships.

The most publicized item of Soviet aid to Egypt, of course, is the Soviet contribution to the ineffable symbol of Egyptian renaissance, the Aswan high dam. But Moscow has been more profitably occupied in other ways. It is in Egypt, as well as in Syria (and now in Iraq), that Moscow has worked hardest for immediate political ends, infiltrating men and ideas, exercising direct political pressures, arranging things so that installations built with Soviet help could be run only by Soviet-trained technicians. There are no fewer than nine Russian-established training centers in Egypt. When Germany had virtually completed negotiations to build an Alexandria shipyard, Egypt gave the job to the Russians—influenced, it is believed, by Soviet advice that only Russians could build and staff a shipyard designed to repair Soviet ships already supplied to Colonel Nasser.

Syria was delivered into Russian hands by the 1958 crop failures. She had no foreign currency, could earn none. The World Bank offered a 5 percent loan on condition that it had supervisory control over the spending. Moscow offered $157 million on her usual terms—and no control. The Syrians had only to say what they wanted, and Moscow would supply it. Some of the things they asked for: a 450-mile railway from Latakia on the Mediterranean via Aleppo to Kamishly on the Turkish border; their first oil refinery (which the Czechs are building); bridges across the Euphrates and the Khabur; a 2½-billion-cubic-meter dam on the Euphrates; and dams and power stations on the Orontes River. In the campaign to develop the country, four Soviet Ilyushins made a complete aerial survey for a geological map. The negatives are now safe in Moscow.

The Iraqis' $138 million credit dates only from February of this year. But the circumstances in which it was negotiated were wonderfully flattering to Iraq. It will be remembered that one day in February Mr. Khrushchev announced that he would be unable to fly to Kiev with the British Prime Minister, Mr. Macmillan, because he had to see his dentist. He may or may not have seen his dentist, but on that very day he certainly saw the leader of the Iraqi trade delegation, Dr. Ibrahim Kubba. The agreement followed at once. It provided, among other things, for an aerial survey of Iraq to be carried out by the Russians. The open-skies idea has finally caught on with the Kremlin.

Having said that much, we have said the worst. The Russians have only a foothold in world trade. They and the satellites and China are feverishly active all over the place, in Asia, in Africa, in Latin America. But they are being selective about the follow-through. In Africa, apart from Egypt, Sudan, and South Africa, the actual trade is small. All through 1958 Khartoum was promised a trade mission from Moscow; it did not turn up until this year. The Russians were off the mark more quickly in Guinea, when Guinea broke away from France: 30 percent of Guinea's total trade is now with the Soviet bloc. Russia is paying more than the market price for Guinea's produce—she is in effect replacing the former French subsidies—and since Russia can stop at any time, Guinea is at her mercy. The Chinese and the Russians do a modest trade with French West Africa, Morocco, Tunisia, and Rhodesia—just enough to keep their names in the news. But, apart from the Middle East, their only other major effort has been in southeastern Asia, particularly Indonesia, where Soviet shipping swiftly responded to the needs of interisland traffic when the Dutch packed up.

These examples illustrate the general pattern of Soviet economic penetration. Five years ago there was nothing: now there is a great deal of miscellaneous trade and aid, spread rather thinly over the greater part of the world, with certain significant concentrations. There is also a wonderful amount of propaganda.

How will it work out? I think the demands of an increasingly critical and educated population at home make it impossible for the Soviet Union to launch an immediate all-out economic offensive. This is why there are still far more promises than deeds in the field of trade and aid. The Soviet trade offensive, though impressive in range and colorful in detail, is tiny compared with the normal trading activities of the decadent West. But the offensive exists. It is conducted with flexibility, imagination, and, where this seems desirable, with extreme care for the susceptibilities of underdeveloped nations. We have to pay the most serious attention to it. As Soviet production increases, the capacity to export material and engineers will increase. The Western democracies are inhibited by their free markets from meeting Russia's state-centralism on its own ground. But there is plenty of room for imaginative cooperation between the democracies to shape a new pattern for trade and development in the neglected countries and with each other. Some Western nations, especially Germany, are already developing techniques to enable them to outbid Moscow planners, meet the demands of Asia and Africa, and still insure individual firms against loss. This is an excellent idea. But it would be a pity if the Western democracies, in their individual efforts to keep their traditional markets, started cutting each other's throats as well. This is what Mr. Khrushchev confidently expects us to do, and he can be expected to spread his net wide to entangle Western competitors in it, stimulating rivalries between us from which only he can profit.

If we avoid this trap, and if, as individual nations and as a group, we show imagination and flexibility, sympathy and dispatch in meeting the sometimes tiresome demands of poverty-stricken countries which want the moon, we have nothing to fear. We have nothing to fear because, as a group, we are stronger and more fruitful and more experienced than the Soviet bloc can become in any foreseeable future. And we are also more honest. Finland knows that trade is a political weapon in the hands of Moscow. So does Iran. So does Yugoslavia, on a rather different level. In all those countries Moscow has, at one time or another, built up trade only to cut it off with the deliberate intent to wound, or to produce political changes in her favor. Egypt is now finding this out for herself. Other countries will find it out. We should be there ready and waiting to help.

On the other hand, if the Soviet Union should change her attitude, and embark on developing international commerce without fell intent, again we should have nothing to fear. The world is large and largely underdeveloped. If Russia can help to develop it, well and good for us all.

Until further notice, however, we must take Mr. Khrushchev at his word and think in terms of economic warfare. The Soviet Union has made a good start, but only a good start. All we have to do is to recognize that the tactics and strategy of this economic war are not the same as the tactics and strategy of past economic wars. This war is total. There can be no limited victories. We must learn the new strategy and tactics fast. What we need first is an international economic general staff to match the economic general staff in Moscow. And for that we need men who know what the battle is about.

Dave Cummings, of Wilkes-Barre, Sets Record for Tenure in Office With United Mine Workers

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following feature article from the Wilkes-Barre Sunday Independent of July 26, 1959:

CUMMINGS SETS UNION RECORD FOR SERVICE TO MINE WORKERS

Dave Cummings, reelected president of Lance Colliery Local 1174, United Mine Workers of America, is setting a record for tenure in office unsurpassed by any other member of the United Mine Workers. He has served Lance local for 48 years and at the termination of his present term will mark a half century in office.

For most of his years with the mine workers, Cummings has been president of the Lance union. His popularity has been proved by the fact that he has been without opposition for president the past quarter century.

TURNS BACK SALARY

Although elected secretary-treasurer of district 1, following appointment to that position in 1951 by John L. Lewis, international president, Cummings continues to retain leadership in the local. His salary as president is turned back to the union treasury.

The outstanding mine union leader was first elected trustee of Lance local in 1911 and then served as financial secretary and recording secretary until 1922, the year he took office of president. He has been president of Lance for 37 consecutive years and was reelected without opposition last June 26.

According to officials, no other officer in the entire membership of the UMWA can match the record of service.

ON WAGE COMMITTEE

Cummings has also represented Lance local at numerous district, tridistrict, and international conventions, and also served on the policy committee during wage negotiations with anthracite operators.

He has served as the mine workers' representative on many public projects, was chairman of the Mines Division of Wyoming Valley Community Chest, and a committee to promote sale of anthracite. He took the initiative to form several policy committees to promote anthracite and discourage substitute fuels in the coal regions.

HOISTING RECORD

In his earlier days, Mr. Cummings worked at various jobs in Lance colliery, first with Lehigh & Wilkes-Barre and later Glen Alden when the companies merged. He served as shaft engineer for many years and holds the record for hoisting 1,050 cars of coal in an 8-hour shift at Baltimore Shaft.

"The lifetime of service to local 1174 is only part of the story," according to Hugh Haughney, recording secretary of Lance local. "It is apparent that Dave also has worked steadily with Lance colliery for over 50 years because a boy just does not start to work and hold union office. He is a fine person, held in high esteem by all of us at Lance, and is a credit to the UMWA. He is an excellent example of leadership, taking time to mingle with the men who grew up with him, despite his many duties."

Economic Growth and the Government's Role in Fostering Growth

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. CURTIS of Missouri. Mr. Speaker, on July 24, 1959, the Secretary of the Treasury, Robert B. Anderson, appeared before the Joint Economic Committee. I believe his statement merits the attention of each and every one of my colleagues and it is for that reason I have asked permission to have it inserted in the RECORD. The study which has been conducted by the joint Treasury-Federal Reserve study group is an important one and I call attention to part I of the group's factual report as well as parts II and III.

The statement follows:

STATEMENT BY SECRETARY OF THE TREASURY ROBERT B. ANDERSON BEFORE THE JOINT ECONOMIC COMMITTEE, FRIDAY, JULY 24, 1959

Our national economic objectives can be summarized under three broad headings: (1) Continuity of employment opportunities for those able, willing, and seeking to work; (2) a high and sustainable rate of economic growth; and (3) reasonable stability of price levels. Each of these objectives is important; each is related to the others.

The rapid upsurge in economic activity of the past 15 months provides an appropriate background for your study of these national economic goals and the best methods of achieving them. The recent resurgence in output, income, and employment to record levels has once again demonstrated the basic strength and resilience of our free choice, competitive economy. Thus, we visualize the task with which your committee is confronted not as one of devising drastic changes in our techniques for achieving our economic goals. Rather, it is to evaluate, within the perspective of developments of the past few years and during the postwar period as a whole, the existing techniques toward the end of sharpening their use. There may perhaps be weapons not now in our arsenal that should be developed; there are no doubt ways in which existing techniques can be improved. But the performance of our economy supports the judgment that basically our economy is sound and healthy.

Much could be said about Government economic techniques, their nature, interrelationships, strengths, and shortcomings. I am sure, however, that your committee will explore these matters thoroughly, drawing both from current thinking and from the vast body of earlier study performed both by committees of the Congress and by private individuals and organizations.

Before discussing the Treasury-Federal Reserve study of the Government securities market, in which you have expressed particular interest, I should like to consider briefly economic growth as a goal of public policy.

Some in our country express a belief that the Government should undertake the primary role in promoting economic growth. It is my belief that in our system the Government is not the predominant factor in our Nation's economic advancement. It must foster and facilitate economic progress—it cannot force it.

What we all seek is sound, sustainable growth—not any kind of growth, or growth at any cost.

Should our efforts to spur progress lead to inflation, it will bring only disappointment and hardship. But, when growth is in terms of goods and services that people need and can buy, it will bring great rewards.

Only within the past decade has economic growth been explicitly recognized as a major goal of public policy. This recognition, coupled with considerable public discussion of the importance of growth to our economy, provides an important reason for taking a careful look at growth as a national economic objective. What is economic growth? What determines the rate of economic growth in a free choice, market economy? And, finally, what is the proper role of Government in promoting a high and sustainable rate of economic growth?

WHAT IS ECONOMIC GROWTH?

The most commonly cited definition of economic growth is in terms of the annual advance in real gross national product; that is, growth in the dollar value of total output, adjusted for changes in price levels. For some purposes this is a good measure of economic growth; for others it is not.

An over-all measure of growth tells us nothing about its nature. For any period, we must get behind the broad figures to determine what type of growth has taken place. This is simply another way of saying that promotion of growth for its own sake may well result in either fictitious or unsustainable growth. An increase in output, to be meaningful, must consist of the goods and services that people want and are able to buy. It is not enough to select some hypothetical maximum of growth; the actual growth that occurs must consist of useful and desirable things as opposed to unwanted or undesirable goods.

Thus, in trying to decide whether growth over a period of years was at an adequate rate, we would first have to look within the total—to get behind the figures—and try to determine the characteristics of the growth. Some of the questions we would ask would be: How much did personal consumption expand relative to Government use of goods and services? Within the Government component, what portion consisted of defense spending as opposed to schools, highways, and other public facilities? How much of the increase in output consisted of goods the people did not want, and thus ended up in Government warehouses, being given away, or destroyed? What portion of total output was devoted to investment in the instruments of production, to modernization of plant and equipment, and to research? How much of our effort had to be devoted merely to maintenance of our productive plant, as opposed to net new additions?

There are other important questions. How were the fruits of the growth in output distributed among various groups in the economy? Did the growth carry with it certain imbalances that would hamper future growth? To what extent was temporary growth fostered by reliance on actions that impinged directly on the free choice of individuals and institutions?

These are but a few of the questions we should ask. They indicate that economic growth, in terms of a broad, aggregate figure, is not necessarily an end in itself. It must be growth of the right kind; it must be sustainable growth.

WHAT DETERMINES THE RATE OF ECONOMIC GROWTH?

The role of public policy in fostering a high and sustainable rate of economic growth in a free choice, competitive economy can be properly assessed only on the basis of an understanding of the determinants of growth.

The factors influencing the rate of growth are manifold and complex. Among those of major importance is the pace of technological advance. No one can study the economic history of this or any other advanced industrial nation without being impressed by the vital contributions of the inventor, the innovator, and the engineer. A stagnant technology is likely to be accompanied by a stagnant economy. Man's ingenuity in tackling and solving his problems lies at the heart of the growth process.

This is perhaps another way of saying that growth and change are inseparably intertwined. If we would enjoy maximum growth, we must not only be willing to improve the production process through accepting new ways of doing things, but we must also actively seek out such techniques. Moreover, the integral role played by change and technological advance in the growth process contributes to unevenness in growth over time. Technological advance does not come at a steady, constant rate. Thus we cannot expect growth, to the extent it reflects such forces, to proceed at a steady rate, year in and year out.

Technological advance, however, cannot alone assure a high rate of growth. The best ideas and the best techniques are of little benefit if the means are not available to translate them into operating productive processes. This requires real capital, which can only grow out of saving and productive investment. Thus, real capital formation—which consists of the machinery and instruments of production, tools of all sorts, and new plant buildings—is a basic ingredient of economic growth. An economy in which additions to the stock capital equipment are small cannot be a rapidly growing economy.

The importance of an adequate rate of capital formation in the growth process deserves special emphasis. Broadly speaking, current output can be directed either into consumption goods, represented by durable and nondurable consumer goods and services, or into investment goods, represented principally by new industrial plant and equipment. So long as our economic resources are being utilized close to capacity—as has indeed been the case almost continuously since 1941—the more of our output we devote to capital formation, the less that is available for current consumption. The more we consume, the less we can devote to capital formation.

This is a basic but, apparently, little understood principle of economics. There appear to be some observers who believe that, on top of providing adequately for national defense and devoting a considerably larger volume of current output to public projects, we can still achieve uninterrupted future growth in the private sector of the economy at a rate higher than ever before realized in this country. Perhaps this is possible; but it seems clear to me that it can occur only at the expense of current consumption. It can take place, in other words, only if we are willing to accept a lower current standard of living. With our pressing needs for adequate national defense, we cannot have an ultra-high maximum rate of economic growth in the future, requiring as it does heavy current investment in plant and equipment, without restricting current consumption. We cannot "have our cake and eat it too."

A third important requisite for a high and sustained rate of growth is reasonably full, efficient, and continuous use of our economic resources. Economic recession is the No. 1 enemy of sustained growth in this country. Idle manpower and idle equipment represent production that is irretrievably lost. Moreover, inefficiencies in use of resources can also carry a heavy toll in terms of lost output.

It is important to emphasize that success in achieving high and sustained employment, and in providing useful job opportunities for our growing population, is closely related to our success in promoting an adequate rate of capital formation. In our highly industrialized economy, workers must have the machines with which to work. These machines will come into existence only to the extent that productive investment takes place.

In short, economic growth in a free choice, competitive economy tends to vary more or less directly with the pace of technological advance, the rate of capital formation, and the extent to which economic resources are effectively employed. To be effective, any Government program designed to foster growth must operate largely through these basic determinants.

GOVERNMENT'S ROLE IN FOSTERING GROWTH

Government can play an important role in fostering a high and sustainable rate of economic growth. One basic principle should be clear, however. In an economy in which major reliance is placed on individual initiative and decisions, and in which the alternative uses of economic resources respond, through the market mechanism, primarily to consumer demand, Government can and should play only a facilitating, not a predominant, role in the growth process.

The moving forces which promote growth in a free choice, market economy are basically the same as those that account for economic progress on the part of the individual. Thus the individual's desire for a higher and more secure standard of living for himself and for his family is the basic stimulus. This is the prime mover. To this end he studies, plans, works, saves, and invests. He searches out new ways of doing things, developing new techniques and processes. Where such instincts as these are strong, the forces promoting growth in society as a whole are strong. Where they are weak, the impetus for growth is also weak.

The first role of Government in promoting growth is to safeguard and strengthen the traditions of freedom in our economy. Stated differently, the proper and effective role of Government is to provide an atmosphere conducive to growth, not directly to attempt to force growth through direct intervention in markets or through an improvident enlargement of the public sector of the economy. Indeed, governmental efforts to promote growth that rely on, or subsequently lead to, excessive intervention in and direction of market processes can only impede growth in the long run.

The case for this approach to promoting growth is strengthened by the fact that technological advance flourishes in an atmosphere of freedom. Basic to technological advance is pure research; and a fundamental belief in our society is that pure research makes its greatest contribution when minds are free to meet the challenges of the future.

Government can also promote rapid, healthy growth by fostering competition in the economy. Competition sharpens interest in reducing costs and in developing more efficient methods of production. It places a premium on skills in business management. It stimulates business investment, both as a means of economizing in the production process by use of more efficient machinery and by enlarging capacity in order to capture a larger share of the market. Healthy and widespread competition, in short, is the primary stimulant to efficiency in use of our economic resources, both human and material, through technological advance and by stamping out waste and inefficiency in productive processes.

Our tax system may hamper growth in a number of ways. One of the objectives of the study recently initiated by the House Ways and Means Committee, and in which the Treasury is cooperating, is to determine what changes can be made that will be conducive to healthy and sustainable economic growth. I am hopeful that this study will lead to significant results.

All of these methods of aiding growth are important. I am convinced, however, that

Government can make a most significant contribution to growth primarily by using its broad financial powers—fiscal, debt management, and monetary policies—to promote reasonable stability of price levels and relatively complete and continuous use of our economic resources.

As noted earlier, a high rate of saving is indispensable in achieving a high rate of economic growth. Under conditions of near-capacity production, resources can be devoted to capital formation only to the extent that they are freed from output of goods for current consumption. This, in turn, is possible only to the extent that saving occurs.

In the years since the war, incentives to save in traditional forms—in savings accounts, bonds, and through purchasing insurance—have been somewhat impaired by the conviction of some that inflation is inevitable. In my judgment, this is a mistaken conviction. But the fact remains that if we allow a lack of confidence to develop in the future value of the dollar, the desire to save will be weakened.

Full confidence in the future value of the dollar can be maintained and strengthened only by a concerted, broad-gage attack on all of the forces and practices that tend to promote inflation. Some of these forces and practices may be new and thus require further study before they can be identified and before appropriate policies to control them can be devised. But there should be little doubt in our minds as to the proper role of general stabilization policies. Under present-day conditions, with production, employment, and income advancing rapidly to record levels, such policies should be directed toward self-discipline and restraint. This requires Federal revenues in excess of expenditures, to provide a surplus for debt retirement; flexible management of the public debt; and monetary policies directed toward preventing excessive credit expansion from adding unduly to overall demand for goods and services.

Some observers have argued recently that we are not now confronted with monetary inflation, or with a situation in which "too much money is chasing too few goods." They point to the high degree of price stability during the past year as proof of this contention. This same argument could well have been made in mid-1955, when that recovery was also merging into the boom phase of the cycle. At that time, the Consumer Price Index had actually declined slightly during the preceding 18 months; the wholesale price index has been stable for about 30 months. We failed to recognize at that time, just as we may be in danger of failing to recognize now, that the high levels of demand generated in the recovery had sown the seeds of later increases in prices. Thus, wholesale prices rose moderately in the last half of 1955, at a steady and relatively rapid rate throughout 1956, and moderately during 1957. Consumer prices, exhibiting the customary lag, did not begin to advance until the spring of 1956, but thereafter rose steadily until early 1958.

The important point is that effective control of inflation requires actions to restrain inflationary pressures at the time that such pressures are developing. To wait until the pressures have permeated the economy, and have finally emerged in the form of price increases, is to delay action until the situation is much more difficult to cope with.

Effective stabilization actions to limit inflationary pressures during this period of rapid business expansion, in addition to promoting stability of price levels, will stimulate sustained growth in still another important way. Such policies, by helping to assure that the current healthy advance in business activity does not rise to an unsustainable rate and then fall back, would promote relatively full and continuous use of our economic resources. I am firmly convinced that the degree of severity of a business recession reflects to a considerable extent the development of unsustainable expansion in the preceding boom. By exercising restraint and moderation during periods of prosperous business, we can keep booms from getting out of hand and, in so doing, minimize the impact of later adjustments.

Appropriate current governmental policy to promote growth must be consistent with long-range objectives and not resort to quick expedients that endanger sustainable development. We must reject the arguments of those who would attempt to force growth through the artificial stimulants of heavy Government spending and excessive expansion of money and credit. If we would foster growth—not of the temporary, unsustainable type, but long-lasting and rewarding—we need first to reinforce our efforts to maintain reasonable price stability and relatively full and continuous use of our economic resources. Both logic and experience demonstrate clearly that heavy reliance on Government spending and monetary and credit excesses during a period of strong demand, rather than promoting growth, can lead only to inflation. Inflation tends to dry up the flow of savings and leads ultimately to recession—the No. 1 enemy of growth.

We live in what is basically a free choice economy. Within rather broad limits, we are free to dispose of our labor, property, and incomes as we see fit. In disposing of our incomes, we are free to spend or to save, to invest or to hoard. So long as we maintain the basic freedoms that foster competitive enterprise and stimulate technological advance, and so long as we use our broad financial powers to promote stability in the value of our currency and to avoid the extremes of economic recession, I am confident that economic growth will proceed at a high and sustainable rate. The strength of our economy lies in its very reliance on the integrity, wisdom, and initiative of the individual. We must not weaken this basic strength.

THE GOVERNMENT SECURITIES MARKET STUDY

I will now make some brief observations on the Treasury-Federal Reserve study of the Government securities market.

Our national economic objectives are, of course, fundamental. It is only in relation to the successful achievement of these objectives that the financial policies pursued by our Government can have real meaning. Furthermore, fiscal, debt management, and monetary policies can make their maximum contribution to national economic goals only if they can operate in a market which is responsive to policy actions both in terms of basic understanding of those actions by the investing public and in terms of the efficiency and maximum usefulness of market organization.

The Government securities market is the largest financial market in the world, with a daily trading volume of more than $1 billion. It is an extremely complex market and is sharply competitive. It is very responsive to trends and expectations as to business activity, Government policies, and international developments.

Its responsiveness and competitiveness, under widely varying circumstances, mean that it can provide the proper environment for the successful flotation of the tremendous volume of frequent Treasury security offerings to the public, which last year alone totaled almost $50 billion, exclusive of the rollover of weekly Treasury bill maturities. Simiarly, it can provide an efficient mechanism through which Federal monetary policy can operate. Moreover, it must provide for the smooth transfer of large amounts of Government securities among investors as liquidity and investment needs are satisfied.

The Treasury, the Federal Reserve, and the entire business and financial community, therefore, have a joint responsibility, collectively and individually, to encourage the market to resist any forces which threaten to impair its maximum performance. If market techniques become distorted or restrictive practices arise, the consequences can extend far beyond any immediate impact on investors, speculators, or suppliers of credit. It can undermine the basic contribution which a smoothly functioning Government securities market should make to the national welfare.

It is with this realization of the importance of the Government securities market that the Treasury and Federal Reserve last spring undertook their joint study of the way in which the market operates, with particular reference to the market's performance around the time of the reversal of the economic downturn a little more than a year ago.

A study of market mechanisms is necessarily technical. The results of any such study are understandably less dramatic than studies of the broad aspects of fiscal, monetary, and debt management policy which, together with general economic trends and expectations, provide the environment in which these market mechanisms operate.

Our joint Treasury-Federal Reserve study group has been working continuously toward the objectives which were laid out when the project was announced on March 9, 1959. Part I of the study group's factual report is now in final form; parts II and III are only in preliminary form. All three parts are being made available for public release on Monday morning.

Your committee already has a joint statement by Chairman MARTIN and myself relating to the study. The virtual completion of the factual study by the study group provides a background which Federal Reserve and Treasury policy officials can now carefully review as we work toward official conclusions and recommendations growing out of the study.

These conclusions cannot be prejudged. Treasury and Federal Reserve officials have been following the progress of the study group with great interest, but because of the late completion of the report, we have had little opportunity to examine the factual material which the study group has assembled.

As Chairman MARTIN and I state in the concluding paragraphs of our joint statement, markets are dynamic institutions which require adaptation to changing needs. The public interest is served only if the study of these adaptations is continuous, even though it may be intensified from time to time as in the present study.

We both recognize, and I want to emphasize it again, that improvements in market mechanisms, helpful though they may be, cannot be expected to solve the basic financial problems which our Nation faces—the problems of fiscal imbalance during prosperous times, the tendency for the public debt to grow shorter in its maturity structure, the need for continuous flexibility in adapting monetary policies to varying circumstances, the need to encourage increased savings to finance soundly the Nation's heavy capital requirements, and the problem of the instability of financial markets as they react to turning points in economic cycles.

These are basic problems. We are glad to work with your committee in seeking their solutions in the best interest of the public.

Health Insurance Program for Federal Employees

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my statement in support of a health insurance program for Federal employees, given before the House Post Office and Civil Service Committee on July 21, 1959:

STATEMENT OF CONGRESSMAN THOMAS J. LANE BEFORE THE HOUSE POST OFFICE AND CIVIL SERVICE COMMITTEE, IN SUPPORT OF A HEALTH INSURANCE PROGRAM FOR FEDERAL EMPLOYEES, JULY 21, 1959

Mr. Chairman, the Federal Government has been backward in providing the wages, and fringe benefits that are accepted as routine obligations throughout American industry. In fact, some corporations have voluntarily provided life insurance and health insurance programs for their employees because they understand the economics right of workers to these benefits, and because they know that such consideration for the welfare of their employees promotes the mutual confidence that inspires better morale and better efficiency.

A hospitalization plan for Federal employees has been studied—and restudied—for many years. Meanwhile, private industry has been moving forward with the times. Its prosperity has been paralleled by simultaneous economic and social progress on the part of its employees. But the turnover among Government employees continues at a disturbing rate that is both wasteful and inefficient. Why?

As Government employees compare their lot with those who work for private industry, they see all too clearly that their relative position is steadily deteriorating. They are discontented because they do not believe that the Government is being fair with them. While the Government marks time on studies, private industry is gradually improving the status of its own employees. There are many companies with lesser programs, but I will simply outline four of the best ones.

B. F. Goodrich Co. provides 120 days of hospitalization in a semiprivate room, and with a $250 maximum for surgery; Minnesota Mining & Manufacturing Co., 140 days up to $15, full cost of hospital services, with a $300 maximum for surgery, Armstrong Cork Co., 180 days up to $10, with further provisions for additional care, and a $200 maximum for surgery, American Sugar Refining Co., 365 days of hospitalization at full cost, with a $300 maximum for surgery.

In each case, the company pays the full cost, not only for the employee, but for his dependents, and for retired employees and their dependents as well. The steel industry and the automobile industry have 50–50 contributory programs for their employees, and this is the formula contained in Senate bill 2162, which is called the health benefits program for Government employees.

The Federal Government is the Nation's largest employer. Under the terms of this bill, more than 2 million Federal employees, plus their dependents, would become eligible for the protection enjoyed by most of those who are employed in private industry. The Government will withhold from employees' salaries, and annuity checks, sums to be matched equally by the Government. The individual Government employee or annuitant, would pay $1.75 biweekly. The Government employee with a family would pay $4.25 biweekly.

Progress on this type of legislation has been delayed for many years due to sharp disagreements, but in S. 2162 we have a bill that has united the American Medical Association, the American Hospital Association, Blue Cross-Blue Shield, Federal Employee Unions, and group practice plans in support of it.

It is unfortunate that the bill as passed by the Senate does not cover presently retired Federal employees and it is my hope that the House will make provision for them. We are morally bound to do so because we cannot cast adrift those who gave the best years of their lives in loyal service to the Government, and have now reached the age where they have greater need of hospital, medical, and surgical protection.

Passage of this bill at this session will mark another milestone in our efforts to make employment with the Federal Government attractive and rewarding. Health insurance for Federal employees will be one of the most constructive pieces of legislation to be enacted at this session.

Public Opinion Poll, 10th District of North Carolina

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. JONAS. Mr. Speaker, the following questionnaire was mailed to every post-office boxholder, rural and urban, in my district. It was also reproduced in the Charlotte Observer, the newspaper with the widest circulation in the district.

There are six counties in the 10th district, extending from the mountains of western North Carolina to the industrial Piedmont. Interests range from mining in the mountain counties to agriculture, manufacturing, and marketing in the industrial and commercial sections of the district which include Charlotte.

Although the responsibility for any votes I cast in Congress must necessarily be my own, I feel that the views of my constituents are important and that I should know them. By this method I sought to give the voters in my district an opportunity to express their opinions on a wide variety of subjects.

The response to the questionnaire was gratifying and replies were received from every county in the district and from urban and rural communities. They came from farmers, workers, housewives, executives, merchants, and professional men and women. The results were surprising in some instances indicating that the people of the district are thinking for themselves and are giving thoughtful consideration to current problems.

I should like to share the results of this questionnaire with my colleagues and under leave to extend my remarks in the Appendix include the questions and answers on a percentage basis:

Public opinion poll tabulation from Charles Raper Jonas, Representative in Congress, 10th District, North Carolina

	Yes	No	No opinion
1. Number the following issues in the order of their importance to you:			
(a) Balanced budget	17.2		
(b) Civil defense	3.8

(e) Federal aid to education	3.3		
(f) Inflation	13.5		
(g) Labor union legislation	9.5		
(h) National defense	24.2		
(i) Social security	4.4		
(j) Reduction in Government spending	13.4		
2. Under existing conditions at home and abroad, do you consider a balanced budget—			
(a) Essential	40.1		
(b) Desirable	52.2		
(c) Unimportant	5.8		
(d) No opinion	1.9		
3. Would you favor increasing any taxes (income taxes, gasoline taxes, excise taxes, or postage rates) if necessary to balance the budget?	50.4	46.0	3.6
If so, please specify which you would favor increasing:			
(a) Gasoline	13.2		
(b) Excise	16.6		
(c) Postage	17.4		
(d) Income	4.9		
(e) No answer	47.9		

	Yes	No	No opinion
4. Which of the following courses do you favor?			
(a) Continued Government spending at current levels even if this results in deficit financing	11.3	51.5	37.2
(b) Reduction in appropriations to match expected revenue	80.5	5.9	13.6
5. If you answered (b) "Yes," where would you cut?			
(a) Defense Department funds	7.9	15.7	76.4
(b) Domestic programs other than military	51.2	2.8	46.0
(c) Mutual security programs	22.2	8.2	69.6
(d) Across the board	35.2	9.1	55.7
6. If all other efforts to halt inflation fail, would you favor wage, price, and rent controls?	65.3	28.1	6.6
7. Do you think the Federal Government should spend more than it is spending for—			
(a) National defense	27.7	50.7	21.6
(b) Welfare	12.2	67.3	20.5
(c) Schools	35.2	49.7	15.1
(d) Housing	11.6	67.2	21.2
(e) Hospitals	24.2	56.8	19.0
(f) Agriculture	9.0	70.4	20.6
(g) Veterans	14.0	66.6	19.4
8. Do you agree with those who argue that labor unions are becoming too powerful and more stringent Government controls should be imposed?	87.6	9.9	2.5
9. Do you agree with those who argue that present labor laws (Taft-Hartley) are too oppressive against unions and should be repealed or liberalized as recommended by union leaders?	7.6	87.6	4.8

Public opinion poll tabulation from Charles Raper Jonas, Representative in Congress, 10th District, North Carolina—Continued

	Yes	No	No opinion
10. Should proposed union reform legislation cover the problems of secondary boycotts and "blackmail" picketing?	82.2	9.1	8.7
11. Do you favor repeal of sec. 14-B of the Taft-Hartley Act which permits States to enact right-to-work laws?	26.9	64.1	9.0
12. Do you favor increasing the Federal minimum wage law above $1 per hour?	37.4	57.9	4.7
13. Do you favor extending the coverage of the Federal minimum wage law?	55.4	33.8	10.8
14. Do you favor Federal aid to education for—			
(a) School construction	42.7	47.8	9.5
(b) Teachers' salaries	31.8	55.5	12.7
(c) Other general aid	20.9	58.9	20.2
15. Do you favor hospital and surgical care for social security beneficiaries to be financed by increased social security taxes?	33.1	61.7	5.2
16. Do you favor—			
(a) The present farm program under which the Government supports prices of certain farm commodities at a percentage of parity and imposes stringent acreage controls	17.8	65.8	16.4
(b) Basing price supports more closely to market prices	38.2	29.4	32.4
(c) Elimination of price supports and production controls	57.1	22.7	20.2
17. Do you favor increasing the interest rate on Government loans to REA cooperatives from 2 percent to the average rate the Government pays on its own bonds?	80.0	12.4	7.6
18. Do you think more federally administered programs should be turned back to the States and local governments?	81.4	12.9	7.5
19. Do you favor long-term, low-interest loans by the Federal Government to local communities to finance public works projects?	49.9	42.0	8.1
20. Do you favor Federal aid to depressed areas to finance plants and public works to attract industry?	42.5	49.3	8.2
21. Do you approve our firm stand with respect to the Berlin situation?	94.2	3.0	2.8
22. Considering world tensions, should we continue our mutual security aid to friendly nations?	77.4	12.0	10.6
23. Should the emphasis be on—			
(a) Military assistance	46.4	18.8	34.8
(b) Economic aid	54.4	13.7	31.9
24. Do you favor gifts and sales (for local currencies) of surplus farm commodities to underdeveloped countries?	80.5	10.4	9.1

How Powerful Uncle Tom O'Brien Landed Prison for Illinois

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1959

Mr. GARMATZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Chicago Sun-Times of July 26, 1959:

HOW POWERFUL UNCLE TOM O'BRIEN LANDED PRISON FOR ILLINOIS

(By Tom Littlewood)

WASHINGTON.—This is the tale of Uncle Tom's pen and how it came to be.

Starting soon, for completed construction in about 3 years, will be a new maximum-security Federal penitentiary in Williamson County, southern Illinois.

Set in one corner of the Crab Orchard National Wildlife Refuge about 5 miles south of Marion, the prison will bring a payroll of $1,500,000 annually to a once active coal mining region now hard hit by lack of jobs.

Altogether, the institution will cost about $10 million and eventually will house some 1,000 convicts.

Quite naturally, such a project was a succulent morsel floating in the congressional pork barrel.

How the penitentiary landed in Illinois rather than in Missouri or Kentucky or someplace else is a striking testimonial to the quiet, unobtrusive personal power wielded, when need be, by an 81-year-old Chicagoan in the Congress of the United States.

Furthermore, the squaring off for the site resulted in an almost unprecedented defeat for a crotchety old man from Elsberry, Mo., who, with a scratch of his red pencil, can advance or stop atomic aircraft carriers and gigantic missile projects.

KNOWN AS UNCLE TOM

The triumphant Chicagoan was Representative THOMAS J. O'BRIEN, known by the largely bloc-voting 14-man Illinois Democratic House delegation over which he presides as "Uncle TOM."

TOM O'BRIEN went to the Illinois General Assembly 53 years ago, in 1906; was elected to the U.S. House in 1932, where, except for 4 years as Cook County sheriff, he has stayed since.

He seldom makes speeches and is hardly a profound statesman. Yet a firm friendship with Speaker SAM RAYBURN, of Texas, cemented by political events of 22 years ago, and his control over 14 disciplined House votes makes O'BRIEN an astoundingly important figure.

The vanquished Missourian was 80-year-old CLARENCE CANNON, House Appropriations Committee chairman for 18 years and described by no less than Mister SAM the Speaker as "the most powerful man in this House."

President Eisenhower's budget this year provided $9,870,000 for the prison, which had been planned by the Bureau of Prisons, at an unspecified location, for 4 years.

IN STEPS CANNON

Representative KENNETH J. GRAY, West Frankfort Democrat, tried to nail the Illinois location into the bill. Committee Chairman CANNON wanted to do likewise for Missouri.

Failing in his objective, CANNON flashed his pencil and the entire item was cut out of the omnibus appropriation. CANNON is proud of his ability to slash billions of dollars out of presidential requests.

GRAY then went to his Illinois mentor, Uncle TOM, and asked for a hand.

O'BRIEN had a chat with CANNON who, like most influential Congressmen, was an old friend of his. Only 12 Members who were in the House when O'BRIEN came to Washington still are here. One is CLARENCE CANNON.

During their conversation, CANNON told O'BRIEN: "How can I say no to you, TOM?"

O'BRIEN left with the impression that CANNON had backed down. But, as he found out later, CANNON hadn't said yes either.

O'BRIEN FURIOUS

So when CANNON renewed his efforts to scuttle the prison, O'BRIEN was furious. Ordinarily he would probably have acceded to the committee chairman.

The test came when a $2 million appropriation was restored to the bill on the floor. O'BRIEN beat CANNON by a 2-to-1 margin on the floor vote, although no location was specified.

Moved over to the Senate, the bill went to a subcommittee which agreed to a $1 million appropriation.

Then, in a very strange development, Majority Leader LYNDON B. JOHNSON of Texas, declared that the specific Illinois site should be incorporated into the measure.

Senators JOHN SHERMAN COOPER and THURSTON B. MORTON, of Kentucky, the latter Republican National Committee chairman, objected. They wanted the prison for Kentucky.

JOHNSON, of course, won. He added that he, as majority leader, would "look favorably" upon a supplemental appropriation to continue construction of the penitentiary after the original money runs out.

JOHNSON UPHELD

A conference committee later upheld JOHNSON and the Senate version of the bill.

It was rare for a Cannon-deleted item to find its way back into an appropriation. It was rare for the majority leadership to depart from the recommendations of its committee. And it was rare for the Texas Senate leader to take such interest in this type of measure.

Why?

O'BRIEN works together closely with RAYBURN and Democratic Leader JOHN W. MCCORMACK, of Massachusetts, and had their help. Mister SAM and LYNDON JOHNSON also coordinate their activities to a remarkable degree between the two Houses.

Uncle TOM has been around a long time, has done favors for many people, and is well liked. He lives by a simple but strict code. He is forthright, never breaks his word, and never forgives anyone who does, which is why "CANNON used to be a friend of mine."

FRIENDSHIP SEEDED

The RAYBURN-O'BRIEN friendship was solidified back in 1937. RAYBURN, now 77, then was fighting for the floor leadership. His opponent had lined up Chicago support from Cook County Democratic Leader Pat Nash.

Nash consulted O'BRIEN about it, and O'BRIEN convinced him that the Chicago bloc of votes should go to RAYBURN.

Such was the seeding of a beautiful friendship which still blooms perennially in such forms as a prison for southern Illinois.

Strike by Physicians

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. CURTIS of Missouri. Mr. Speaker, on July 17, 1959, the Chicago Tribune carried an article by Joseph Cerutti entitled "Britain Faces Mass Strike by Physicians." This merits attention of my colleagues and I have requested permission to have it inserted in the RECORD

in order that they may be aware of the possibility of strike by physicians.

BRITAIN FACES MASS STRIKE BY PHYSICIANS—DOCTORS WOULD OPEN PRIVATE PRACTICE

(By Joseph Cerutti)

EDINBURGH, SCOTLAND, July 16.—The British Medical Association Thursday threatened a walkout by the 40,000 hospital and family physicians employed in the National Health Service if the Government rejects their demands for increased pay.

Five hundred delegates attending the association's annual meeting overwhelmingly approved a resolution supporting a strike against the Government service.

Britain currently spends more than $2 billion yearly on its health service. Since its inception in 1945, doctors have been awarded two small pay increases.

NOW AVERAGE $6,793

The average income of 21,000 family doctors employed by the Government is now $6,793 yearly. Pay rates for hospital doctors vary from $1,277 yearly for junior physicians to $15,678 for top consultants.

A commission set up by the Government to consider doctors' remuneration recently concluded hearings but has not issued its report. The doctors, through the British Medical Association Council, are urging at least 10 percent increase.

Submitting the strike resolution, Dr. R. B. Illing said, "We want a vote that will leave no doubt in the mind of the general public, of the political parties, and of the ministries that the medical profession will follow behind the council on this matter."

DOUBT FULL SUPPORT

Some delegates doubted the medical council would obtain support of 80 percent of all doctors which it considered necessary for a successful walkout. Some said young doctors could not afford a strike.

"Women doctors are absolutely opposed to it," said Dr. E. C. Dawson, of Derby. "We are not trade unionists. We are not disciplined."

Illing deplored use of the word "strike." He said the doctors would provide an alternative to the existing health service.

Courageous Edith Green

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. PORTER. Mr. Speaker, almost anyone can disagree with his or her enemies. It is when you disagree with your friends that you need moral fiber. EDITH GREEN, my colleague from Portland, possesses energy, intelligence, and courage. The latest demonstration of these qualities occurred with respect to the labor-management reform bill hearings in the House Labor and Education Committee of which she is an influential member.

EDITH GREEN is a true friend of working men and women in Oregon and elsewhere. She is a strong supporter of unions, their leaders, and their members. But, in her book and mine, this does not mean that union legislative representatives and union leaders are always right when questions concerning labor-management reform legislation come up.

These are complex matters, many of them full of disguised dynamite and unexpected twists. Persons of good faith can disagree about them. One provision can swing at Hoffa, miss him completely and end up harming good unionism. Another can on its face seem to be entirely justified but in fact not be based firmly on thorough investigations and hearings.

Union leaders and their legislative representatives are, almost all of them, experts acting in good faith for the interests of their membership. But, I point out, EDITH GREEN and many of her colleagues are also experts in this type of legislation. Disagreements are not reasons for recrimination or reproach. Friends can argue and still be friends.

Pressure tactics are something else: letters and telephone calls from the district, visits by delegations in our offices. These are fine if they have to do with the merits of the legislation but brazen if they seek to intimidate.

Under unanimous consent previously given, I am including an article by A. Robert Smith from the Portland Oregonian, July 23, 1959:

MRS. GREEN FEELS PRESSURE AS LABOR BUCKS REFORM BILL

(By A. Robert Smith)

WASHINGTON.—It is touch and go within the House Labor Committee this week as the pressures for and against an effective anti-racketeering labor bill mount. If the battlelines hold steady, a bill designed to curb some of the abuses disclosed by the McClellan committee will be approved today. But big labor is putting on a last minute high pressure campaign in an effort to water the bill down.

For 5 weeks, the 20 Democrats and 10 Republicans argued and maneuvered in secret sessions following Senate passage of the Kennedy reform bill.

In the maneuvering, GOP efforts, led by Representative KEARNS, Republican of Pennsylvania, to toughen the bill against unions were defeated generally by the votes of 18 of the 20 Democrats. Chairman BARDEN, Democrat of North Carolina, and Representative LANDRUM, Democrat of Georgia, voted with the Republicans, but still left a wide gap in the 18–12 voting lineup.

Democratic efforts led by LUDWIG TELLER, of New York, and JAMES ROOSEVELT, of California, to water it down with a Teamster list of 59 amendments were opposed by the 10 Republicans and BARDEN and LANDRUM—plus a small contingent of liberal Democrats who customarily are sympathetic to labor's aims and purposes.

This group included Representative EDITH GREEN, of Oregon, FRANK THOMPSON, of New York, STEWART UDALL, of Arizona, CARL ELLIOTT, of Alabama, and JAMES O'HARA, of Michigan. The Teamsters spearheaded by a sharp lawyer, Sidney Zagri, put on a high pressure campaign. One tactic employed on Mrs. GREEN was for Zagri to telephone Portland teamster officials and get them to telephone, wire, and write her—and to threaten to hold a protest meeting at the Labor Temple unless she went along with their proposals, which she felt would have virtually killed the bill.

Incidentally, a mimeographed sheet circulated by Teamsters under the title "Suggested Letter From Individual in His Own Handwriting" that was to inspire letters that would flood Congress, carried this interesting plea: "We don't need any amendments to the Taft-Hartley law because it is OK as is. I, therefore, ask that you vote against all of these bills."

Portland Teamster officials were brought in from time to time, but with Mrs. GREEN the strategy backfired. She got so irritated she told Zagri where to go.

Then, Tuesday of last week, the AFL–CIO, which had been sitting on its hands letting the Teamsters do the dirty work, invited this group of liberals into a conference which turned out to be a heavyhanded "You're either for us or against us" type ultimatum. Mrs. GREEN stalked out, after expressing her strong distaste for this move to water down what she regarded as necessary reform legislation.

At an earlier conference, George Meany pounded the table and demanded that Democrats strip the measure of its bill of rights and hot cargo bans. The Teamsters had pressured other unions into opposing the hot cargo ban by saying they wouldn't recognize picket lines if this ban went through.

Monday night the AFL–CIO called another meeting, didn't invite Mrs. GREEN, and tried to sell a new bill with fewer reform provisions. The heaviest pressure is being exerted against these four liberals, whose votes made a final draft possible last week, 17 to 13.

If they capitulate, the balance of power in the committee will make it possible for the reform bill to be scuttled. If they hold the line, their act of high courage will help give workingmen and the public at large needed protection from the sort of scandals Bob Kennedy and JOHN MCCLELLAN have been unfolding for over 2 years.

For Air Safety Stop Serving Liquor Aboard Planes in Flight

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my statement before the House Interstate and Foreign Commerce Committee on July 28 in support of my bill, H.R. 169, to prohibit serving of alcoholic beverages to passengers on aircraft in flight:

Mr. Chairman and members of the committee, to those who have never been up in a plane, and their number is diminishing daily, a visit to a major airport makes an impression that they will never forget. This is the gateway to the new world of air transportation that is developing with such speed, volume and complexity that the air is no longer free. Air traffic has already reached such proportions that strict discipline is required through inspection, regulation and control to insure the safety of planes and passengers.

Every big airport is suffering from growing pains. The crowded terminals, and the planes that are sometimes stacked in the sky waiting for room to come in, bear witness to the phenomenal expansion of the air transportation industry.

With the advent of faster jetliners, the need of further precautions for the protection of plane crews and passengers becomes urgent. It is the paradox of our times that, with the improving quality and dependability of machines and instruments and guidance systems, the incidence of human miscalculation or failure seems to increase.

In the realm of air transport where State boundaries are invisible and where an overwhelming percentage of the flights are interstate, and international, it is the responsibility of the Congress to recognize the

obvious dangers (within the airspace of the United States), and to pass those laws which are required in the interest of public safety.

Aviation experts agree that, in spite of all the amazing electronic equipment presently in use, the safety of planes especially in the vicinity of airports, depends upon the eyes, the reflexes and the judgment of the human being who is not an automatic pilot. Even under the best of circumstances, this demands a high degree of concentration and a sure skill. His efficiency would suffer if his attention were divided by distractions and dangers in the passenger cabin behind him.

Air discipline is an important factor, and there are solid reasons for it. When a plane is about to take off or land, and the sign in front of the passengers lights up with the warning: "No smoking. Fasten safety belts," responsible people obey. The stewardess makes a further check to make certain that no one forgets. This is no place for anyone not in his right senses, who rebels against restrictions and insists on having his own way in defiance of all safety measures.

Even though these two requirements are not in effect when a plane is airborne and on course, except when the weather is stormy, or flying conditions are rough, the inside of a plane at 7,000, 12,000 or 20,000 feet above the earth is no place for any rock and roll conduct on the part of inebriated passengers.

As far back as August 21, 1955, I asked the airlines to discontinue the practice of selling alcoholic beverages to passengers on aircraft in flight. I thought that the airlines should be given the opportunity to abandon this dangerous custom, by voluntary agreement among the various carriers. Over 3½ years have passed since then without corrective action by the airlines or the Civil Aeronautics Board. I think that they have been given sufficient time to do something about this problem. Their failure to do so leaves us with no alternative but to pass a law that will forbid this practice.

I do not base my argument in support of this bill merely on my own observations as a patron of the commercial airlines, or on the testimony of airline officials, or members of the regulatory agencies. I consider it most important that those most directly concerned with the safety of a plane, the crew members themselves, took the initiative in requesting this legislation. It is they who must contend, not with a theoretical possibility, but with actual, disagreeable, and dangerous incidents caused by passengers whose irresponsible behavior is due to the alcoholic drinks they have been served while the plane is aloft.

The Airline Stewards and Stewardesses' Association, and the Airline Pilots' Association have called for an end to this commercial airline policy, involving the major domestic carriers, of serving liquor to the passengers. It is difficult to understand why the airlines, that are so scrupulous regarding every other safety factor, are so careless regarding this one. In fact, by serving liquor, they encourage the unpredictable behavior of drunken passengers. This could lead some day to the inevitable tragedy that would have been prevented by the legislation which I propose today.

Many old people, the children, and sometimes infants are passengers on today's airliners. Their right to every reasonable protection is paramount, as even the indulgent few (to whom the airlines cater with bartender service) would admit in their sober moments.

Liquor has its place, but it should not be served aboard public carriers up in the clouds where customers, deranged by drink, could be the cause of a major air tragedy.

I earnestly submit that Federal legislation to prohibit the serving of alcoholic beverages to passengers on aircraft in flight, as called for in H.R. 169 which I have introduced for your consideration, be recommended by this committee, for the safety of the millions who travel by air.

What Makes the "Farm Problem"?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. MULTER. Mr. Speaker, a most interesting article has come to my attention and I commend it to the attention of our colleagues. The article is written by Murray R. Benedict and appeared in the New Republic of July 27, 1959.

Mr. Benedict, professor of agricultural economics at the University of California since 1931, has served as consultant on farm problems to both public and private organizations and is the author of many pamphlets, articles, and books, including "Farm Policies of the United States, 1790–1950" and "Can We Solve the Farm Problem?"

He states the problem well. I would now like to see someone come up with the solution.

The article follows:

WHAT MAKES THE FARM PROBLEM?

(By Murray R. Benedict)

It is hard for our highly urbanized society to understand the underlying causes of the farm problem or why, after nearly four decades of argument and expenditure of many billions of dollars, it has not been solved. In the first place, this is not primarily a party issue; party differences here tend to be matters of degree or direction rather than of basic concept. Even in the 1920's, the congressional approaches to the farm problem were surprisingly nonpartisan. In the very first years of that decade, the farm bloc was causing political headaches for a Republican administration backed on most issues by a predominantly Republican Congress. Much later, in the 80th Congress, the bills put forward by the House and Senate committees, both headed by Republicans, differed more than did the positions traditionally taken by spokesmen for the two major parties.

The depression of the 1930's brought fairly general agreement that something drastic had to be done to help the farmer. Generally speaking, farm-State Congressmen and farm leaders of both parties worked together to devise workable programs. And what they did, in the main was to give the administration almost a free hand to try any or all of the plans that had been seriously proposed. In its basic elements the current program is still essentially the one that took shape in that period. However, the setting has changed and the program has been subjected to severe distortions that grew out of wartime needs and legislation.

In the 1930's, the major cause of farm distress was a drastic decline in demand. Farm production was not badly out of line with the needs of the people of this and other countries. But with millions of workers unemployed and other millions on low or uncertain incomes, a normal flow of farm products could not be sold at prices that seemed fair either to farmers or to those responsible for making legislative and administrative policy. The impact of depression was not the same in the farm and nonfarm sectors of the economy. Nonfarm workers and businesses had to take their punishment in the form of unemployment and sharply reduced average incomes. Industrial production was cut back quickly and drastically. Agriculture, an atomistic and highly competitive industry, tended to maintain output and to take its losses in the form of sharply reduced prices.

It would have seemed logical to encourage agriculture to continue to produce the food and fiber needed and to restore quickly the purchasing power of consumers so that these needed supplies could move at prices the farmers could live on. But restoring demand after a severe depression, like the recovery of strength after a severe illness, is a slow process.

Meanwhile, farm prices were virtually at alltime lows and the overriding demand, both in business and agriculture, was for action on the price front. In agriculture, this took the form of efforts to cut back production in a variety of ways ranging from the plowing up of cotton and the slaughter of little pigs to the imposition of arceage controls and the subsidized destruction of fruits. But controlling production in highly competitive agriculture is by no means easy. This was not a situation in which boards of directors could decide how much to produce and could allocate resources accordingly. Neither was it one in which strongly organized unions could induce, or coerce, workers to refrain from working at less than standard rates. Instead, it was one in which there were at that time more than five million independent entrepreneurs, each making his own decisions as to how much to produce and most of them with strong incentives to produce as much as possible.

Production controls were thus only moderately successful, perhaps fortunately, so far as the economy as a whole was concerned. For if agricultural production could actually have been reduced enough to restore farm prices to the levels considered appropriate, it would have meant throttling down all of the economy to the low tempo then prevailing in the nonfarm parts of the economy. Consumers would have had less to eat and the cost of living would have been significantly higher. Farm prices did improve some though they were still low as late as 1940. Meanwhile, there was an abundance of food for those who had even a modest amount of buying power. Up to that time there was no clear indication of the great technological revolution that was to come later.

Yields of most of the major crops hadn't changed much in the 75 years for which records were available. Hence the effort to cut down production by reducing acres planted seemed logical. But the great agricultural machine had within it as yet unsuspected potentials for rapid expansion of production. The incentives for full use of these potentials were lacking, and parts of agriculture were being deliberately held down to keep output from expanding.

That situation was suddenly changed by the outbreak of World War II. Demand strengthened; prices began to improve; and underemployed labor was rapidly drawn out of agriculture. The coming need for more and more food, which a fully employed labor force would be abundantly able to buy, soon became apparent. Government policy shifted from an attempt to keep the lid on production to a positive effort to lift it. Outlets were assured; price incentives were provided; and production goals replaced quotas. Farmers had almost every incentive to put the industry into high gear and to produce as much as they could. Furthermore, there was a substantial reservoir of new machines, new techniques, and new knowledge that had

not been drawn on in the two preceding decades of low prices and capital starvation.

The results exceeded the most optimistic expectations. In spite of a growing scarcity of labor, agricultural production increased by more than 20 percent between 1939 and 1944, though it was already high in terms of past performance. Even under war conditions, and with heavy demands from abroad, U.S. per capita food consumption increased by more than 6 percent in the same period. Vast quantities of food were supplied to the Armed Forces and to our allies. Thanks in part to the effective response of agriculture and in part to favorable weather, consumers were spared the tight rationing and austere diets that most European countries had to contend with during the war years. The surplus problem was temporarily a thing of the past, and it was not to reappear until the end of the decade.

But in the effort to encourage all-out production and partly in response to the strong political power of agriculture, high levels of price support for farm products were written into the laws during the war years, including promises that these levels of price support would be continued for at least 2 years after the war. Later they were extended throughout the 1940's and into the 1950's. Agricultural production continued to increase and, at least until the end of the decade, this increase was needed.

As well as supplying the strong domestic demand, it enabled the United States to come to the rescue of a battered Western Europe on a scale never previously approached even in wartime. Much of Europe was stripped of livestock and short of machinery, fertilizers, and manpower. Its processing and transportation facilities had been destroyed or damaged and, to add to the difficulties, it encountered a 1946–47 winter of almost unprecedented severity and an extremely severe and widespread drought in the summer of 1947.

Our response was effective and generous. It was made possible by two things, continuing high production in U.S. agriculture and the special financing provided by the Marshall plan. Even during what some Europeans refer to as "the hungry period" minimum requirements for survival were provided. In 1948 alone we exported more than half a billion bushels of wheat, almost all of it to Western Europe. At the same time our own people were eating more and better food than ever before.

This abnormal need had slackened by 1950. Troublesome surpluses were in fact beginning to appear in some lines as early as 1949. The demand for farm products was revived temporarily, and largely speculatively, by the outbreak of war in Korea but soon slacked off and the era of ever-mounting stocks of storable agricultural commodities was upon us.

As a result of 10 years or more of strong incentives for all-out agricultural production, forces had been set in motion that were to plague us from 1953 on. Agriculture was geared for high production. Immense amounts of capital, in the form of machinery, organization, soil fertility, and know-how had become available. As yet, there was little incentive for farmers to slow down production. Farm prices, on what was virtually a free market basis, had been well above parity in the late 1940's and early 1950's. Parity itself is a generous yardstick, one that for two decades was looked upon as something to be hoped for but probably not to be achieved.

In the speculative boom of 1951, farm prices rose to alltime highs, thus giving further impetus to the technological revolution that had already gained a good deal of momentus. The new administration coming in in 1953 and faced by rapidly mounting surpluses urged som easing down of the wartime price incentives then in effect, but there was not only strong political opposition to such a course but very real doubt that lower prices would actually bring about the desired easing off of production. Once production capacity has been built up in agriculture it takes a very drastic decline in prices to cause it not to be used.

Labor was being withdrawn from farms and acreages were being held down, but the technological revolution could not be stopped. For American agriculture it was perhaps as fundamental and difficult to deal with as the industrial revolution that had unsettled Western Europe so profoundly in the period around 1800. No longer are American farmers accepting new ideas reluctantly and slowly. They are welcoming them eagerly and reaching out for more, that is, for new forms of organization, improved strains of crops and animals and new production techniques. Once such a process is underway, improvements that may at first be undertaken as a means of improving profits must be adopted as a way of reducing losses. Consequently, they tend to spread throughout the industry very quickly. The farmer who does not "go modern" soon drops hopelessly out of the running. Greater productivity would seem not to be something to be deplored, but so far as food is concerned, once a nation is as well fed as ours now is demand can grow only about as fast as population grows. If production increases faster, prices fall to unacceptably low levels or unused stocks pile up. Since our policy has been to support prices, the imbalance shows up in the form of burdensome and costly stocks held by the Government. This relates mainly to a fairly small number of products but they are important ones; for example, wheat, the feed grains, cotton, tobacco and, potentially, hogs. The products directly supported probably do not account for more than 35 to 40 percent of the total output of agriculture, but if these are cut back the problem spills over into other lines that are now managing fairly well without Government price support. The prices of beef cattle, fruits and vegetables, poultry products and, as of now, hogs are not supported by the Government.

But if we have more production capacity than we need, it is reasonable to ask why we don't simply withdraw enough of it to bring the situation into balance. That process has been going on for quite some time, but the upsurge in productivity has been at an even faster pace. Farm output in 1956 was more than 40 percent above that of 1939. The average number of persons employed in agriculture has declined markedly, from 12.7 million in 1935 to 7.9 million in 1956, and it is still going down. In 1910 the number so employed was 13.6 million though the total population of the United States was then only 91.9 million, scarcely more than half what it is now. In most countries, well over half the population is engaged in agriculture. Here, about 12 to 13 percent of the employed labor force produces agricultural products so abundantly that we are concerned as to how to make effective use of them.

But, even so, this does not explain why we should not reduce the number of farm workers still further if we still have too many. Part of the difficulty arises from the distribution of skills and resources within agriculture. The most efficient half of the agricultural labor force produces about 90 percent of the agricultural products that go to market. This leaves another 1.5 to 2 million farmers who not only do not fare well but cannot easily shift from agriculture to something else. Many are past middle age and have no other skills. Family and community ties hold them where they are. Pulling up stakes and relocating takes money and some little courage, especially if one has a family. Many of the younger farm people are, however, shifting to other occupations as is abundantly evident from the figures given above. But to make fully and quickly the adjustment that appears to be needed would involve more hardship and more drastic measures than society appears to be willing to countenance. Hence the process of human readjustment seems almost certain to be a slow and difficult one. A similar problem on a smaller scale has long been evident in the soft coal industry.

Much more significant is the fact that migration away from agriculture of small-scale, low-production farmers will not solve the problem. They will not take their farms with them, and the most likely outcome is that such lands will be merged into the larger, more efficient farms and will then produce more than they do now. However, the spread of industry and other lines of business to the rural areas has enabled hundreds of thousands of these small-scale farmers to supplement the returns from their farms with other income, and their average financial situation has, in fact, improved materially in recent years despite the fact that their income from agriculture has remained almost constant since 1945.

Though the overall results do not reflect it, the adjustments made in U.S. agriculture have actually been far more impressive than most people realize. Last year's record-breaking wheat crop was grown on an acreage that was nearly a fifth smaller than the 1947–56 average. It was 30 percent under the peak acreage of 1949. The cotton acreage harvested in 1958 was less than 12 million. In the 1925–30 period we were growing almost four times as many acres of cotton. The story is similar for many of the other crops. In 1958 we grew 3.8 billion bushels of corn on 73.5 million acres whereas in the early 1930's we were growing around 2.5 billion bushels on more than 100 million acres. The appallingly wasteful potato crops of the period around 1950 were actually grown on an acreage that was less than half what was considered normal and necessary in the early and middle 1930's.

I cite these figures not as either a defense or condemnation of current or past programs but merely to explain why adjustment has proved so difficult. The factors that go into agricultural production are land, labor, capital, organization, and technology. Of these, only the land factor can be brought under effective control, and even that is far from easy. Land taken out of one crop tends to be shifted to some other crop. Under American conditions, improved technology, once it is developed, tends to be adopted quickly and widely. Also it tends to feed on itself and to continue to grow. Capital investments are extremely difficult if not impossible to control. Labor will shift only as it has inducements and opportunities that make such shifting attractive. This leaves the burden mainly on the land factor. Hence the acreage control schemes and soil conservation programs of the 1930's and the soil bank plan of the present period. But land can't be taken out fast enough to offset wheat yields that have moved up from around 14 bushels in the pre-World War II period to 27.3 bushels in 1958, or a cotton output that averaged less than 200 pounds per acre prior to the middle 1930's and is now well over 400 pounds. Similar but less easily measured improvements have been occurring in the livestock industries.

Clearly we do not want to go on producing and storing things for which we have no use. But as in most other major economic adjustments, peoples' lives, homes, investments, and skills are involved. If we are to avoid very great hardships to very large numbers of people, changes are bound to be somewhat slow and halting. The stocks we have built up do not consist of the kinds of things most needed either in our own economy or in the world at large, but we need to find ways to make more effective use

of them and, as soon as possible, to stop building them up unless we do have use for them either here or abroad. There are political obstacles to be overcome as well as economic ones, and the problem may become more troublesome before it gets better. But we are at least coming to have a better understanding of the nature of it, which is an essential step toward solution. In the meantime, we can console ourselves to some extent by keeping in mind that an economy of overabundance is far easier to live with than one of extreme scarcity.

PROPOSED LEGISLATIVE REMEDIES

Congress and the President have reached an impasse of farm legislation. On June 25 Mr. Eisenhower vetoed two bills approved by Congress governing wheat and tobacco production, and there seems little chance that a compromise will be reached in this session. The President said in his veto that the proposed new wheat program providing tighter production controls and higher price supports was neither realistic nor constructive. By returning to "the discredited high rigid price supports," he said, it "would hasten the complete collapse of the entire wheat program." And Congress' proposal to stabilize price supports for tobacco, the President said in vetoing that bill, "would not prevent further losses" in foreign markets.

Senate and House Agriculture Committees are now examining alternative bills. But the outlook for agreement is bleak.

In reopened hearings held in the House since June 25, Ezra Taft Benson has simply reiterated the President's recommendations of last January. "You won't budge 1 inch," Representative POAGE, Democrat, of Texas, chided the Secretary. And Benson admitted under questioning that he would again advise veto of "any legislation that would raise price supports by one penny." The committee chairman in turn pointed out that "not a man from a wheat district on this committee agrees with that philosophy."

What Is Castro Trying To Prove?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New York Herald Tribune of July 26, 1959.

WHAT IS CASTRO TRYING TO PROVE?

Whatever his aptitude for the hard daily business of governing, Fidel Castro is supremely talented at arousing the Cuban populace. He now seems, unfortunately, to be exercising his principal talent rather than attending to the country's urgent needs.

It would be hard to interpret as anything other than a grandstand play the coy waiting game that has followed his dramatic resignation as Premier. Now that his supporters have whipped up popular pressures, he has declared that "we'll let the people decide on the 26th of July" whether he should return to office. In other words, he's ready to come back but he wants to be coaxed.

He undoubtedly will get his wish. A half million Cubans, including hundreds of thousands of "campesinos" brought in from every part of the island, some of them bedded down in the presidential palace, are expected to scream for his return at today's Havana celebration of the revolution's anniversary.

It's less clear why he wants to be coaxed, or what he expects to prove by it. Public adulation is a heady thing on which Castro obviously thrives. He may expect the fervency of the demonstrations to persuade his critics that he is the revolution, and that the revolution is Cuba's future. He may want to answer charges of dictatorship with dramatic evidence of popular support.

But support could be shown more convincingly at the polls than through organized spontaneity. And the criticism of Castro's rule stems not from doubts of his popularity, but from doubts of his ability to provide a stable and responsible government. His performance this past week, unfortunately, has offered little reassurance on this score, while this week's general strike testified better to the already demonstrated strength of his popular support than to his capacity, which has yet to be shown, to lead his country in orderly progress toward freedom and prosperity.

Special News Note: China Is China Not Formosa

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. PORTER. Mr. Speaker, China is China. Formosa is Formosa. Olympic athletes from Formosa should not pretend to represent China. Olympic athletes from China should not pretend to represent Formosa.

This was all Avery Brundage and the Olympic Games Committee decided recently. There was no "Communist infiltration" of the Olympic Games.

China is China, not Formosa. Even Chinese Nationalist Ambassador George Yeh has affirmed this fact and that the Olympic Games Committee was right in its decision on that basis.

It is no wonder that a committee of the other body concluded, on a second thought, to call off hearings on this subject. Drew Pearson with his usual perception and resourcefulness tells the story in his column in the Washington Post and Times Herald, Sunday, July 26, 1959, which, under unanimous consent previously granted, is appended hereafter:

A PROBE THAT DIDN'T EXPLORE

(By Drew Pearson)

The Senate Internal Security Committee, which started to investigate Communist infiltration into the Olympic games, sheepishly dropped the whole thing last week in order to prevent the biggest fiasco since the late Senator Joe McCarthy investigated the Army.

Chief Counsel Julian Sourwine, who sees the Red menace in any field that offers headlines, had jumped into the middle of the controversy over ousting the Chinese Nationalists from the Olympics. He saw in this a subversive plot to substitute the Chinese Reds.

Eagerly he subpenaed Avery Brundage, president of the International Olympic Committee, to explain why his committee kicked out Chaing Kai-shek's athletes. Brundage was rarin' to testify last Wednesday when he was suddenly canceled.

At the last minute, Vice President NIXON's former chief assistant, Bob King, persuaded committee members that bad publicity for the Olympic games would also hurt the winter Olympics, which are scheduled next February in California. King happens to be executive director of the Winter Olympics Committee.

But the clincher was provided by Senator TOM HENNINGS, Democrat, of Missouri, who warned that Brundage's testimony would make the Senate look foolish.

For here is what Brundage planned to say: "That the Nationalists weren't kicked out because of politics but because they erroneously claimed to represent the Chinese mainland; that no less than Chinese Nationalist Ambassador George Yeh had acknowledged the committee was right; that Nationalist athletes probably would be allowed to compete as Formosa's representatives, and that the Chinese Reds had been kicked out of the Olympics earlier for claiming to represent Formosa.

This was hardly the deep, dark conspiracy Sourwine had hoped to expose. HENNINGS convinced Senator TOM DODD, Democrat, of Connecticut, of this, and DODD used his influence inside the Internal Security Committee to call off the whole probe.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. ALGER. Mr. Speaker, I include the following newsletter of July 25, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

As adjournment nears, some major legislative hurdles have yet to be cleared.

HIGHWAY FUNDS

The highway financing problem is twofold: (1) How to provide the money for work already contracted to pay our bills; and (2) To analyze and permanently correct the road program itself, to prevent progressively increased costs resulting from improper estimates of the known problems. To pay our current bills, we have but two alternatives—To raise taxes (for example, the proposed 1½-cent hike in gasoline taxes) or to spend money from the Treasury's general fund. Those of us who oppose any tax increase maintain stoutly that this is the same problem we face throughout Government. If we're to make ends meet, a careful and comparative analysis of all Government expenditures is called for, so that we can eliminate the less necessary ones. On the second point, revising the road program itself, it's important to know why cost estimates have risen sharply in just 2 years—from about $25 billion to $37 billion. Some components: (1) A 12-percent increase in construction costs; (2) Location of highways closer to cities and towns than originally planned, requiring more complex interchanges, additional lighting, etc.; (3) Cost of relocating utility lines now figured 50 percent higher than earlier estimates; (4) Wage setting by the Federal Government (Davis-Bacon Act) has added 5 to 7 percent to wage costs. Acquiring right-of-way has cost far more than anticipated, due to the 90–10 cost-sharing setup. After all, 90 percent of the dollars used by States and localities to buy right-of-way has been other people's money.

HOUSING

Once again the meritorious FHA insurance program is being held as a sort of hostage by those in Congress determined to jam through controversial spending plans for urban renewal, public housing, and the like. In an effort to escape disapproval of a budget-conscious administration, Congress lumped these programs together in an all or nothing package with the almost universally approved FHA programs. Rebuffed by a Presidential veto, which specifically called for a scaling down of urban renewal grants and no new public housing authorization (over 100,000 public housing units already authorized are as yet unbuilt), leaders in Congress are presently marking time, as FHA runs out of insuring authority. The odds are that there will be a housing act of 1959, but as in 2 of the last 3 years, it will be a rush-rush no time to argue affair presented during the closing hours before Congress adjourns. When the House last year refused to be stampeded in this manner, there was no omnibus housing bill at all. This time, however, the innocent hostage, FHA, would be out of business.

LABOR

There will undoubtedly be a labor "reform" bill of sorts, simply because few legislators can afford to return home without having voted for something in this field. Despite avowed labor opposition, just what "reforms" the Senate-passed Kennedy bill would accomplish are hard to imagine, and the bill approved by the House committee this week is a decidedly weakened version of the same thing. Floor debate, still weeks away, will see several substitute bills with some backbone offered. By "backbone," I mean at least provisions which: (1) Safeguard workers' money in union treasuries; (2) guarantee every man, worker or employer, his day in court by eliminating no man's land gap between Federal and State law; (3) protect rank-and-file members by guaranteeing democratic procedures in unions and prevent reprisals against members by union officers; and (4) outlaw the indefensible use of secondary boycotts and blackmail picketing.

FOREIGN AID

The mutual security authorization has already passed; but we have yet to appropriate the money. I can imagine few Congressmen who could be said to be for or against foreign aid, as such. Many of our military assistance programs are wholly justified, and that's true, too, of some ventures in the field of purely economic aid. In the broad ideological struggle going on today, however, I'm at a loss to know why U.S. taxpayers should have to help finance the undertakings of Communist governments (as in Yugoslavia and Poland) and to subsidize Socialist experiments of others the world over. Moreover, to assert that the requested amount is the rockbottom figure acceptable is to ignore innumerable reports by the Comptroller General and others who have pointed out appalling waste and mismanagement in the program. Like the housing bill described earlier, it comes down to how much outrageous boondoggle one is willing to accept in order to continue other admittedly good programs. For one, I'm convinced the foreign aid appropriation can and should be pruned considerably.

CIVIL RIGHTS

Another rights bill is in prospect, though the Commission set up by the bill passed 2 years ago is still gathering information on which to proceed. The necessity for going any further now strikes me as entirely political. Balked in their drive for more free-spending Government welfare programs, many of the superliberals feel they can't go home without a liberal record of accomplishment. The papers have been full of their dissatisfaction with the majority leadership. They feel another rights bill is a minimum must. No one has yet defined or specified the rights we're supposed to be protecting, but apparently Congress is going to protect them more stringently.

Limitation of Power of States To Impose Income Taxes on Certain Income

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I introduced today a bill to limit the power of the States to impose income taxes on income derived exclusively from the conduct of interstate commerce.

Senators BUSH and KEATING have introduced an identical bill in the Senate. It is intended to eliminate a chaotic condition created by a recent decision of the U.S. Supreme Court which held, by a 6 to 2 vote, that the commerce clause of the Constitution of the United States does not prevent a State from taxing a foreign corporation's net income derived from sales within that State even though such transactions are exclusively in interstate commerce.

The decision, handed down February 24, 1959, in the cases of T. V. Williams against Stockham Valves & Fittings, Inc., and the Northwestern States Portland Cement Co. against Minnesota, has thrown the commercial world into confusion. Businessmen are apprehensive that they may be forced to pay income taxes in every State in which they sell their goods. It has opened up a Pandora's box of difficulties and harassment for all businesses, especially the smaller ones. It will take lengthy study to determine its full implications. There can be little doubt, however, as to the serious implications which the decision holds for firms engaged in interstate commerce who now, in each State to which they ship goods, find themselves open to possible liability for income tax levied by that State on profits derived from sales attributable in some fashion to that State. Hitherto, such firms had come to expect that such profits were not taxable by a State unless the firm was engaged in intrastate business or otherwise legally domiciled therein. Also, there is the very serious possibility of double taxation of profits from the same transactions.

In the application of the Supreme Court decision we find that the mere fact that a company sends a salesman into a particular State for the solicitation of business may subject that company to income taxes by that State.

My bill is designed to provide at least a partial remedy. It is not a total solution to the problem but it will, if enacted, afford relief to those companies engaged in interstate commerce whose only activity in other States is sales solicitation and where no stock of goods, plant, office, warehouse, or other place of business is maintained therein.

I feel that the bill is of sufficient urgency that the House make a special effort to bring it to a vote in this session of Congress.

The bill is as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, after the date of the enactment of this Act, no State, or political subdivision thereof, shall have the power to impose a net income tax on income derived by a person exclusively from the conduct of interstate commerce, solely by reason of the solicitation of orders in the State by such person, or by an agent or employee of such person, if such person maintains no stock of goods, plant, office, warehouse, or other place of business within the State.

Legalized Blackmail

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. BYRNES of Wisconsin. Mr. Speaker, I include as part of my remarks a copy of a letter which the Teamsters Union has sent to Chicago trucking companies announcing the start of organizational picketing.

The letter demonstrates more graphically than any explanation how legalized blackmail is employed by the Teamsters to extend their empire.

It should be noted how carefully the letter is phrased to stay within the limits of the law. There is nothing in it which would lay the Teamsters open to any legal difficulty under present statutes.

Yet, read in its entirety, the Teamsters' letter say to the employer:

Either you get your employees to join our union, or we promptly put you out of business.

It does not matter whether the company's employees desire another union, or in fact, whether they desire no union at all. Under present law as it is used by the Teamsters, those employees will join the Teamsters or they will be out of a job.

Notice the stress placed by the Teamsters on the fact that the purpose of the picketing is solely educational "to call to the attention of union members and supporters of organized labor that your office and clerical workers" are not members of the Teamsters Union. Yet, note, too, the threat of the "economic detriment" which the employer will sustain as the result of the withholding of patronage from his concern by union members and sympathizers.

How will this economic pressure be applied? Simply by throwing up a stranger picket line around the company's place of business, which union members will not cross, ending the company's operations.

The employer has little choice. He will either act as a recruiter for the

Teamsters Union, persuading his employees to sign as members, or his company will go out of business.

The employees have little choice. Either they sign up with the Teamsters or they lose their jobs.

There is little wonder that James Hoffa and his Teamsters are fighting tooth and nail against any restriction on blackmail picketing, or on any of the other practices, such as hot cargo clauses and secondary boycotts, which form the very basis for the corrupt power they wield without regard for the public interest.

I do not think the American people will long stand for the deprivation of their basic freedoms at the hands of any unscrupulous organization, labor union or otherwise. It is time the Congress woke up to that fact.

The letter follows:

LETTER FROM TEAMSTERS LOCAL 710 TO CHICAGO TRUCKING COMPANIES

Local 710, I.B.T., has decided to embark upon a campaign to organize your office and clerical employees. To induce your employees to join this union, we shall begin to picket your establishment on or about the 11th of May 1959. We assure you that the picketing will be entirely peaceful. We have instructed our pickets not to threaten, intimidate or coerce anyone. If there is any violation of those instructions, please advise us and we shall see to it that corrective action is taken immediately.

We wish to make it clear to you that local 710 does not at this time represent and of course we do not claim to represent, a majority of your office and clerical employees. Local 710 does not ask you to recognize it as exclusive bargaining representative for your employees or, indeed, ask you to recognize it for any purpose at this time. The purpose of our picketing is solely to call to the attention of union members and supporters of organized labor that your office and clerical employees are not members of local 710.

We hope that the demonstration of support of local 710 in its efforts to organize, which this picketing will produce, will persuade your employees to become members of our local union. When they do, they will join the thousands of other employees who are affiliated with the great International Brotherhood of Teamsters. In engaging in this picketing campaign, we are speaking for the members of our organization who are employed in businesses like yours and who feel the brunt of the unfair competition of your unorganized employees.

This point we must emphasize, we are not making any demand upon your company at this time to agree to or execute any contract with our union covering any of your employees. Under the law your company is permitted to recognize and bargain with our local union only after a majority of your employees have authorized the union to represent them. Therefore, even if your company should now or hereafter offer to recognize our union or enter into collective bargaining with us our union would refuse such an offer and we would continue to refuse until your employees lawfully authorize us to represent them. Should your employees desire to join our union, they may apply for membership at the office of local 710, 4217 South Halsted Street, Chicago, Ill., or ask one of the pickets for a membership application card which they can fill out and return to him. When we have received applications from a majority of your employees, we will contact your company further.

You should also understand that it is your right under the Constitution of the United States and under the National Labor Relations Act to advise your employees of the economic detriment which you and they will sustain as a result of the withholding of patronage from your concern by union members and sympathizers as long as they remain nonmembers of our union.

You may, in the exercise of your lawful rights, explain those detriments to your employees and urge them to apply for membership in the union and thereby acquire for themselves and for your company the goodwill of our union and its friends. You may not, and we are sure that you will not, threaten to take economic reprisal against your employees, or grant them benefits, to coerce their choice in this matter. However, we feel sure that if your employees, who have been carefully taught to look to you for leadership on matters affecting their employment, are convinced that it is your sincere desire that they join the union, they will quickly realize that acquisition of union membership at the earliest opportunity is in their best interest.

Yours very truly,

LOCAL UNION NO. 710,
JOHN T. O'BRIEN,
Secretary-Treasurer.

H.R. 3

EXTENSION OF REMARKS
OF
HON. ANCHER NELSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. NELSEN. Mr. Speaker, in recent weeks there has been a good deal of debate and discussion relative to H.R. 3 as passed by the House on June 24, 1959. During this debate reference was made to the rural electrification program and some discussion took place relative to a letter from Clyde T. Ellis of the National Rural Electric Cooperative Association of June 16, 1959. This letter recommended that H.R. 3 be rejected by the Congress of the United States. As a followup of this discussion, I received on July 22, 1959, a letter from the White River Electric Cooperative in Branson, Mo., from which I quote the following:

Because of your recent direct association with rural electrification cooperatives of the United States, plus your interest over the entire life of the rural electric program, we address this correspondence and enclose an excerpt from the minutes of our regular board of directors meeting, July 16, 1959.

The board and I ask that you endeavor to get a copy of the excerpt into the CONGRESSIONAL RECORD.

In view of this request, Mr. Speaker, under unanimous consent, I ask that the following resolution be included in the RECORD.

EXCERPT FROM MINUTES OF REGULAR MEETING OF BOARD OF DIRECTORS, WHITE RIVER VALLEY ELECTRIC COOPERATIVE, INC., BRANSON, MO., JULY 16, 1959

Whereas we unanimously agree that rules of interpretation governing questions of the effect of acts of Congress on State laws should be established;

Whereas, as we understand H.R. 3, which was passed by the House, June 24, 1959, by a vote of 225 to 192, will establish such rules if enacted into law;

Whereas we believe in the following as basic relative to labor laws:

1. State jurisdiction if not preempted by the Federal Government.

2. Bill of rights for union members themselves.

3. Picketing, designed to force or coerce employees into unions against their will, should be regulated.

Now therefore, we, the board of directors of the White River Valley Electric Cooperative, Inc., do hereby

Resolve, That in the best interest of our approximately 30,000 electric consumers, request and urge that our U.S. Senators concur with the House action on H.R. 3 and hasten the day when such bill will become a law on our Federal statutes. We unanimously feel that this is in the best interest of our members and the general welfare of the citizens of the great State of Missouri.

We strongly disassociate ourselves from the opinion voiced against the bill by Mr. Clyde Ellis, general manager of NRECA as shown by the CONGRESSIONAL RECORD. We further urge that the members of the Missouri congressional delegation disregard the statement against the bill for the reason that this entire matter had not been considered by the membership of NRECA before Mr. Ellis voiced his opinion.

Furthermore, we feel that such an expression by him without our knowledge and approval is not in the best interests of the rural electrification program.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. ALGER. Mr. Speaker, I include the following newsletter of July 18, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

A PREVIEW OF SOCIALIZED MEDICINE

H.R. 4700, the Forand bill, would again increase social security taxes (already scheduled to double during next 10 years) and extend hospitalization, nursing-home care, and surgical service to recipients of social security benefits. The prospect of socialized medicine is no less controversial now than before. Many arguments have been presented for and against. I find little to commend compulsory health insurance and much that condemns it. Therefore, I shall present the arguments of witnesses against the Forand bill, which, in total, comprise an overwhelming body of material to discredit such compulsory health insurance, even though any one or a combination of these arguments themselves could be eliminated from consideration, according to each individual's judgment.

Constructively, there are far more sensible alternatives, some now in effect, to provide medical care for the aged. These include the rapid growth of progressively better voluntary health insurance plans. The present State and local public assistance programs already provide free care for those unable to pay. Those on State welfare rolls and the "medically indigent," while a community problem, hardly justify a vast compulsory insurance program covering all of those over 65 on OASI. Of the 15 million people over 65 today, 6 million are excluded under this bill, since they are not eligible

for social security; 9 million others are already covered under voluntary medical programs. This leaves about 3 million individuals who might benefit from H.R. 4700. True, new and better insurance plans need to be developed, not nullified and killed by Federal compulsory insurance, alongside which no private plan could survive. Better medical care is more certain to result from the normal incentives of free society than Government regimentation and compulsion.

Specific criticisms include:

1. Compulsory Federal insurance will kill voluntary insurance programs, an irreversible step.

2. The Forand bill does not cover those who need medical help, but only those over 65 now covered by OASI.

3. The cost of this program is not known, though estimated to be between $1.126 and $2.3 billion per year at the outset, then going up.

4. As the HEW report states, "The existence of a problem does not necessarily indicate that action by the Federal Government is desirable."

5. Those now over 65 immediately will receive medical care free, without any contribution, the cost charged to wage earners of the future.

6. Since no needs test is included, those not wanting this Federal insurance will be forced to accept it and pay for it.

7. Health problems of the aged are varied, while this plan would provide for but a few of them.

8. The Forand bill is a "foot in the door," its expansion necessarily will follow, only because of its own inequities; the age requirement will be removed; all those covered by OASI will be included; and finally all citizens, for complete socialization of medicine.

9. The alleged free choice of the Forand bill is a misnomer: (a) There is no choice whether or not you want this compulsory health insurance or whether you pay, and (b) there is no freedom of selection of doctors, hospital and nursing facilities, only a choice of those presented to you. This is not a free choice.

10. If medicine is socialized then other services and industries will be socialized.

11. There is no "right" to have free medical care, food, clothing or other necessities (unless the voters so choose).

12. Medical and hospital care is now available to those who need it and cannot afford to pay.

13. The story of Federal control and regimentation is this—Federal administration, certification of doctors, hospitals and nursing homes, fixing of fees and costs, promulgation of regulations, and enforcement with fines and jail sentences. These total socialized medicine without recourse.

14. The search for better insurance plans and medical care will also be discouraged by Federal regimentation.

15. Diagnostic service, internal medicine and other forms of medical aid are not covered by the Forand bill, thereby creating an inequity.

16. Where health facilities and services are provided free of cost, a tendency can be expected toward excessive utilization resulting in overcrowded facilities, malingering and indigency, the normal human reactions (the end result ? poorer medical care). Britain's socialized medicine can teach us the lessons we need to know about the unhappy effects of socialized medicine on all the people, lessening the quality of medical care. Let us benefit from their experience.

17. A Government program normally follows this pattern: The cost is underestimated and the Government overcommits itself in extending service.

18. No Government program is justified until the voluntary plans have been found inadequate.

19. No Federal legislation should be forthcoming until the findings of the White House Conference on Aging in 1961 are known and studied.

20. And many others. The great overriding danger in the consideration of a compulsory Federal program is always the same. Does the recognition of a "need", in this case that sick people need medical, immediately presuppose a Federal solution. I suspect that politicians are afraid that "being against the proposed Federal legislation" will be confused in the voters' minds with "being against the need itself", in this case helping the aged getting medical care.

Peoria Journal Star Editor in Russia

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks I would like to submit herewith the third and fourth in a series of articles written by the editor of the Peoria Journal Star upon his return from a recent trip to Russia.

REDDISH HAIR, GREEN EYES: THAT'S SVETLANA

(Editor's Note.—Charles L. Dancey, editor of the Journal Star, returned recently from a month's tour of the Soviet Union and at present is attending a National Strategy Seminar in Washington, D.C. Because of heavy censorship restrictions, Dancey made no effort to send dispatches from Russia. His daily articles, however, will be carried under dateline of the areas he visited.)

(By Charles L. Dancey, editor, the Journal Star)

ODESSA.—As of now, I am stuck with a guide-interpreter as forecast—a girl in her twenties, Muscovite, not Ukrainian, with reddish hair, green eyes, a very pretty face, and an accent like Gregory Ratoff.

Her name is Svetlana.

She showed me around town, most of the time riding in a car driven by a rugged Ward Bond type who solemnly minds his own business. This sort of thing isolates a person pretty well.

All I saw was the beautiful opera house (prerevolution) with its many statues of the Greek muses. The Germans stabled their horses in this magnificent building when they took Odessa. The city hall also has two huge Greek statues on either wing. This is a far cry from the appearance one associates with Soviet cities—and the biggest statue in the biggest square is not Stalin or Lenin but of the poet Pushkin.

Odessa gets its name from an ancient Greek city on or near the site of the present city. In fact, the Russian spelling of the name and pronunciation is almost identical with the title of Homer's classic Odyssey.

The Greek theme has been maintained throughout, although my guide seems to have no knowledge of the city's heritage or even of the Greeks themselves.

Visiting a sanitarium I saw my friend of the plane trip sitting on a bench. When we had parted at the airport he had shaken my hand in both of his and presented me with his one-way mirror sunglasses. I went up and shook hands with him, but he seemed as stiff and formal today as he had been demonstrative before.

Svetlana seemed upset by this meeting until I explained that we had sat together on the plane. She refused to interpret my first question to him which I made in English in her presence, while she fired questions at me. And she cut the whole thing short preemptorily.

She said as we walked away, following her rapid-fire exchange with the man in Russian which I couldn't begin to follow, that he was being rested in Odessa and would be there for about a month.

He was just sitting on a bench, fully clothed, doing nothing. It did not look like a very exciting vacation by our standards, but maybe it is sensible. I must say, however, that he looked plain bored to me.

In the evening, I was permitted to go to the summer theater alone * * * but they obtained the ticket for me in advance, complete with row and seat number. It was the Don Cossacks in an open theater in a park not unlike the St. Louis municipal theater setup.

The Cossacks were, of course, terrific, especially the dancing—and I was front row center for about $1.70 in our money.

At intermission, a man walked straight up to me in the crowd again and said, "You speak English." (I hadn't said a word.) He said that he was a writer and a translator of books. He spoke excellent English.

He said he is now translating Rousseau's works into Russian for the first time. I asked how many languages he speaks.

He said French, English, German, and Russian.

"What is your native language?" I asked. (He didn't sound like Gregory Ratoff.)

He replied: "They say that a Jew has no native language."

He smiled when he said it, but the smile only exposed the open wound more clearly.

I wonder what else they say.

BALLPOINT PEN BEAUTIFUL TO YOUNG RUSSIAN

(By Charles L. Dancey, editor, the Journal Star)

ODESSA.—Svetlana and I took the boat to Fontana Beach and passed Arcadia Beach on the way. I halfway expected the next one to be called "Al Fresco Beach."

En route, I told her I met an English-speaking man at the theater.

"Oh," she said. "And did he walk back to the hotel with you?"

(He did walk back to within a half block of the hotel at about midnight the night before—and Svetlana and I had met about 9 a.m.)

On the boat, Svetlana broke out in goose-pimples from the cool breeze and went up to the bow to sit in the sun. I stayed on the stern. Three teen-age crewmen immediately came up to me.

They knew a little—very little—English. We talked. I talked in Russian when I knew the right words and trying English words when I didn't. They talked in English when they knew the right words, and tried Russian when they didn't.

They asked about Louie Armstrong, Benny Goodman, and Van Cliburn, and wondering if "rock 'n roll" is still very "bolshoi" (big) in America.

They asked about TV and said they have a station in Odessa but it is experimental but assured me there are two stations in Moscow.

I told them we have an Odessa, Tex.—also a Moscow in the United States. And that I live in Pekin—"nyet kitai" (China). They laughed loudly at the thought of a Pekin, U.S.A.

I told them about our vending machines, showing them a U.S. dime, and telling them what could be bought with it automatically.

I wanted to give them a ballpoint pen but they wouldn't take it. Finally, I got them to "match" coins, and awarded the "winner" the pen.

He just sat looking at it and kept repeating: "Eta kraseevee, kraseevee." (It is beautiful, beautiful.)

Svetlana returned and the boys melted away, one of them giving me the wink as he turned into the wheelhouse. A moment later the public address system tuned up and out blared, "St. Louis Blues."

We arrived at the beach and found it crowded—although as usual more sunning than swimming. Svetlana asked if women are "fat" in America. I told her it is fashionable to be slender. (There was a real beef trust on the beach.) She sniffed and said: "It is fashionable to be slender here too." (She is slender.)

On the way back from the beach she asked about my house, and was stunned when I said it has seven rooms. I explained that is is an old house, but this meant little to her. I said a lot of people actually build their own homes.

"But not the rich," she said. "The rich have them built for them by the poor."

I told her nobody can get anything built for them unless he pays these "poor people" more than 30 rubles an hour.

I told her that 100,000 people pay 5 rubles a week for our "gazyeta" (newspaper) in an area of about 400,000 people.

"Almost every family?" she said—still looking for those masses of poor people when by Russian standards we are all rich.

After repeated demands by me, we finally went to the stores. I badly wanted to buy something for a friend whose family came from Odessa originally—and I wanted a swimming suit to take a dip in the Black Sea.

I found that she had good reason to resist. The stores were dingier and the merchandise cheesier than of any store in Peoria at any time in my memory—and there were no swimming suits, or much of anything else.

Then she wanted to go to a movie—a very good one was playing—so we went. There were wooden chairs in a large room, and a Hungarian film was shown about an evil boss who tempted the poor working girl with a new dress so that she abandoned her poor unemployed lover for the capitalistic boss.

The one love scene in this film would make Brigitte Bardot look like a Sunday school teacher.

I learned Svetlana had seen it three times and thought it was fabulous. This is appalling.

Obviously these people can't even imagine what America is like.

Achievement Award

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent to have inserted in the Appendix of the RECORD a speech delivered by Herbert S. Edwards, a young man who participated as a delegate from Colorado in the Junior Chahmber of Commerce National Award and was successful. This speech was given at the banquet and Mr. Edwards received the high honor for presenting the outstanding speech. The speech is as follows:

In this age of unrest and uncertainty, security is foremost in almost everyone's mind. I believe we have placed too much emphasis on the material aspects of life, security being one of these. It seems to me that my true security is not tangible. Material security is always in danger from fire, flood, decay, and all other means of destruction. Thus, I think a person who depends for his security on material bases such as wealth or physical strength has no true security, for he has only temporal resources to cope with loss, defeat, and disaster. Lasting security cannot be guaranteed. If material and physical security are so important, what would happen if one should lose them? After all, is a guaranteed, secure future really as safe and important as so many think? Prison inmates have complete economic security.

One's self-reliance will be built up only by forcing himself to take the initiative and become a nonconformist in the sense of standing by what you believe in the face of criticism. Today's desires to belong to a group and to follow the crowd certainly relieve a person of self-reliance and the need for intiative. Many people place themselves in a clique for security, only to find themselves lost in the group. A person who balks at following the crowd or questions its authority, may find himself on the outside, looking in. A group can take away security just as fast as it can give it. A person who has depended upon a group for all his security, and has either been rejected or become separated from his group is certainly without any means of self-assurance. To belong to a group may give one temporary security, but to become detached may result in permanent insecurity and disappointment. Where, then does true security lie, and how can one find it?

I believe that my true security is in the realm of the mental and spiritual phases of life. True security is not attained except when one relies on himself and his own resources of character and the Spirit for his future. We can build up our resources if we can develop self-reliance and self-confidence in ourselves and our work. Self-reliance, in turn, may be developed by relying upon our own initiative. Progress is made because of insecurity. Complete material security may discourage initiative and self-reliance. Therefore, I believe that if one's true security is placed in self-reliance, initiative and resourcefulness, he has a lasting security which will assist him in overcoming or effectively dealing with adverse circumstances whenever they arise. My true security, then, is not to be found outside myself in the temporal things of life, human or otherwise, but can be built up only within myself.

On the Square—With P. Wendell

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. LEVERING. Mr. Speaker, under leave granted me to revise and extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I am inserting a column, "On the Square—With P. Wendell," carried in the July 9, 1959, issue of the Newark (Ohio) Advocate, a fine newspaper published in my 17th Ohio Congressional District.

I understand that Paul Reed, editor of the Advocate, writes this column. In any case, I congratulate the author for his penetrating insight into public business and affairs.

As you and I know, Mr. Speaker, we in Congress receive many, many communications from many fine individuals. Unfortunately, in many instances, some people are not informed on public issues, and indeed, they realize their paucity of knowledge and their lack of qualification to render sound judgment on pressing public questions. I do not dispute anyone's right to have an opinion, however erroneous it may be, but I believe that we should encourage the dissemination of information by people who are in a position to get facts, and then have the background of knowledge needed to interpret the significance of those facts.

It is heartening to me to see the author of this column showing such discrimination and taste in the use of his words and his views. It is plain that he has put a finger on many sensitive, and oft-overlooked, spots in our public picture. I commend this column to the considering of my colleagues. The material follows:

[From the Newark (Ohio) Advocate, July 9, 1959]

ON THE SQUARE—WITH P. WENDELL

Harvesttime is here again, the season of the year when the good earth yields its rich bounties.

Grain fields that spread acroes the countryside like seas of restless gold are now being shorn into stubble.

And corn that stood knee high by the Fourth of July is gaining bold stature soon to burst into heavy silken ear.

By strange circumstance typical of the times, bumper crops will contribute little toward checking the spiral of prices.

The farmer's profits will show scant increase and the cost to the consumer to spread a bountiful board will not be reduced.

Riding the crest of prosperity, the American people will continue to eat high off the hog but they will pay a fancy price for the experience.

Another bumper harvest will inevitably aggravate a vexing situation pouring new streams of surplus crops into costly storage.

The taxpayer will catch the full impact of a farm aid program that adds billions to the Nation's tax burden and strikes a heavy blow against every private purse.

Price supports show little evidence of helping the small farmer, rather, a magnanimous gift to the large-scale operator who needs little help.

It is difficult to explain the towering surpluses, bought and stored at fantastic cost to the taxpayer and impoverished segments of society going hunrgy.

The Nation's crop surplus is one of the major reasons why taxes are soaring skyward and only a comparative few reap the benefits.

Foreign aid is another festering thorn channeling billions overseas to rebuild foreign countries into a strong competitive position on the world market.

Restored by American taxpayers' dollars these nations are now threatening the economic survival of a benevolent people who succored them in their postwar distress.

A tax-burdened citizenry takes a dim view of the new taxes that will be imposed before Congress and the Ohio Legislature adjourn.

The President loudly decries the profligate spending of the current Congress and he threatens to veto extravagant measures.

Yet the President and his staff cost the taxpayer more than $5 million a year—eight times the amount spent in 1938.

His Democratic predecessors were denounced for using the presidential yacht *Williamsburg*, yet little is said about the President's luxury airliners.

The White House has at its diposal a fleet of planes, helicopters, cabin cruisers, and limousines at a fabulous upkeep cost.

Crushed by taxes, the public has a right to cry out for economy and an exemplary place to start would be the White House itself.

Centennial Year Opens for the Oregon Shakespearean Festival in Ashland

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. PORTER. Mr. Speaker, the Oregon Shakespearean Festival's company opens its 19th annual season today, July 28, in Ashland.

The four plays in 4 days schedule of the famed company offers playgoers "Twelfth Night," "King John," "Measure for Measure," and "Antony and Cleopatra." There is also this year an Elizabethan-style production prepared especially in honor of Oregon's centennial year. It is "The Masque of the New World."

Many people deserve credit for this continuing festival, first of its kind in the United States. This year the plays will be given in a new home made possible by loyal supporters who financed construction of the theater, which is like that used by William Shakespeare. Under leave to extend my remarks in the RECORD I include the following editorial which appeared in the July 20, 1959, Portland (Oreg.) Journal, "Ashland Geared for Shakespearean Fete":

ASHLAND GEARED FOR SHAKESPEAREAN FETE

"All the world's a stage,
And all the men and women merely players.
They have their exits and their entrances;
And one man in his time plays many parts,
His acts being seven ages."

These magic words won't be heard when the Oregon Shakespearean Festival's company opens its 19th annual season on July 28 in Ashland, but they will be borne out by many of the actors and actresses who will appear in "Twelfth Night," "King John," "Measure for Measure," 'Antony and Cleopatra," and "The Masque of the New World," an Elizabethan-style production prepared especially in honor of Oregon's centennial.

Rehearsals are well underway for the four dramas and the masque, with several men and women returning who have charmed audiences in the past by portraying Shakespeare's characters in keeping with the traditions of the stage of his time. From auditions held in June, Angus L. Bowmer, the theater's founder and producing director, has selected casts which should make this season one of the best.

In addition, the plays will be staged for the first time on the new Elizabethan stage. The structure, financed by donations from the theater's international patronage, has been completed. It replaces a building which was condemned several years ago as a firetrap.

Since 1935, its first year, the festival's fame has grown until it now bears an international reputation for the excellence of its productions. Those who enact some of the "seven ages of man" deem it a privilege and an honor to be selected for one or more parts. And it speaks well for the management that many players are eager to return year after year.

In these days of filmed entertainment one finds welcome relief in watching living men and women bring to life the characters which the greatest of all playwrights used to mirror human emotions. We wish all success to those who make their exits and their entrances in Ashland's 19th annual revival of the bard's works.

Bank for Rural Electric Co-Ops

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. ALGER. Mr. Speaker, in supporting Secretary Benson's proposal to establish an REA Bank, Earl W. McMunn in the June 20, 1959, edition of the Ohio Farmer commented succinctly and sensibly on the absurdity of our Government lending money to going organizations at lower rates of interest than the Government itself has to pay in order to borrow the money in the first place:

BANK FOR RURAL ELECTRIC CO-OPS

Secretary of Agriculture Benson's recent proposal that REA systems have their own bank makes a lot of sense. In making the proposal, the Secretary pointed out that REA and the rural electric cooperatives have now come of age. They are strong enough and mature enough to begin to stand more on their own feet. The facts seem to indicate that the Secretary is right.

What Secretary Benson proposes is a permanent financing plan for REA with less dependence upon direct Government loans. He'd like to see Congress set up a lending institution much like the Farm Credit Administration. Directors would be nominated by rural electric and rural telephone borrowers.

The idea is that it was perfectly proper for the Government to make low-cost loans to start REA co-ops. But, after they're started and have built up equity, they should go out in the money market and pay the going rate of interest, the same as any other business. Farm credit followed that path. And, they've been successful. In fact, as Secretary Benson points out: The farmer members and their cooperative service organizations now borrow nearly $3.5 billion annually from their own farm credit institutions. That's almost as much every year as the whole 24-year total of REA loans.

Of course, the proposed REA Bank would gradually cut down on the supply of money which rural electric co-ops are now able to get from the Government at 2 percent interest. That rate has been continued even though the Government is now forced to pay a much bigger rate to get the money which it loans.

But, the records show that many rural electric co-ops can now well afford to pay the going rate for money. One indication is the fact that the net worth of REA electric borrowers has more than doubled in the past 6 years.

Of course it would block one avenue to easy money which many rural electric co-ops are now enjoying. That's the practice of continuing to borrow Government money for 2 percent and then accumulating surpluses to invest in other securities which pay a much higher rate of interest. Rural electric co-ops already have millions invested this way. Who wants to quit when you have a good thing going for you?

But, the fact remains that the REA program has accomplished great good. Almost all the farms in America are now electrified. The big future need will be for loans to meet increasing load demands. Half the power sales of REA borrowers is now to nonfarm consumers. New nonfarm consumers now outnumber farm consumers 3 to 1. These facts make it even more difficult to justify complete dependence upon cheap Government loans as aid to farmers who can't afford to pay the cost.

The Farm Credit Administration and the Rural Electrification Administration are about the same age. Both have been in existence about a quarter of a century. During that period the Farm Credit Administration has almost completely removed itself from dependence upon Government financing. There is plenty of evidence that REA is well able to make a start in the same direction.

Secretary Benson says it well when he declares: "I consider it politically, economically and morally wrong for successful organizations like REA borrowers, with sizable reserves and increasing revenues, to keep dipping into the Federal Treasury at the taxpayers' expense to the tune of millions of dollars per year for interest payments alone." If we believe in honesty and integrity in government, we can't quarrel with this position, can we?

Poison in Your Water—No. 146

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Worcester (Mass.) Telegram of May 31, 1959, entitled "The War on Pollution."

[From the Worcester (Mass.) Telegram, May 31, 1959]

THE WAR ON POLLUTION

There are 18 miles of bathing beaches in the New York City area. And Robert Moses says that pollution has created a dangerous situation for bathers on most of them. The Moses warning has prodded the city's commissioner of public works to call for a doubling of the sewer rental charge to raise funds to fight the pollution menace. Mayor Wagner has already established a Committee on the Elimination of Sources of Marginal Pollution.

The New York City area has plenty of company when it comes to water pollution—and the problem is one of serious concern to the U.S. Public Health Service. Indeed, the Federal Government says there are 22,000 major sources of water pollution in the Nation, one-half of which are municipal sewer outlets, and one-half from private waste outlets. Streams and rivers are already so widely polluted, says this service, that they simply can no longer take the load of pollution we are putting on them.

Rear Adm. Carl F. Espe, commandant of the First Naval District, raised the question of water pollution by cities last year when

the Navy was criticized for contributing to the situation. "Don't most cities dump their sewage into the ocean?" he asked. Unfortunately, many of them do, and that includes Boston which daily releases thousands of gallons of raw sewage into the ocean from its pumping station at Columbus Point.

New York's beaches, familiar to millions, are priceless assets for health and recreational purposes. Moses has long been interested in cleaning them up, and those who enjoy the beaches are all for that. But, meanwhile, Boston, and the rest of the country, must tackle the problem boldly and soon. The fight against pollution is a nationwide one.

Nix on Dixon

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following four fine letters which have been written to the Washington Post and Times Herald by readers commenting on a vituperative column by "humorist" George Dixon—a column which launched a bitter, apparently personal attack against my colleague, the distinguished and widely respected senior Senator from Oregon, WAYNE MORSE:

[July 28, 1959]

MR. MORSE'S LIBERALISM

I like to write letters to the Washington Post about issues, not about columnists, but George Dixon's incredible attack on WAYNE MORSE ought not go unanswered.

Maybe someone should recall for Mr. Dixon a scene in the Senate last summer: It was around 4 a.m., Sunday, August 24. For days a small band of Senators, sparked by WAYNE MORSE, had been waging a lonesome battle to stop the passage of a whole raft of anti-Supreme Court bills.

The uphill fight appeared to be won until a majority of the Senate conferees caved in and accepted a bill to reverse the Supreme Court's Mallory decision (the Mallory decision prevents the use in evidence of confessions obtained while Federal officers are unlawfully delaying arraignments).

One Senator, bone tired after a full session of Congress and a week's battle fighting off the attacks on the Supreme Court, longed to be home like most everyone else. But there was one more job to be done early that Sunday morning and that was to hold the line in defense of the Court and the Mallory principle. His desk was piled high with law books and periodicals and draft speeches and he was prepared to risk his health to see that the Mallory principle should not be lost forever.

That Senator, of course, was WAYNE MORSE. No columnist should be permitted to call that kind of devotion to liberalism a "pose" or a "gimmick" without having the whistle blown on him.

Mr. Dixon owes WAYNE MORSE an apology; whether he is man enough to give it remains to be seen.

JOSEPH L. RAUH, Jr.

WASHINGTON.

[July 28, 1959]

After many years of observing and participating in the political scene, I think I've become rather thickskinned about the verbal and written give-and-take that has become the American custom. George Dixon practices the art of plain talk with usually commendable and refreshing down-to-earthness.

But his recent column about WAYNE MORSE is completely inexcusable. It violates every standard of kindness, fairness and just plain good taste that should guide anybody—not excluding political writers.

Dixon writes that "most true liberals are embarrassed to be seen talking to Morse." I'm not quite sure what a true liberal is these days, but I want to assure Dixon that I'm quite proud to be seen talking to WAYNE MORSE. We don't always agree when we talk, but it is always a stimulating and satisfying talk.

HYMAN H. BOOKBINDER,
Legislative Representative, AFL–CIO.

WASHINGTON.

[July 25, 1959]

MR. DIXON'S DIG

Having often found George Dixon's column highly amusing, I was more than shocked to read the anything-but-amusing attack on Senator WAYNE MORSE in Mr. Dixon's column of July 20. This was as intemperate and unwarranted an attack as one may ever find in a responsible newspaper. Mr. Dixon must have written it in an unrestrained heat of anger.

We who live in a democracy are often distressed by comments of responsible citizens to the effect that they would never engage in political activity and would not even think of seeking to be elected to public office. If there are readers of Mr. Dixon's column who have any leanings whatsoever in this direction, the attack on Senator MORSE would certainly discourage them completely.

Everyone in public life should properly be exposed to thorough scrutiny and should expect criticism. However, the bounds of propriety were certainly exceeded by Mr. Dixon and this kind of attack truly undermines the dignity and stature of all Senators.

As far as Senator MORSE is concerned, his record on behalf of constructive public issues needs no defense. He has certainly been a nonconformist and he has often expressed different views from those with whom he is usually in agreement. He is truly an individualist.

As one who has known Senator MORSE well for many years, I would not try to predict his position on each specific issue but I am convinced that on all principal issues he determines his stand on the basis of principles. He is an outstanding liberal and his contribution to forward-looking and constructive legislation ever since he first appeared on the Washington scene has been truly outstanding. His policies and his determined and documented fight for sound legislation warrant our indignation over such a personal attack.

History will credit Senator MORSE for a great many outstanding achievements, whereas Mr. Dixon's column will soon be forgotten. Nonetheless, those who know Senator MORSE's record cannot allow such a column to go unanswered.

ROBERT R. NATHAN.

WASHINGTON.

[July 25, 1959]

"Fools rush in," it is said, but George Dixon has overstepped the jester's license in his vindictive and abusive attacks on Senators PROXMIRE and MORSE. When he steps into serious political affairs, he is over his depth.

The good Senators can answer for themselves. Their records in public service are their best defense. In the finest tradition of American politics, they have not hesitated to raise their voices for what they thought was right, even when they were in the lonely minority. So did George Norris and Robert LaFollette, who are now remembered with honor long after those who abused and ridiculed them are forgotten.

Senator MORSE's long battle for the public interest in Hells Canyon will be remembered along with Norris' fight for TVA. So will his many battles on behalf of civil liberties and due process, in which he has demonstrated a devotion to constitutional rights and a skill as a constitutional lawyer which—though they may escape Mr. Dixon's notice or understanding—are rarely matched in the Senate.

No one grudges Mr. Dixon his right to quiver with indignation at anyone who criticizes Senator JOHNSON, but let him then answer the criticism on its merits and not by personal abuse.

REGINALD H. ZALLES.

BETHESDA.

Housing Legislation

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. RAINS. Mr. Speaker, the President's veto of the housing bill has, among other things, dealt a most serious blow to the strenuous efforts our institutions of higher learning are making to keep our country strong in the educational field.

I should like to place into the RECORD a letter I received from Clanton W. Williams, president of the University of Houston, who is not only a close friend, but is also one of the Nation's most respected educators. President Williams has intimate knowledge of the serious situation facing our colleges and universities, and he expresses in no uncertain terms the need for providing adequate loan funds so that our colleges and universities can provide the classrooms and laboratories and the educational plant which our national security demands.

UNIVERSITY OF HOUSTON,
Houston, Tex., July 20, 1959.

Congressman ALBERT RAINS,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN RAINS: In your consideration of housing legislation I most earnestly urge that this line of thought be emphasized:

1. Colleges and universities, especially the non-tax-supported institutions, are striving now against odds to meet a tremendous social, economic, and defense responsibility.

2. If we are to double our enrollments, we must double our capacity.

3. "Capacity" is twofold:

(a) An adequately paid faculty—not one which is subsidizing the education of our youth through abnegation.

(b) Plant facilities.

4. "Plant facilities" involves simultaneously housing and teaching facilities; one without the other will not get the job done.

5. We are not asking for handouts here, but we do have a responsibility to America to ask that we not be told that hard-pressed schools must pay high interest to those who are able to lend. The very least that Uncle Sam can now do is to make available to us at cost to the Government moneys which in turn we will immediately inject into the GNP while moving otherwise to strengthen every facet of American life.

Most sincerely yours,

CLANTON W. WILLIAMS,
President.

Banks, Interest Rates, the Public Interest

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. FLYNN. Mr. Speaker, in 1929 a depression that lasted 12 years started in this country. It affected the life and well-being of every American citizen. Whether bankers, stock manipulators or others would admit it or not, Federal Reserve Bank operations and the contraction of credit had much to do with the cause of that depression. These banks were free; they were independent of government control—yet 4 years after the start of the depression, many of them lay prostrate, victims of the depression for which their own policies were to a great extent responsible. A bank holiday was declared and although they were free of government control, they were not opposed to accepting government help in order to continue in business. Congress hurriedly passed special laws to aid the banks. The Federal Deposit Insurance Corporation was organized in order to create confidence in the public in our banking institution and in order to protect depositors' money in the future. Many banks, even with this help, were forced out of business or operated under receivorships for a long period of time. In many cases depositors lost money.

The Chairman of the Federal Reserve Bank today is pursuing the same policies, with some variation, that led up to the 1929 depression. In the June 15 issue of U.S. News & World Report, Chairman Martin, of the Federal Reserve Board, told the world that he was going to tighten the supply of money and make everyone, the U.S. Government included, compete on the money market for an insufficient supply of money. He is going to let the interst rate go up and up and up, and if as he says, this means unemployment—another word for depression—he will accept the unemployment. If it means business failures or as stated failure to the least economic businessmen, that is a result he will accept. This is another way of stating that if the small businessmen of the nation are forced into bankruptcy, that is a result he will accept. The Chairman of the Federal Reserve Bank and its Board are not responsible to the will of Congress, and Congress, without the passage of legislation amending the Federal Reserve Act cannot impose its will on the policies of the Federal Reserve Board. The Bank is jealous of its independence of Congress and has made this crystal clear in many ways.

The President of the United States appears to be in favor of the policies of Chairman Martin and the directors of the Federal Reserve bank and has joined the Federal Reserve bank in asking that the interest rate on long-term bonds be increased. The existing increase is already costing the taxpayers in added interest, $6 billion a year. This amount will, in all probability, be doubled if the interest rate is removed from the Federal long-term debt. Do you want this to happen? Do we represent them and are we thinking of the people back home, or do we represent those who would give in to the demands of the Federal Reserve bank?

Is it inflationary to increase the interest rate on the public debt? I believe it is the most inflationary thing that this country could do. It will carry along a corresponding interest increase on the private debt. The private interest increase is already $13 billion, meaning that on the public and private debt $19 billion additional dollars annually is being paid, over what was paid before the interest rise commenced.

Are we, as Members of Congress, going to represent the interests of the people back home or are we going to represent the interests of the bankers and moneylenders in voting for an interest increase?

Health and Hospitalization Program for Federal Employees

EXTENSION OF REMARKS
OF
HON. RALPH J. RIVERS
OF ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. RIVERS of Alaska. Mr. Speaker, the health and hospitalization program for Federal employees now under consideration by the House Committee on Post Office and Civil Service is particularly significant to the people of my State of Alaska. I commend S. 2162, the so-called Neuberger bill, which recently passed the Senate by an overwhelming majority, and its House counterparts introduced by members of this body.

The fact that S. 2162 and related bills have the support of the American Medical Association, the American Hospital Association, the insurance industry, Blue Cross and Blue Shield, group practice plans, and the various Federal employee unions certainly speaks for the quality of the bill. In fact, it might be said that this bill is well worth the many years it has taken to produce it.

As I view the bill, it is a most significant piece of legislation. If enacted, Federal employees would at long last achieve the status already enjoyed by about 100 million employees of private industry who are now covered by various prepaid health insurance plans. In short, it will mean that about 2½ million American citizens, plus members of their families, will be able to have low cost effective medical insurance.

Alaska, because of its former territorial status, has long had more than the usual proportional number of Federal employees, most of whom will remain in the expanding Federal programs to be carried on in our rapidly growing new State. These people have been good for Alaska. They helped it grow in stature to the point that statehood became a reality. I am particularly glad that these fine Alaskans and their families—be they employees of the executive, judicial, or legislative branches—would be afforded the opportunity of partaking in any one of the three low-cost plans which this legislation provides.

Cardinal Cushing's Statement on Lord's Day Observance

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a thought-provoking statement by His Eminence Richard Cardinal Cushing, Archbishop of Boston, which appeared in the Pilot, Boston, Mass., on January 17, 1959:

BUSINESS UNUSUAL: CARDINAL'S STATEMENT ON LORD'S DAY OBSERVANCE

(By Richard Cardinal Cushing, archbishop of Boston)

In recent months we have become aware of a concerted effort to create the impression that business as usual on Sunday should be a permanent policy in our social life. I need not remind you that such a policy is contrary to the spirit of the church's legislation for the sanctity of the Lord's Day. It would also have a harmful effect upon a longstanding custom, which has provided for the great majority, a day of wholesome relaxation and respite from the ordinary burdens of their lives. Sunday has been traditionally a day of rest, as well as a day of religious observance. If it becomes just another civil holiday, it will lose not only its religious character, so essential for the sustaining of our spiritual life, but also the sacred associations within which we have safeguarded our bodily strength against the exhausting demands of continued labor.

We have little hope of our being able to keep Sunday sacred by legislative measures. Existing laws requiring the observance of Sunday have fallen more and more into disuse and are often disdainfully referred to as blue laws. What is really needed to reverse the tendency to profane the Lord's Day is not legislation but rather a change in the attitude of those who believe in what the Lord's Day represents.

It is on this front that we must attack the problem. For this reason I am appealing to our Catholic people to bring their thinking about Sunday into closer conformity with their religious beliefs. I fear that many of us may have to make considerable effort in this direction. For large numbers the observance of Sunday has been limited to finding the nearest church in which mass may be heard in the shortest possible period of time. More of us than we like to admit are not averse to missing mass for the slightest reason, or for no reason at all.

Let us think of Sunday not merely as a day on which we must hear Mass, but as a day which we must keep sacred in it entirety to honor the Lord. Let us not think of Sunday as destined primarily for our own enjoyment and only incidentally for the worship of God.

We are not advocating a return to the former practice of forbidding on Sunday every form of nonreligious activity, even those which would be thoroughly compatible

with our religious duties; I am urging merely that we all work together to curb the growing tendency to profane Sunday by unnecessary commercial activity. Let us buy on Sunday only what we actually need; let us confine all other purchases to the remainder of the week. If we all follow this simple rule, we shall have gone a long way toward restoring Sunday to its rightful function as a humanizing and sanctifying influence in our lives. There will be no business as usual on Sunday if there are none who are willing to do business on Sunday.

This is the best answer to the problem. Let us all adopt it, in conscientious deference to the precepts of our blessed Lord and of His holy church. Sunday is the Lord's Day.

Red China Prospers?

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 8, 1959

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following extremely interesting editorial comment in the Capitol Journal, Salem, Oreg., by Mr. George Putnam, the outstanding dean of Oregon editors, on the situation prevailing in Red China:

RED CHINA PROSPERS?

The official Peiping radio has announced that 37 major cities in China would begin growing their own food to overcome food shortage, which seems to conflict with their previous claims of phenomenal increases of food supply as the result of the success of the communes system which enslaved all peasants and their families and completely destroyed the ancient Chinese way of life.

The decision to make city residents into farmers was reached at a Communist Party conference held June 17–23 in Shanghai, presided over by Deputy Premier Li Hsiennien, attended by 165 leading party officials, representing the cities involved. Li is the leading economic expert of the Red regime.

The conference decided that urban centers in China would henceforth begin "a fundamental and long-range policy of raising food for their own consumption." The program has been made possible by the cities' recent annexations of huge sections of surrounding countryside.

The Peiping radio did not go into details, but said the program "encourages peoples' communes on the outskirts of cities, government organizations, army units, schools, and ordinary city dwellers to engage in such production." According to reports, many of the business leaders long since were sent to labor in the communes.

At the Shanghai conference, the urban food growing plan followed recent reports of food shortages in China, attributed to floods and other natural catastrophes as well as increased food demands by peoples' communes.

The implication is that the communes either could not or would not sacrifice production for the millions in the cities. It indicated that either food shortage and production demands made on the communes system had brought them near the breaking point or that Red leaders had recognized that communes could not carry the burden of the heavy industrial program without new sources of food production.

Establishment of the communes created bottlenecks in distribution that demoralized business in the cities, but the Chinese people are getting what they seemingly wanted and if anarchy follows terrorism, they can only blame themselves.

To paraphrase Bret Harte,, "For ways that are dark, and for tricks that are vain, the Marxian Chinese is peculiar."

Migrant Farmworkers

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. DENT. Mr. Speaker, recently many Members of Congress received correspondence concerning migrant farmworkers.

For many years I have followed this phase of our national economy, both as an observer and as a Member of the legislative body, whose duty it was to try to pass corrective legislation.

This matter has more or less been left to the various States with the result that the National Consumers League, in calling for the passage of minimum Federal labor standards, makes the following statement:

These proposed labor standards are moderate to the point of being inadequate. They nevertheless represent an attempt to cope with the problem of the tremendous poverty and exploitation which is now the lot of American farmworkers. Therefore, these standards deserve support.

As you undoubtedly know, workers on corporate farms—and especially the migrant workers—are the most depressed and poverty stricken group in our society. Wages for them go below 40 cents an hour, child labor is common, employment is at best sporadic. A first step to help them, such as these meager standards, is therefore necessary.

Even so, we find the same profit hungry groups that are determined to undermine the overall labor standards of American workers again lining up to destroy even these low plateau standards suggested by Secretary of Labor Mitchell.

It is hardly conceivable that in this year of our Lord, 1959, we can visit agricultural areas where migrant workers live under conditions and in circumstances that would put some of our pre-Civil War slave quarters in the luxury class.

Hunger and need are no strangers in America, in spite of our high standards and high cost economy. There are still many of our people living on low and sub standards in housing, medical care, clothing and education.

The one remaining block that can be localized as a unit is the group labeled, "Migrant Farm Workers".

This move by the Secretary deserves the support of every decent and humane citizen and especially those of us entrusted with the legislative power and authority to protect the health and well-begin of our entire citizenry.

The New York Times in covering the fatal crash in Arizona lately had this to say:

The highway smashup in Arizona that took the lives of 16 migratory farmworkers from Mexico and injured 32 others, some crtically, seems an unmitigated tragedy. But perhaps it will shock the public into realization of the desperate need of better protection for migrant farmhands, foreign and native, not only in their transportation but in their living and working conditions.

The bus in which the Mexicans were riding was a medium-sized truck, with canvas sides and no windows, and its only exit, in the rear, was blocked by baggage and a water barrel. Those killed were asleep on the floor or trapped near the front of the bus. The driver had dozed off at the wheel. Evidently the most obvious requirements of safety, both as to the vehicle itself and its operation, were flouted.

Migrant farm labor is subject to three classes of regulations: by treaty, as in the Migrant Labor Agreement with Mexico embodied in U.S. Public Law 78; by Federal laws and orders of executive agencies, and by State laws and departmental rulings. Public Law 78, applying to Mexicans, and orders of the Interstate Commerce Commission, which apply generally, contain detailed minimum safety and health requirements for vehicles transporting migrant workers. Only a handful of States have such regulations, however, even though State authorities have been urged to incorporate ICC standards in intrastate transportation.

The Arizona catastrophe should spur an immediate checkup on the enforcement of these controls and stimulate their enactment by States that don't have them now. It should also encourage adoption of Secretary Mitchell's proposed revisions in the Labor Department regulations on recruitment and placement of farm workers through the Public Employment offices, designed to give these workers more adequate protection.

How many times have we passed these canvas-covered trucks—loaded with their human cargo with about as much dignity and comfort accorded to hogs on the way to the slaughterhouse.

Of course, the Secretary can do something about it if Congress and the administration want to clamp down, particularly on farms receiving farm program benefits.

I am sure that if the American people were privileged to vote on this question, the following inadequate and yet basic standards, would be adopted by an overwhelming vote:

Employers of farm labor would have to meet the following standards before being able to use the services of the U.S. Employment Service to recruit out-of-State workers.

First. Recruitment: Employers must make a reasonable effort to secure local workers before asking the U.S. Employment Service to supply workers from outside the State.

This standard would accomplish two purposes: (1) Prevent use of out-of-State workers to depress wages in any locality; (2) relieve local unemployment of farmworkers.

Second. Housing: Housing provided by employers for workers recruited through the U.S. Employment Service must meet certain standards: (a) For families—housing must conform to standards developed by the President's Committee on Migratory Labor; (b)

for single males—housing must be as good as that required for single males under the international treaty between United States and Mexico for importation of Mexican workers; (c) in States having and enforcing housing standards comparable to (a) and (b) above, proof of compliance with State standards would be acceptable.

Third. Transportation: The employer must provide transportation not less favorable than that generally provided by other employers who have successfully recruited out-of-State workers.

Fourth. Wages: Wage rates offered should not be less than the prevailing wage rate paid in the area to domestic agricultural workers similarly employed.

Sunday Change Shocks God Fearing

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article on the need for Sunday observance by His Eminence, Richard Cardinal Cushing, archbishop of Boston, which appeared in the Pilot, Boston, Mass., on June 27, 1959:

SUNDAY CHANGE SHOCKS GOD FEARING

(By Richard Cardinal Cushing, archbishop of Boston)

Some weeks ago I issued a statement on the need of a careful reappraisal of the point of view on Sunday observance which is imposed upon us by the law of God, and which has been confirmed by the existing laws of the Catholic church. The recent court decision in which State laws regulating commercial activities on Sunday have been declared unconstitutional brings this matter once more to our attention and indicates its seriousness in relation to the functioning of the church in the direction of our daily lives toward God.

I think we have all been shocked to learn that, in the minds of many modern statesmen and jurists, Sunday has lost its religious significance and has thus lost the right to protection from profanation which has up to now been afforded to it by the law. In our American tradition, Sunday has been a day of prayer and rest. In its origins, as the history of jurisprudence reveals them, the observance of Sunday has been inseparably associated with the worship of God. Sunday has not been a civic holiday. The laws whose validity is being questioned today reflect the belief of those who formulated them in a personal God and their acceptance of the age-old tradition that one day in seven should be set aside as the Lord's Day.

It is extremely disturbing, therefore, to be confronted with this new trend of thought, according to which Sunday is to become legally recognized only as a day on which people may, if they choose, seek respite from their ordinary labors, and on which they may engage in whatever activities may be pleasurable and profitable to themselves. I am not concerned directly with the purely legal aspects of the problem, which I leave to those who have professional competence. I am, however, seriously alarmed about the attitude toward Sunday which is generally prevalent today and which I am convinced is reflected in the decision of the court to which reference has been made.

I cannot conceive of any court in this Nation presenting, even 50 years ago, a decision such as the one which has become a subject of controversy. Fifty years ago the great majority of our people thought of Sunday as a day on which a visit to the church was in order, and cessation of the ordinary activities of the business world was a necessary condition for the proper fulfillment of religious duties. Even those who did not attend church were influenced by the predominantly religious observance of Sunday, and they seized the opportunity which Sunday afforded to gain greatly needed rest from their customary occupations.

A change of drastic proportions has come over our thinking, and has worked itself into our way of life. Only thus can we explain the readiness of the courts to promulgate a decision so completely at variance with the traditions of the past and so inconsistent with the purposes of the Sunday observance as they have been implied in our previous legislation.

I wonder if the majority of our people are prepared to accept the new definition of Sunday as it is proposed to them in a court decision which questions the constitutionality of our existing laws regulating the observance of Sunday? Do we want Sunday to become the kind of day that it is in Soviet Russia, where days of rest are appointed by governmental decree and religious activities are officially excluded from all programs of social planning?

It is in this direction that we are heading once we disassociate Sunday from the remnant of religious significance which it still retains among ourselves. Once we allow business as usual on Sunday, it is but a short step to the complete secularization of the day that was once known as the Lord's Day. When this point has been reached, and Sunday has become but another day of the week on which work of any kind may be done, it will become easy to argue that religion itself has become obsolete, and that the religious activities which have become so closely associated with the sanctification of Sunday should be abandoned in favor of the amusements and secularistic diversions to which Sunday is now, in point of fact, so largely devoted.

Let us react strongly to the danger before it is too late. The courts will not take Sunday away from us unless we ourselves make it possible for them to do so. We must prove that it is the wish of the great majority that the observance of Sunday, as it has become traditional in our community, be retained, and safeguarded from attack by those who would destroy religion in the name of democracy. To do this it is imperative that we bring our actual observance of Sunday back into conformity with the thinking from which our existing legislation has proceeded.

Let us not speak contemptuously of the blue laws which prohibit on Sundays many forms of activity which are inconsistent with the truly religious observance of the day which our forebears, in the spirit of faith, dedicated to God. Let us restore Sunday to its proper status as a day of prayer and rest. Let us ourselves eliminate from Sunday the unrestrained commercialism which the courts, in deference to what they interpret to be our own wishes, are attempting to legalize.

Let me remind our Catholic people that there are laws of the church relating to the sanctification of Sunday which they are bound to observe. It is not enough simply to attend Mass on Sunday. The church commands us also to avoid unnecessary servile work; and God Himself has formulated the general principles from which the church's legislation proceeds. For Catholics, Sunday is neither a day for business as usual, nor a civic holiday, to be given over in its entirety to recreation and amusement. Sunday is the Lord's Day. Only by keeping the day sacred to God can we assure for future generations the benefits which have been gained in the past through the association of prayer and rest.

Dick and Pat Nixon Are Doing All Right

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. FULTON. Mr. Speaker, Vice President RICHARD NIXON and his attractive wife, Pat, are envoys extraordinary of peace. DICK and Pat have been doing an exceptionally good job on their visit to the Soviet Union. The American people are 100 percent behind them as they search for common grounds of understanding to improve American-Soviet, and Soviet-American relations.

An editorial which appeared in the Evening Star for Monday, July 27, 1959, does a fine job of summing up the Vice President's progress so far on this difficult assignment. We are proud of the fine job Pat and DICK NIXON are doing. Under leave to extend my remarks in the RECORD, I include this editorial for my colleagues in Congress and for the American people.

DOING ALL RIGHT

It may be that between now and next Sunday, when he will leave the Soviet Union for a 2-day visit to Poland, Vice President NIXON will stub his toe in one way or another, but the possibility seems remote. At any rate, judging from the reports thus far, he has been carrying out his difficult mission with a fine mixture of personal grace, dignity, articulateness, and good-humored informality of a sort that has elicited spontaneous and hearty applause from the Russian man in the street.

In fact, despite their somewhat sharp remarks to each other at the opening of the American exhibition in Moscow, Nikita Khrushchev himself appears to have been very favorably impressed by Mr. NIXON, and he has gone out of his way—at his dacha and elsewhere—to play the role of a good and friendly host. Of course, in terms of easing international tension and improving relations between the United States and the U.S.S.R., this may mean much or little; it all depends on whether anything worthwhile results from the Premier's and Vice President's private talks on such questions as Berlin and a possible summit conference.

As to that, only time will tell. Meanwhile, Mr. NIXON—together with his wife, who has been playing an admirable role at a different level—has a full week ahead of him in the Soviet Union. Thereafter, on invitation from the Polish President, he will go to Warsaw. This is a surprise addition to his itinerary, and it may have more than a little significance in relation to Moscow's indignant complaints about our dubious and poorly timed Captive Nations Week. After all, Poland is classified as such a nation, but we are giving it a considerable amount of aid as a Communist-ruled land that has won a measure of independence from the Kremlin.

Accordingly, since his projected Polish trip thus involves delicate diplomatic shadings, and since he faces several more days of visiting and talking in the U.S.S.R., Mr. NIXON

may yet run into some difficulties. But he has been doing all right up to now, and even better than all right, and the world has reason to hope that the net effect of his efforts will be an improvement in American-Soviet relations and some progress toward a decent peace. If he succeeds in that sense, our politicians here at home, in both parties, will have quite a figure to reckon with.

She Worked in Sweatshops To Win Oregon Wage Law

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mrs. GREEN of Oregon. Mr. Speaker, the Committee on Education and Labor will soon turn to the question of the extension of the minimum-wage laws. This legislation is long overdue and badly needed. This morning there crossed my desk a copy of the Oregon Labor Press, one of the outstanding weekly newspapers of my State, and one of the finest of labor's publications. On the front page of the Labor Press for July 24 there appears an article by Mrs. Emsie Howard describing the life and work of Sister Miriam Theresa. Sister Miriam Theresa, before entering the religious life, was a leader in the struggle to enact Oregon's ground-breaking Wage and Hour Act. This legislation marked a turning point in the fight for the recognition of the principle that people cannot be treated like machines, to be worked until they wear out. The Oregon act itself was tested before the U.S. Supreme Court and figured in the basic decision of that Court which upheld the right of the States to legislate in this area.

As the Congress again begins to consider minimum-wage legislation, the stirring story of Miss Caroline J. Gleason, now Sister Miriam Theresa, is an informative and inspiring part of the historical background of this continuing fight. I ask unanimous consent that the Labor Press article be printed at the conclusion of these remarks in the Appendix of the RECORD.

SHE WORKED IN SWEATSHOPS TO WIN OREGON WAGE LAW

(By Emsie Howard)

Forty-six years ago—in 1913—Oregon became the first State to enact an enforceable wage-hour law to protect women and minors who work for a living. Oregonians are proud of this distinction. But few of them know the erect and graceful woman who, more than any other individual, was responsible for it.

Her name then was Miss Caroline J. Gleason. Her name today is Sister Miriam Theresa. She is head of the department of social sciences at Marylhurst College, on the west bank of the Willamette River near Portland.

Sister Miriam Theresa's eyes are full of wisdom and kindness. And these eyes twinkle with merriment when she recalls some of the methods she used almost half a century ago to achieve her goals of social justice for women workers.

Looking back to 1912 she says, "I never, never dreamed that I would live to see a Federal minimum wage law!"

It was in 1912 that Miss Gleason directed a survey of the wages and working conditions of women working in Oregon stores, factories, canneries, and industrial plants.

To assure the accuracy of the survey, she herself went to work in some of the worst factories. This took courage. The work was hard and dirty—and many employees considered her an enemy and a spy.

Miss Gleason was appointed to make the survey by the Oregon Consumers' League, a group of citizens struggling to bring some kind of social justice to women who were being cruelly exploited in factories and stores. She herself was a member of the league's board of directors. When the challenge came to make the pioneering survey, she did not refuse.

The completed survey was so devastating, so accurate, so appalling that the 1913 session of the legislature passed Oregon's first wage-hour law.

The law established the Industrial Welfare Commission and made it unlawful to pay women wages lower than those needed to maintain decent standards of health. It gave the commission authority to set those standards and to set a maximum workweek for women.

The first weekly minimum was set by the commission at $8.25 for a 54-hour week—slightly less than 16 cents an hour.

Sister Miriam Theresa recalls that organized labor opposed the law, fearing that it would hamper the growth of unions.

The wage-hour bill was introduced on the opening day of the 1913 legislative session. Employers descended on the legislature to lobby vigorously against this outrageous, socialistic measure.

"It will drive industry from the State * * * It will reduce the wages of men * * * It will throw women out of work because, if they are forced to pay higher wages, employers won't hire so many women." These were some of their arguments.

Hot on their heels to lobby just as vigorously, but more effectively, came Caroline Gleason.

Employers were claiming that the conditions revealed in her survey "simply do not exist."

Miss Gleason quietly replied: "If you would like the names and addresses of the firms where these conditions prevail, I shall be glad to give them to you."

Silence. No one asked for the names.

Miss Gleason had the facts. She got them the hard way. She had worked in the plants.

Her first job during the survey was in a paper box factory in Portland. Sister Miriam Theresa remembers:

"Our job was to paste labels on the ends of shoe boxes. We sat at a long table with a huge glue pot in the center. A gas jet burned under a pot to heat the glue. The resulting odors were something less than pleasant.

"After two or three labels our hands were covered with glue and had to be washed. But there was no hot water. We carried 5-gallon pails to another part of the plant where live steam was pouring from a pipe. We held our pails under the pipe until the steam had heated the water.

"You must remember that this was piecework and all these preparations took time. In 3 days I earned $1.52."

During her lunch hour Miss Gleason wandered casually through the plant to observe the appallingly unsanitary conditions and fire hazards.

This was the way the survey was made. This was how Oregon's pioneering wage-hour law was born.

Caroline Gleason was well equipped to direct the survey. A graduate of the University of Minnesota, she came to Oregon in 1908 to teach Latin and English. But her compelling interest in social conditions took her to the University of Chicago in 1910 for graduate work in social studies. This interest had been stimulated earlier by social work in Philadelphia, Baltimore, New York, and other large industrial centers.

She speaks with sincere modesty of the survey. "Compared to the scientific methods employed in similar studies today, our survey seems a very small effort," she says. "But we had the facts."

The validity of her work was proved when an employer challenged the new law in the courts. (The employer was the owner of the paper box factory where Miss Gleason took her first industrial job.)

A brilliant young lawyer named Louis Brandeis came out from the East to volunteer his services in defense of the law. Brandeis used Caroline Gleason's survey as a basis of his defense before the State supreme court. He won. The court upheld the law.

Both Louis Brandeis and the Oregon wage-hour law went on up to the U.S. Supreme Court. The Court upheld the law's constitutionality. And Brandeis later became one of the great liberal Justices of the highest court in the land.

Another notable contribution made by Miss Gleason was a housing survey in Portland. Again the Oregon Consumers League called upon her to direct the survey. She trudged on foot many miles a day to inspect the living conditions of working people. The frightful conditions disclosed in her survey resulted in a new city ordinance based on the model tenement housing law of the Housing Association of New York.

Before this survey was completed, Miss Gleason became a Roman Catholic nun. "I knew from the time I was a girl that some day I would enter the church," she said. Her conviction that education of youth was one of the best means of achieving improved social conditions was decisive. In 1916 she entered the Sisters of the Holy Names of Jesus and Mary, a teaching community.

Sister Mariam Theresa's interests are by no means limited to the classroom. Of unions she has this to say: "I certainly believe in the trade union philosophy. Without unions, the conditions of working people would be almost indescribable."

The complete background of Oregon's first minimum wage law will be available to students when Sister Mariam Theresa finishes the article she is now writing for the Oregon Historical Society.

It will be one of the proudest chapters in the history of our State.

Expensive Money

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. FLYNN. Mr. Speaker, the fiscal policies of the Republican administration are receiving increasing attention as debate on the requested increase in interest rates of Government bonds continues to receive daily attention in the newspapers, on the radio and television, and on the floor of Congress.

A report just issued by seven top American economists criticized the Government for falling short of its responsibility to guide the economic destiny of the United States. They concluded that "at the present time, the country has no adequate Federal policy to pro-

mote economic growth and stability and no meaningful anti-inflationary policy." Also the report stated:

It is a rudderless ship drifting on what is at the moment a rising tide of economic activity. Without a firm policy we will descend again in the future into a trough of economic stagnation and retrogression. We reject the notion that the government governs best which governs least.

The concern expressed by these economists is felt by every American. The following article describes how the administration's tight money policy affects the homeowner, the home buyer and the prospective new car buyer. I respectfully submit an article by Sidney Margolius in the July 20 issue of the Midland (Minn.) Cooperator at this point:

TIGHT MONEY IS HERE AGAIN—BORROWING BECOMES MORE COSTLY

(By Sidney Margolius)

Tight money is back, and you'll have to protect your family income accordingly.

"Tight money" means that there's a shortage of lending money and interest rates are rising.

But the effects of tight money are dangerous. It affects broad problems such as employment, and specific problems such as whether you can buy a new house this year or sell your old one, how much your monthly payments will be on a car you hope to buy, and what your taxes will be.

In a time of tight money, Federal, State, and local governments, boards of education and sewage and water districts all must pay a higher interest rate for the funds they borrow.

You pay that increased cost in your income and property taxes, and sales taxes. The most noticeable effect is to boost property taxes in the new communities that need to build schools to keep up with rising population.

But the most dangerous effect of tight money is on employment.

Remember the tight-money period of 1956, when the Federal Reserve Board boosted interest rates in an unsuccessful attempt to tame inflation? Then tight money forced many consumers to stop buying and businessmen to quit building. This was followed by the recession of 1957–58.

Both the administration and such large banks as First National City Bank of New York are plugging hard for higher interest rates. They want the Government to pay investors more interest on the large Government bonds they buy.

One obvious effect is to raise the Government's borrowing costs, and keep income taxes high. But increased interest rates also have a tendency to inflate all living costs.

In general, tight money benefits people who have surplus income to invest. But it forces a reduction in the living standards of people who generally need to borrow to finance the costlier equipment for living, such as houses, cars and appliances.

Here is how the new tight-money trend will affect you in the months ahead:

Home seekers are particularly affected. Mortgage interest rates are rising. Particularly, the rate on GI mortgages has been raised to 5¼ percent from 4¾ percent. This is the third increase in GI mortgages since 1953 when the rate was 4 percent.

On a 25-year mortgage, the new boost increases the payments $2.91 a month. Thus, on a $12,000 mortgage a homebuyer will pay back a total of $21,574 instead of $20,527 as under the 4¾ percent. If you take a 30-year mortgage your total repayment will be even greater.

In shopping for a mortgage, note that the new GI 5¼ percent rate is still better than the FHA rate of 5¼ percent plus one-half of 1 percent insurance premium. The FHA rate is better than a straight conventional mortgage at 5¾ percent, since you may get a small part of the one-half of 1 percent insurance premium when the mortgage is paid up. But the FHA 5¼ percent plus one-half of 1 percent rate is not as good as a conventional mortgage at 5½ percent, which still may be available to homebuyers in some areas except the Far West, Southwest, and South.

Homeowners are affected in a different way. Their present mortgages, at lower interest rates than now available, add value to their present homes.

Car buyers will feel an immediate effect from higher interest rates. The three leading independent finance companies have increased the interest rates they charge dealers to finance their inventories. Since credit costs are a major expense to an auto dealer, trade-in allowances and discounts will be shortened accordingly.

Borrowers in some cities where banks charge less than the usual 12 percent a year (1 percent a month) on personal loans, will find they have to pay higher rates this year. And while the banks will still make lots of loans, you can expect them to ask more questions about your income in comparison to your other debts, and why you want to borrow.

In general, it's best to avoid borrowing in a period of tight money except for critical needs. Credit unions will continue to hold their interest rates to present levels since they are controlled by their members.

From Here to Obscenity and the Evils on the Way

EXTENSION OF REMARKS

OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. RAINS. Every community in the country should be alerted to the traffic in obscenity which the Post Office Department says has doubled in the last 5 years. The youth of our land should be protected from this heinous practice and in order to protect them parents and teachers as well as postal officials must scrutinize advertisements and solicitations which the filth merchants peddle.

I wish to call the attention of my colleagues to an editorial which outlines the Post Office Department campaign against this evil practice. This editorial appeared in the Gadsden (Ala.) Times on July 21, 1959.

The editorial follows:

[From the Gadsden (Ala.) Times, July 21, 1959]

FROM HERE TO OBSCENITY AND THE EVILS ON THE WAY

Anything for a buck, and it doesn't matter about the harm it may cause, or the degradation of the soul.

This is the attitude of filth merchants who peddle their obscenity by mail to the youth of the Nation.

While Gadsden and Etowah County may not have been struck by the racket as heavily as other areas, the heinous practice poses a threat which we should be prepared to stamp out.

Postmaster General Arthur Summerfield says good progress has been made toward solving the problem but action on a nationwide scale will be necessary for a long time to come.

Filth racketeers, in large part, aim their garbage at children, and the traffic in obscenity has doubled in the last 5 years, Summerfield says. If American parents do not take the initiative in their own communities the evil will grow.

What can parents do? Summerfield offers an eight-point program of action. Here it is:

1. Alert parents should be on the lookout for solicitations through the mail to purchase obscene literature and photographs.

The postal service must honor the privacy of first-class mail. Therefore, the post-office can only act after evidence of the mail has been put into its hands.

Parents are urged to do two things—save all the material, including the covering envelope—put it promptly into the hands of the local postmaster either personally or by mail.

2. Parents can join other parents, local law enforcement officers, and civic groups in drawing public attention to the menace * * * forming plans to combat it locally, and mobilizing community support for their representatives in Congress considering legislation to help Post Office Department stop the mail-order obscenity racket.

3. Parents can work closely with teachers to detect obscene materials in the possession of children and to determine the origin of such material.

4. Parents and teachers should make a special effort to impress upon the community the fact that even children who are never exposed to the obscene material may be victimized by sex criminals whose minds have been debauched by it.

5. Perhaps most importantly, parents can cooperate with the schools in taking positive, long-range steps to help their children develop wholesome interests in good literature and art.

6. Through civic organizations the attention of the great majority of adult citizens can be concentrated on the menace represented by the mail order traffic in obscenity.

7. Civic groups can bring about the establishment of a decent literature committee. Such a committee can carry out informational activities such as "Clean Literature Week," maintain a survey of the extent of the illegal traffic in obscenity in the community, and can support appropriate action by the Post Office Department and local law enforcement agencies.

8. Local judges, law enforcement officers, and representatives of the police force can be invited to talk before civic groups about the problem.

The ultimate aim of all concerned, the Post Office Department believes, should be the forging of an active continuing relationship by which the community can present a united front in its determination to stamp out the purveying of mail-order obscenity to children.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Address by Hon. Karl E. Mundt, of South Dakota, Before Annual Convention, District of Columbia Department, the American Legion

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 29, 1959

Mr. SCHOEPPEL. Mr. President, the distinguished senior Senator from South Dakota [Mr. MUNDT] recently addressed the annual convention of the District of Columbia Department of the American Legion. He presented so many important and thoughtful matters on that occasion that I ask unanimous consent that his speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE AMERICAN LEGION WAY IS THE WAY OF THE UNITED STATES OF AMERICA

(Address by Senator KARL E. MUNDT, Republican, of South Dakota, before annual convention of the District of Columbia Department of the American Legion)

Mr. Commander, my fellow Americans, it is always a pleasure and a challenge to address an American Legion convention. On several occasions, I have had the privilege of addressing our own South Dakota Legion convention and about 10 years ago I had the high honor of addressing the National American Legion convention in Los Angeles.

Consequently, when your invitation reached me, I simply could not resist the temptation to accept it.

A few months ago, a friend of mine was having dinner at the Metropolitan Club here in Washington. Before dinner, he joined some friends in a few cocktails; during the dinner, he drank a few glasses of wine; after dinner, he had a couple of glasses of champagne. As a result, when he left to go home, he was slightly under par. When he got into his car he headed it the wrong way down one of our Capital City's numerous one-way streets and before going very far a motorcycle policeman waved him over to the curb and asked him that well-rehearsed question used by traffic cops across the years, "Say, where do you think you're going anyhow?" My confused friend, rolled down his window and called back, "I haven't got the slightest idea in the world but wherever I'm going I must be awfully late—everybody else seems to be coming home."

It is because the American Legion never travels any wrong-way streets or espouses any off-color causes that I am especially happy to be your speaker tonight. Frequently, over the past 20 years, I have found myself allied with the Legion in sponsoring and supporting public causes. It has been a pleasure working with you in your great program of service to disabled veterans and to the widows and orphans of America's fighting men; I have joined the Legion in its consistent crusade to keep America strong and to develop and maintain our military posture; over the years I have been encouraged and gratified by the manner in which the American Legion has fought steadfastly against communism both at home and abroad. Even when opposing Communist subversion at home was scoffed at as witch-hunting, the Legion continued to press for action against communism in this country and against the units of fellow-travelers who attracted many naive but innocent dupes to their membership rolls.

Just about 24 hours ago, as a matter of fact, on the floor of the U.S. Senate, I was leading a legislative battle to support the American Legion position that the funds of our National Education Defense Act should be protected against perversion through making them available to Communists and their agents in this country. This was a senatorial contest, I am glad to report, which we won and your support played an important part in this victory.

Tonight, I desire to talk with you about some trends and conditions in our present-day American life which I am sure represent the type of activities in which the American Legion retains a prevailing interest and in the correction of which the Legion can play a predominant part.

Two of the greatest dangers confronting the American people today are complacency toward the threats of the Communist conspiracy, and moral decay resulting from abandonment of disregard of our great religious and historical heritages.

Complacency toward communism largely results from failure to understand what communism is and what it does to people. In these days of the cold war in which we are involved in the greatest ideological struggle of all time—when the lines between freedom and oppression are clearly drawn—too many of us are being lulled to sleep on the sweet notes of a false security. It is a false security based on the belief that simply because we are right we will achieve success in this cold war.

We need only remember the events of history—present and past—to know that the dangers confronting this Nation and the free world are no less today than they were after World War II when we first discovered that in Communist Russia we did not have a worthy ally but a most formidable adversary striking out at our way of life. They were striking out to destroy those liberties which were so hard won in the days of George Washington and fought for time and again by the dedicated men of America on far-flung battlefields.

Let us understand what communism is by looking to the record—a tragic record of oppression, deceit, and corruption—oppression of the human body, deceit of the human mind, and corruption of the human heart.

How can we reconcile communism with our way of life when we recall these tragic events:

Ruthless suppression in Hungary and East Germany evidenced to the fullest in riots of only a few years ago.

The rape of Tibet of only a few months ago when the Chinese Reds stormed this center of a religious culture which they want to destroy.

The insidious workings in the Middle East in the attempt to create turmoil and further stifle any opportunity to bring democracy and opportunity to those poverty-stricken peoples of the desert lands.

The attempts to infiltrate and destroy legitimate governments in South America, or, as in the case of Cuba, using the Castro revolution as a steppingstone for their own aims of seizing power and control in the Western Hemisphere.

And to bring it close to home, who can forget—but many apparently have—the agonies of the Korean war?

Communism may be a glittering display in New York City, or a friendly smile from a traveling diplomat—but communism is also the anguish of Heart Break Ridge, the torture of the prison cells and death marches of North Korea and Red China, and the timelessness of the most savage browbeating we have ever known, the depredations of the brainwashers of Chinese communism, another type of communism given an Oriental twist.

Only by understanding communism—and this can be done by comparing our system of government to the Red brand and what each does, either for or to its people—can we rid ourselves of the disease of complacency that eats away at our fortitude and determination to remain free.

Basically, the differences in communism and democracy lie in two little words: "for" and "to." In communism, the question of the hour is what it does to the people. In our way of life, it is what democracy does "for" its people and what the people do "for" democracy. You will note I have left no alternative for communism—that is, what the people can do "for" or "to" communism. That is because there is no alternative in communism, it is a one-way street of subjugation and therefore cannot place within the people the responsibility of individualism, self-assertion, and personal enterprise.

Who of communism will stand up in the open forum to compare the Red system against the democracy of this great Nation? What can they say about religious freedom? Where do the trade unions stand in their so-called workers paradise? And does communism foster education on the precept of developing it for the greatest good of the individual and mankind? What does home life mean to the Moscow family—does it mean breaking bread around the table in prayerful thanks for the Lord's blessings, or are children greeted with silence from their parents because they know not whether their offspring will turn them in to the Secret Police?

Communism and the society which it creates serves only one purpose—the materialistic, aggressive, selfish needs of the Kremlin masters who are intent only on personal power and glory. In communism we are witnessing a reincarnation of the monarchist system in its worst form, minus the royal trappings.

To understand communism is to understand what we are fighting for and to understand why each of us must dedicate ourselves to this fight. This, of course, does not mean we are to run to the nearest Army recruiting office, but it does mean that we must be fully aware of the aims of communism and the techniques employed to undermine the welfare of this Nation and her people.

The second danger which I mentioned lies in the question of what road, we, as a nation, will take, in relation to the moral standards of our people. Too often in recent days, I have heard the comment, as no doubt you have: What has happened to the people of

America—are we becoming a bunch of chiselers who have lost our respect for everything that is decent and good?

I am not sure that I can say what has happened, but I can say this, the evidence before us is not good. I need not relate the crime statistics, nor discuss the divorce rate. These things are before us constantly in our newspapers, on the radio and over our television.

What needs to be discussed, and to be worked out by our people, is how we can turn the tide against the materialistic and restore our thinking and our actions on a sound level of moral principle before it is too late.

If the abandonment of home and family life, the rejection of responsibility in being a creative, contributing member of a free society, the abuse or disregard of church life, the casting aside of patriotism, and the tendency to forget the sacrifices of those who fought to preserve our freedoms, is continued, we will forfeit those things which we are so desperately trying to defend in the face of a conspiracy that has engulfed half the world.

These are the two problems which I think should be of serious concern to every American—what we can do to end this complacency concerning the dangers of communism, and how we can foster a resurgence of morality in both our private and public activities.

I think the motto of the American Legion, "For God and Country," contains for each of us the essential elements needed to perpetuate and enhance the concept of freedom which has served as a foundation of this Republic.

However, this is something that must be practiced as well as preached.

I think there are four areas in which Americans can develop programs of positive action to overcome the difficulties confronting us. I do not pretend that these suggestions are all-inclusive, but I do offer them as constructive steps which can be helpful and serve as greater incentive for further efforts:

1. We must be alert to fight against those things which undermine America. For example, obscene literature has become a menace to all America because of the serious effect it has on our children. We can help stamp out this racket by cooperating with those officials who are striving to put an end to the operations of these people who obviously form a lower order of humanity. What kind of an individual is it that breaches all the codes of ethics and morality by sending pornographic literature into the American home? Obscenity strikes at the moral fiber of the Nation. This is the type of thing that concerns every father and mother, and the only way we can stop the purveyors of filth and trash is for the people of America to put a stop to it. Government can go only so far. The final action must come from the public, who by refusing to cooperate with the merchants of smut through rejection and through reporting receipt of this indecent material to authorities, can stamp out this one example of the type of thing that is having such a bad influence on our young people.

2. We must preserve and protect the constitutional rights of all our people. The American people have just as much right to protect themselves from the Communist conspiracy and from the racketering activities of thugs and hoodlums who have corrupted certain labor unions as do these people who cloak themselves in the priviliges of the Constitution. This can be done at Government level through legislative action designed to protect the liberty-loving free American while at the same time putting an end to the subversive and gangster activities of those who abuse the privileges of a free society. One such step is now before the Congress—the labor reform bill. Adoption of effective labor reform legislation can put an end to the corrupt activities of those who have wrested control of unions from the rank and file workers.

3. As individuals, we must make democracy work at all levels, both in and out of government. One of the best ways I know of to make democracy work is to understand it—what it means, how it can be preserved and why it must be preserved. The day has long since passed when we could say politics is something for the other fellow to worry about. Politics concerns each and every one of us, and the only way to ensure the type of government that we want to keep is for individual citizens to learn about government and participate in its activities. This means more than just getting out the vote. It means getting out an informed vote for one thing. Too often I have heard an expression of disgust at the mention of the word "politics." There wouldn't be such an expression if each citizen made it a point to be interested in politics. The best definition I can think of in reference to politics is an old one which has been repeated many times, and perhaps is a little trite—yet I think it is most applicable. "Politics is either good or bad depending on what the public wants."

4. In fighting the evil of communism, the greatest assistance we can give is to understand how it works and what it does. Here again, the key is becoming fully informed. With the knowledge of what communism is, and with the understanding of what democracy is, we arm ourselves with the political ammunition needed to bring communism to halt, to prevent it from encompassing the entire free world. With understanding of this problem, we are better equipped to lead the moral force and public support to those programs which are so necessary to the maintenance of a free society.

No other organization is better equipped of more aptly suited to the correction of conditions which weaker America and aid and abet atheistic communism than the American Legion.

I hope all of you read in a recent issue of the American Legion Monthly the challenging article by National Commander Preston Moore dealing with these very conditions and challenges. I believe his article was entitled "The Training We Need for This New Type of War," or something very similar to that title. Commander Moore presented us with an agenda of action which should appeal to every red-blooded American. Now, as always, freedom is everybody's fight, and I urge you to continue your great record of protecting and promoting those actions and those institutions which are vital to America. Unless we succeed here the hope for freedom will fade quickly everywhere.

Our Weak-Willed Conservatives

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 29, 1959

Mr. MASON. Mr. Speaker, the conservative voter today is asking: "What's the use? A conservative candidate today hasn't a ghost of a chance of being nominated, let alone elected. Both parties are dominated by liberals, and conservatives are afraid to speak out in the face of the liberal trend today. What's the use of voting?"

The kind of defeatism expressed in the above quote is made to order for minority groups. The only way a minority group can get into positions of political power is by default. COPE achieved success in the 1958 election by default—the conservative voters did not vote.

Conservatives are still in the majority in America. They can, if they decide to do so, elect to Congress men who believe in sound money and a balanced budget; men who are against inflation and a Socialist-labor government; men who are for States rights and local responsibility for education and municipal improvements.

We must not forget that only those who put up a fight, who defend what they consider to be the best interests of the country, can hope to stop the trend toward national socialism and national bankruptcy. That is the duty of the conservative citizen as well as the conservative officeholder. Defeatism has no place in today's battle for a sound dollar and a safe and sane government.

In this connection, Mr. Speaker, I am including as a part of my remarks an editorial from the August 1, 1959, issue of the Saturday Evening Post entitled "Conservative Candidates Can't Win by Aping the Liberals":

CONSERVATIVE CANDIDATES CAN'T WIN BY APING THE LIBERALS

(By John Chamberlain)

Conservatives in this country have been losing votes because they themselves have been building up a false image of the power of a few labor bosses.

According to the cliche which the conservatives have been so industriously circulating, labor is unbeatable at getting out the vote. Not only does it have its own money—collected by the AFL–CIO's Committee on Political Education, or COPE—but it also can claim credit for the welfare funds distributed by the Federal Government.

Because of the power of this cliche, Republicans as well as Democrats have fallen over backward to show a high score on the CIO's list of what constitutes a good voting record in Congress.

The cliche, however, is hardly in accord with the election-day facts which Mr. Rogers C. Dunn, of the Dunn Survey of Washington, D.C., has been busy collecting and reducing to a few telling graphs and generalizations. Recently Mr. Dunn went into the State of Delaware. What he discovered there was in accordance with what he had discovered in labor centers such as Pittsburgh and New York City: The power of the labor leader to roll up big majorities by superior footwork at the polls is largely illusory.

In his Delaware survey Mr. Dunn has collected election figures for the entire State, for the metropolis of Wilmington, and for the various counties, going back to 1936. His statistics on the fates of Republican candidates for Congressman—Delaware has only one Representative—and Senator are extremely suggestive.

A conservative Republican, J. Caleb Boggs, was elected Congressman in 1946, in 1948, and again in 1950. Later Boggs was elected Governor. Governor Boggs did all this without benefit of labor support. In 1947 he voted for the Taft-Hartly Act. In the 81st Congress Boggs scored 91 percent wrong on the CIO–PAC list.

In 1958 a liberal Republican, Harry Haskell, Jr., who had made a record in the House of Representatives that was 58 percent acceptable to labor's political committee, lost in his campaign for reelection. On the other hand, the conservative Republican, Senator

JOHN WILLIAMS, who had a CIO-PAC score that was 100 percent wrong, won his reelection by a majority of more than 10,000.

The Delaware facts, then, would seem to show that when Republicans run a "me too" candidate they lose because their potential supporters stay at home. The labor-Democratic vote, increasing slowly with the growth of population, is sufficient to gain the day any time the conservative forces lack a candidate whom conservatives approve.

The inference is that it isn't the labor bosses who have been doing the job. It is Republican failure to provide a fighting opposition. In Delaware, a representative State, the Republicans have done well whenever they have stuck to candidates who have a true Republican flavor.

Address by the Korean Ambassador to the Girls Nation of the American Legion Auxiliary

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, July 29, 1959

Mr. WILEY. Mr. President, last evening it was my privilege to hear an address by Dr. You Chan Yang, Korean Ambassador to the United States. He spoke before the Girls Nation of the American Legion Auxiliary.

Dr. Yang is highly esteemed in this country. His address was an excellent one, and afterward I was very happy to be able to tell him so.

I ask unanimous consent that a copy of his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF ADDRESS GIVEN BY DR. YOU CHAN YANG, KOREAN AMBASSADOR TO THE UNITED STATES, BEFORE GIRLS NATION OF THE AMERICAN LEGION AUXILIARY ON JULY 28, 1959, AT THE AMERICAN UNIVERSITY

Director Glynn, Miss President, Miss Vice President, and young ladies of Girls Nation, for the third consecutive year, you have pleased and honored my country and me by inviting me to be your guest and inaugural speaker. Again I am delighted to be able to congratulate, in person, your newly elected president and vice president and to congratulate each and every one of you for the splendid accomplishment of learning the democratic processes better.

I suspect that this year, as in previous years, I, too, shall learn from you. The last time I spoke at Girls Nation, I was struggling with the meanings of the teen-age vocabulary of 1958. Now will you help me "dig" the new 1959 vocabulary? I don't want to be accused of having "smog in the noggin" and I don't want to "bug you." Is this "kookie"?

But probably with your help even I could never understand another 1959 phenomenon—the rise of the "beatniks." Now it is one thing to be modern and sophisticated and quite another to practice fruitlessly the ritual of revolt, as do the beatniks. For them, there is no tomorrow. They do not see the shadow of the mushroom cloud and the threat of mass extinction. They disdain completely all of the institutions of civilized society in a neo-Bohemianism. They simply refuse to shoulder any of the normal responsibilities of human beings. I am sure that none of you will ever be beatniks; you are too concerned with the fate and future of America and the free world.

Just as I am disturbed, like all fathers in America, about the beatniks here, I am disturbed as a diplomat about those international beatniks, the Communist warlords. They, too, shun international responsibilities, scorn the institutions of marriage, home and the rearing of children, and behave in an undisciplined and barbaric way.

Also, because of its seeming unorthodoxy and its obvious peculiarities, the Communist, like the beatnik, frequently fascinates the naive. I am concerned about the Communist appeals to the young people of this country as well as in other parts of the world. I don't consider myself a "witchhunter," but a grave menace does exist, in my opinion, in the constant overtures made to American youth by the slick and sick international beatniks.

According to one American news weekly, going to Moscow this summer is quite the fad. Almost everyone, it seems, who is anyone in New York is going to Russia—fashion models, students, writers, businessmen, daughters of prosperous businessmen. The magazine estimates that around 15,000 to 20,000 Americans will be piercing the Iron Curtain. What a strange fashion of the times.

Some are actually lauding this latest travel development, saying that it portends a warming up of the cold war and a step forward in a people-to-people rapprochement between the Soviet Union and the United States. What nonsense. Those American tourists will be seeing only what the Communists wish them to see. The Russians they contact will be either plants or dupes of their Communist masters. The answers parroted by the Russian citizens to questions by the innocent American tourists will have been predigested by the Communist propaganda apparatus. Instead, the Americans will be waylaid with provocative and misleading questions. They will be embarrassed or ignored whenever possible. They will be drawn into one-sided arguments. You will remember that last week even your great Vice President NIXON was not accorded a proper reception when he landed in Moscow, that the average Russian did not even know he and his lovely wife were visitors, and that NIXON himself was baited—without the opportunity of explaining his position broadly to the entire Russian people via radio, television, press conferences, and the newspapers. This is in stark contrast to the hospitality and freedom of speech and movement accorded to Mr. Kozlov just several days previously here in the United States. The red carpet treatment obviously has a reverse meaning in the Soviet Union.

Now, as always, the Communists are preparing an alibi of sorts for their boorish behavior. Khrushchev has taken the occasion of Vice President NIXON's visit to blast the United States because of President Eisenhower's proclamation of Captive Nations Week on July 17. Khrushchev is angrily declaring that Senate resolution and Presidential proclamation is interference in the internal affairs of the Communist bloc.

Obviously, this is just a Communist trick to obfuscate the real intent of Vice President NIXON's visit—to open the American exposition and to search for a solution personally to the deadlocked Geneva talks. It is obvious that the Communists must have to throw some kind of smokescreen up to becloud the popularity already obvious at our exposition in Moscow and your Vice President's earnest honesty. If the Communists had not been able to use the "Captive Nations Week" theme, they would have found some other excuse for intransigence. For logic or reality does not matter to them; human feelings are beside the point; and the fate of whole nations is immaterial. Any excuse would have been used by the Communists for their irresponsible and vicious behavior.

What is, actually, the Captive Nations Resolution and Week? Democratic Senator PAUL DOUGLAS and Republican Senator JACOB JAVITS jointly sponsored a resolution in the Senate emphasizing a point in American foreign policy extant since 1945: That captive nations can look forward to a time of liberation from tyranny. The resolution quickly passed both the Senate and the House of Representatives here without debate and was quickly proclaimed by President Eisenhower.

Now I, as the representative of the Korean people, have been keenly interested in this vital message. After all, our people in the northern part of Korea are held captive by the Communists. Slim hope though the resolution is, it is hope nevertheless. Further, it is to us vital proof that we have not been forgotten. Together with organizations of refugees, from other nations absorbed by force within the Soviet orbit, the Government of the Republic of Korea enthusiastically welcomed and approved the resolution and proclamation. We reason that the American pledges of liberation have not been entirely forgotten. We are reassured that the several millions of our brothers, sisters, mothers, fathers, and friends in the northern part of Korea may look forward to their eventual release from the bloody tentacles of communism.

The Communists would like to have you, and all Americans, forget about Hungary, Tibet, and Korea. They would like to toss down George Orwell's "1984" "memory hole" the historical facts of their seizure of all of Eastern Europe since 1945. They are eager to have the world forget its moral obligations, if such were ever possible. Naturally, they are upset when Americans—whose forebears largely came from captive nations—are pointedly reminded of the true state of conditions under Communist rule.

Let me direct your attention to Korea, a good case in point. When the Communists seized control of the northern part of Korea in 1945, there were approximately 10 million of our people living there; 20 million Koreans were living in the southern part. By the time of the formation of the Republic of Korea, in 1948, several million people escaped from the north and sought freedom with us in the Republic of Korea. Several more million Koreans risked their lives, relinquished all their worldly goods, and left their hometowns to escape from their Communist masters by the time of the Korean war. During that war, and since, the Communists have ruthlessly carried out a deliberate policy of genocide—the systematic destruction of a whole people—just as they have done in Tibet. In the captive area of northern Korea there now remains only 3 million souls. These 3 million are our people, our families, our relatives. Every day those of us who live in freedom in the Republic of Korea are reminded sharply of the task yet before us. We cannot be indifferent to the fate of our brethren. We cannot be deaf to their piteous pleas for liberation. Nor can you. And that is why the Communists fear so greatly the momentous reminder of the Captive Nations Week.

The Communists fear also the signs of strength and growing stability in all contiguous free world areas. The Republic of Korea is a show-room of the free world in Asia. Under the wise and courageous leadership of President Syngman Rhee, we have reconstructed a devastated nation. Our economic achievements have been of historical moment—factories rebuilt, communications restored, transportation refurbished, and schools and homes springing up everywhere. And it has all been done without the com-

mune system, without collectivization, without commissars.

With our own hard work and dedication to freedom, and with the generous aid of the United States, we have performed an economic miracle. We have halted the ever-spiraling rate of inflation and we have stabilized the price index and money supply. The standard of living has risen steadily to new heights.

Meanwhile, the Communists promise paradise, but deliver a living hell. In the northern part of Korea, under the puppet Communist masters, only baroque monuments to Red heroes have been built, only airports for deadly attack have been constructed, and only peasant communes permitted to operate. No wonder my people in the north cry out daily for rescue. Small wonder that the Republic of Korea's Government and President Syngman Rhee sometimes may seem to you to be impatient in our demands for reunification of the peninsula.

Now the comfortable thing to do is just to close your eyes and ears. You can argue that the East-West struggle is pretty much of a draw. You can repeat the geopolitical slogan of "containment." You might even say, "Well, let the Communists live their way and we will live ours." Another comforting argument these days is: "Well, as time passes the Communists and our systems will gradually meld together into some kind of a socialist society anyway." You can pin your hopes upon a few straggling visitors, bemused and restricted to a tight little circle of Moscow, to generate somehow true understanding among the entire Russian people.

But such thinking and such action will not save the captive peoples and will certainly sentence you to their fate, too. Khrushchev told you bluntly: "We will bury you." While we, or at least our armchair theorists, seek excuses for Communist behavior and look for easy ways of agreement, the Communists simply say: "We will bury you."

Whether it is your wish or not, one side is going to win the other destroyed. The struggle is not of the making of the free world; the Communists have chosen the battle, determined to end it in their own perverse and final way.

The great historian Toynbee once warned: "Where the frontier between civilization stands still, time always works in the barbarians' favor." It is up to us to make sure that the frontier of the free world does not stand still. You can help tremendously by joining hands in the liberation of captive nations. You can help expose the blandishments of the Communists for the false hopes they are. You can stimulate public opinion in your own communities so that it isn't lulled into a slumber of false security with phrases like "containment," "coexistence," "building bridges of friendship with trade," etc.

You are the cream of the crop of this Nation's teen-age girls. You are bright, hardworking, dedicated young ladies. I salute you. I ask you to join the crusade of millions of youth everywhere, including those of the Republic of Korea, to crush the menace of the Communists, the international beatniks of 1959. Remember, they are no laughing matter. Their gang motto is: "We will bury you."

Let us live instead. Let us be strong and wise. Let us fight to win. Let us be frontiersmen, determined to push back the borders of darkness and anarchy. Let us build a better and stronger America and a freer world.

I thank you.

Belated Honor for a Medical Hero

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, "Belated Honor for a Medical Hero, Dr. R. P. Ames," which appeared in the Dixie magazine section of the New Orleans Times-Picayune, Sunday, July 26, 1959:

BELATED HONOR FOR A MEDICAL HERO

Burning with yellow fever, Dr. Roger Post Ames of New Orleans lay in the General Hospital outside Havana, Cuba. Suddenly his assistant rushed into the room.

"Doctor, one of the volunteers is very sick with the fever," gasped Pvt. Gust E. Lambert of the U.S. Army Hospital Corps. "Could you come see him?"

"That's the most absurd request I ever heard," the doctor's nurse said. "Dr. Ames is a very sick man. Private Lambert, leave the room at once."

As one would a mosquito, Dr. Ames waved the nurse away. "Lambert, get another man and carry me down there in my bed."

Following his superior's orders, Lambert and a companion carried the sick doctor three city blocks to the patient.

"The post surgeon," primly said the nurse later, "was not at all pleased."

But the doctor did pull the patient through and gradually he, too, recovered from the disease, contracted while treating yellow fever patients.

Wednesday in Washington, D.C., the physician's widow, Mrs. Jessie Daniel Ames of Washington, D.C., is scheduled to receive from Secretary of the Treasury Robert B. Anderson a gold medal commemorating her husband's selfless work.

Dr. Ames died in 1914. The posthumous presentation of the medal was made possible by the recently passed House bill 7544, sponsored by Representative HALE BOGGS, of Louisiana. The bill includes Dr. Ames in the roll of honor of the men who conquered yellow fever.

The New Orleans physician went to Cuba after the end of the Spanish-American War with a team of physicians under Maj. Walter Reed. A graduate of Tulane medical school, he had served at Charity Hospital and was later visiting physician at Charity and Touro Infirmary. He had fought yellow fever in New Orleans. In Cuba this unassuming young man, who seemed embarrassed by his designation as a "yellow fever expert," was put in charge of an experimental camp, later named Camp Lazear, near Columbia Barracks outside Havana.

During the war Spanish bullets killed far fewer Americans than disease—290 against 2,565. Of all diseases, yellow fever was the most deadly.

Dr. Ames was in complete command from the time the experimental camp was established in July 1900 until it was disbanded March 1, 1901. To him is due much of the credit for the success of the experiment.

Years later, in 1929, Congress officially recognized the work done by Major Reed and his associates. A total of 22 persons was chosen for a roll of honor. Dr. Ames was not on the list. In 1956, Gust E. Lambert of Hazelcrest, Ill., "Ames' man Friday," was added to the roll. Lambert and the family of Dr. Ames worked for almost 30 years to have the doctor given the recognition other yellow fever workers had won.

At the beginning of the 20th century very little was known about yellow fever or how it was transmitted. Dr. Ames, however, was convinced it was not contagious and believed correctly it was transmitted by a mosquito. Says Brig. Gen. Albert E. Truby, a member of the medical group. "He was constantly playing practical jokes on members of our staff, jokes aimed at driving away any fear about the contagiousness of yellow fever."

When Dr. Ames arrived in Cuba men were still dying by the scores every day. Clerks burned sulfur candles on their desks as they worked.

When a man died of yellow fever, his home was often burned to the ground to destroy the presumably infected furniture, clothing, and other personal effects. As the deaths multiplied, this became a rather expensive proposition. And it didn't do any good.

To test whether the disease was contagious or was transmitted by a mosquito, two sets of volunteers were put in specially constructed buildings. One was the "Infected Clothing and Bedding Building." In this, volunteers slept on pillows and sheets soaked with blood and vomitus of yellow fever victims.

The other building was divided in two by a screen. On one side lived volunteers completely free of mosquitoes. On the other side, soldier John J. Moran exposed his body to the bites of 15 infected mosquitoes.

When none of the volunteers in the infected building or in the mosquito-free section of the second building developed yellow fever and when Moran promptly came down with the disease, the doctors knew for a fact yellow fever was not contagious, that it was transmitted by a mosquito. They proved this with many similar experiments.

Such was the soldiers' fear of the disease and its swift, ghastly death that the experiments probably would have been stopped if just a few volunteers had died. But not one of the nearly 70 volunteers succumbed.

In the course of his work, Dr. Jesse W. Lazear, of Baltimore, Md., acting assistant surgeon and third member of the yellow fever board, was hit by the disease. But he did not report his sickness until it was too late and died September 25, 1900, a martyr to medical science. The experimental camp was named for him.

Its problem solved after just 8 months' work, the board disbanded Camp Lazear. With precise knowledge the authorities were able to clear Havana of its old scourge in 3 months and to begin eliminating it from other parts of the world.

Failure of the Mandatory Farm Price Support and Production Control Program

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, July 23, 1959

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent address delivered by Mr. Don Paarlberg,

of the White House staff, on the subject of agriculture.

I have been advised by the Public Printer that the address is estimated to make approximately 2¼ pages of the CONGRESSIONAL RECORD at a cost of $182.25. Notwithstanding this cost, I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE DON PAARLBERG ON THE OCCASION OF A BANQUET SPONSORED BY THE NEW YORK STATE COLLEGE OF AGRICULTURE, THE GRADUATE SCHOOL OF BUSINESS AND PUBLIC ADMINISTRATION, AND THE NATIONAL ASSOCIATION OF FOOD CHAINS, ITHACA, N.Y., WEDNESDAY EVENING, APRIL 29, 1959

In this speech I intend to make three points:

1. The mandatory farm price support and production control program is a demonstrated failure.

2. This failure is to be attributed primarily to outmoded legislation, not administrative shortcomings.

3. The remedy lies in corrective legislation along lines recommended by President Eisenhower and Secretary Benson.

I

The failure of the mandatory farm price support program, after 25 years of trial, is now clear to anyone who is willing to examine the record.

I am not speaking of price supports at moderate levels such as are in use for soybeans and some other crops. Nor am I speaking of marketing agreements and orders as for milk and certain specialty crops. Nor am I referring to the purchase of surplus crops and their diversion to the school lunch program and to needy persons. Properly administered, all of these have proved helpful. Certainly I am not speaking of the worthwhile programs related to research, education, credit, and the conservation of our soil, water, and timber resources.

What I am speaking of is the mandatory system which requires price support for a few favored commodities at artificially high prices, and couples that support with a half-hearted and ineffective production control effort. This is the system which has failed. The failure has perhaps been most clear with respect to wheat, cotton, and corn, and less so with respect to other crops.

This program came into being during the disastrous days of the great depression, when drastic action was called for. The error lies in that a depression-oriented program was carried forward with relatively few changes first into a time of war, then into a time of postwar prosperity, and now into a time of technological revolution.

To charge the program with failure is a serious matter. I shall cite evidence in support of this judgment.

1. Farmers who grow the regulated crops have lost markets

Cotton has been the subject of more solicitude in the way of price support and acreage control than practically any other crop. What has been the result?

During the 5 years, 1925–28, before the program began, the United States produced 56 percent of the world's cotton. During the last 5 years, this percentage fell to 31. From 1925–29 to 1954–58, production in the United States fell 16 percent. In the countries outside the United States production more than doubled. Instead of exporting cotton we exported the right and the opportunity to produce it. And we gave encouragement to man-made fibers at home and abroad.

Wheat is another crop which has been the subject of much regulation and support. During this same span of years, the United States' share of world wheat production fell while surplus stocks accumulated.

Formerly the largest tobacco market in the world was at Wilson, N.C. Today it is in Northern Rhodesia, in Africa.

It is easy to demonstrate that for a given year, other things equal, a short crop of cotton or of wheat will bring a higher income than a large crop. This is the basic idea underlying production control. The important fact, however, and the fact often overlooked, is that other things do not remain equal. Other suppliers come forward and substitutes are offered. Thus, while we pursue our shortrun self-interest, in the long run we do ourselves grave injury.

While supported and controlled crops have steadily lost markets and fallen behind as income earners, that segment of agriculture which has avoided control has continued to expand and win new markets.

Livestock production is not controlled. Livestock producers not only were able to find markets for the natural growth of their industry, but managed as well to market the production from the acres taken out of wheat and cotton. From 1925–29 to 1954–58, per capita consumption of beef, pork and poultry combined rose 25 percent.

During a quarter century of support and control, the share of our farm income earned by cotton fell from 12 to 7 percent. Meantime, the share of farm income earned by uncontrolled hogs, cattle, poultry, and eggs increased from 34 to 39 percent.

2. Most of the dollars are spent in support the production of a few large producers of a few crops

The favored basic crops have been singled out from some 250 farm commodities for special treatment. Though these six crops bring in only a little over 20 percent of farm income, they account for 85 percent of the Federal inventory of price-supported commodities.

Contrary to popular opinion, most of agriculture is free of controls and most farm products are sold in competitive, unsupported markets.

Also contrary to popular opinion, the price-support program affects primarily the large rather than the small farmers.

Nearly a million and a half farms produce wheat. Ninety percent of the expenditures for price support on wheat result from production on about half of these farms—the largest ones.

Nearly a million farms produce cotton. Seventy-five percent of the expenditures for cotton price support result from production on about one-fourth of these farms—the largest ones.

For wheat, cotton, and rice producers who have allotments of 100 acres or more, the net budgetary expenditures per farm for the present fiscal year are approximately as follows:

	Per farm
Wheat	$7,000
Cotton	10,000
Rice	10,000

A frequently quoted rationale for the price-support and acreage-control program is that it is needed to make operations profitable for the small producers. But the large producers get many more Governemnt dollars than the small producers, giving them an added competitive advantage.

3. Surplus stocks continue to grow

Mandatory price supports are at a level which stimulates production and chokes off markets. The control program fails to check the rising surplus.

Despite acreage allotments, despite a soil bank program, and despite massive surplus disposal, Government investment in surplus farm commodities is at a record level, approximately $9 billion, and is still growing.

Just to store this vast hoard costs more than a billion dollars a year.

We already hold such huge stocks of wheat that if not one bushel of the oncoming crop were harvested, we would still have more than enough for domestic use, export sales, foreign donation and needed carryover for an entire year. And, the oncoming crop is estimated at 1,220 million bushels, the fifth largest in history.

4. The program is excessively costly

During the present fiscal year, the net budgetary outlay for programs for the stabilization of farm prices and farm incomes will be $5.4 billion. Not all of this goes to farmers, of course. Part of it goes to commercial warehouses for storage. There are charges for interest and administration, which do not go to farmers. Some unpredictable part of this outlay will be recovered through disposal operations. But, the net realized cost is certain to be large.

Not a bushel of wheat and not a bale of cotton is presently exported from the United States without a substantial subsidy.

Budgetary expenditures of the Federal Government for programs primarily for the support of farm prices and farm incomes now are the largest non-defense-related item in the Federal budget. They run well in excess of $1,000 per farm. Net farm income in 1958 was $13.1 billion. The net budgetary outlay for the support of farm prices and farm incomes, $5.4 billion, is thus equal to 40 percent of net farm income.

As has been said, not all of this money goes to farmers. Insofar as disposal operations serve foreign policy and relief needs, costs arising therefrom should not be attributed to the price-support program.

But even after making appropriate revisions of the budgetary figure, whatever they may be, the outlay attributable to the support program directly is very great. These heavy costs might be justifiable if they were temporary, if they were solving the problems of our farm people, and if they were leading to a better balance of supplies and markets. But, unfortunately, this is not true.

II

As I said at the outset, the farm price-support and production-control program may now be judged to have been a failure.

Whose failure is this?

The question is asked not in an effort to fix the blame but in order to learn where we may look for a solution.

It is not a failure of our farm people. They are stalwart, self-reliant, and resourceful. They have done an outstanding job of producing efficiently. From the standpoint of technology they have advanced more rapidly in recent years than any other major sector of the economy. They have in fact responded to the price incentive as farm people—and other people—traditionally have.

Certainly the failure cannot be laid at the door of those farmers, a majority of the total, who earn their income from unsupported livestock, poultry, fruits, and vegetables, who have steadily fought all efforts to support the prices of their commodities.

The American Farm Bureau Federation, largest by far of all farm organizations, has worked long and hard to get the Congress to relax its legislative grip on farm prices and farm production.

The failure of the farm program is not a failure of the farm people.

Nor is it a failure of Secretary Benson.

The program now in effect is not the program recommended by Secretary Benson. It is a program first enacted a quarter of a century ago, only slightly modified since that time.

In 1954 Secretary Benson asked Congress for legislative changes, and was given part of what he asked.

In 1956 the Secretary asked the Congress for the authority to make further adjustments in the level of price supports. This authority was denied. He asked that the Congress consider placing a dollar limitation on the amount of price support to any one producer. This was not done.

In 1957 the Secretary asked Congress for authority to eliminate the preferred treatment accorded to the so-called basic crops. This was not provided.

In 1958 the Secretary asked for authority to scrap the legal formula which set the stage for increased levels of price support. He was given a part of what he asked—and several harmful provisions which he did not request—for corn, cotton, and rice. Nothing important was done with respect to the other crops.

In 1959 the Secretary tried a new approach. He suggested alternative solutions. Three months have elapsed and the Congress has not even considered these alternatives.

The President has sent to the Congress four special messages on agriculture, all pointing to the necessity of reducing the price incentives which lead to the production of crops for which there is no market.

This long series of recommendations was not based on some whimsical notion of the President or the Secretary. It was based on the widest review of farm policy ever undertaken in this country. It was based on the findings of many competent research and advisory groups, among them the National Agricultural Advisory Commission, a bipartisan group of 18 men, the majority of whom are farmers.

Meantime, the Congress has given the Secretary many things for which he did not ask, legislation aggravating the problem rather than working toward a solution.

Acreage allotments have been increased, raising surplus stocks even higher.

New crops have been added to the list which must be supported.

The production-stimulating payments provided by the agricultural conservation program have consistently been forced upon the Secretary in excessive amounts.

The Secretary has been forthright in pointing out what needs to be done. He has waged an educational campaign that may yet succeed.

The Secretary has thus dealt courageously with a problem not of his making. Though dedicated to economy in Government, he has had to witness a doubling and a redoubling of the cost of programs he could not change but had to administer. Though a believer in the capability of farmers to make their own decision, he has had to impose burdensome Government controls.

The failure of the mandatory price-support and production-control program is not a failure of the farm people or of Secretary Benson; it is primarily a failure of the Congress.

In making this flat statement, I want to acknowledge the good record of the Congress as regards price-support legislation for most farm products, the commendable action with regard to surplus disposal, and the many excellent continuing services provided for our farm people. I want to acknowledge the directionally correct but insufficient steps taken by the Congress in years past to reduce price-support levels. The onrush of farm technology has been so rapid as to swallow up the effect of these modest downward adjustments.

The truth is that the pace of the scientific revolution in agriculture has been more rapid than either the executive or the legislative branch anticipated. Both should feel regret for having underestimated the bounty of nature and the sharp advance in technology.

The chief failure of which I speak is the present inactivity in Congres in the face of irrefutable and widespread evidence that the mandatory support program has been weighed in the balance and found wanting.

Those Members of the Congress who make the strategy decisions apparently have decided that any real solution to the price-support problem will be most difficult, quite lacking in political dividends. Rather than face up to this problem, they foster the illusion that the failure of the farm program is attributable to Secretary Benson. They count on the difficulty which the public has in distinguishing between legislative and administrative responsibility. They hope to turn public dissatisfaction regarding the farm program toward Secretary Benson, who must administer it, rather than toward the Congress which authored it.

The farm program now being offered by the Congress is a one-point program: "Belabor Benson."

Secretary Benson has taken an oath to administer the laws enacted by the Congress, and this he is doing to the best of his very considerable ability. That certain of these laws are a failure is no fault of his. But, if he can be made the scapegoat, this has, in the eyes of some, the twin merit of safely explaining the failure and postponing the difficulties involved in its solution.

Meantime, while the Congress delays, surpluses mount, costs rise, markets disappear, and dislocations increase.

Agriculture's public relations deteriorate as costs and surpluses rise. The goodwill of the public, one of the most important assets which our farm people enjoy, is steadily being drawn down. As the farm population becomes a smaller percentage of the total, the need for good public relations steadily increases.

III

What is the solution?

The solution is to be found in legislative changes which provide, for the commodities receiving mandatory price support, treatment similar to that provided for all other farm products, most of which are in reasonably good economic position.

The solution is to be found in returning to our farm people a larger role in deciding what they shall plant and how they shall market their crops.

The solution lies in programs which build markets, not destroy them, which channel farm products into use, not into storage. A warehouse is not a market and a storage bin is not a customer.

On the basis of the record, strict production controls are not the answer. The evidence of 25 years is that the Congress will not enact, the Secretary cannot administer, and the farm people will not accept the kind of production controls needed to balance supply and demand at the price objectives specified in present law.

If farm products are to be abundant, they cannot be priced as if they were scarce.

It would be well to deal with this problem legislatively now. It would be well to make now the reasoned and gradual changes which are the product of rational thinking, rather than to wait and invite the abrupt and painful dislocations which could come when and if the public patience is finally exhausted.

Back in 1950, the public suddenly lost its patience with potato price support and Congress outlawed the entire program. Potato producers, who are relatively few in number, went through a difficult readjustment. To subject millions of wheat and corn and cottongrowers to this abrupt kind of adjustment would be a grave matter indeed. It would be better not to test the public patience to the breaking point.

The President outlined a course of action and called attention to the urgency of this matter in a special message 3 months ago. The Secretary of Agriculture followed up with various alternative recommendations within the framework of the President's statement.

The solution need not be precisely the one the administration has recommended. But it must acknowledge the fact that we should no longer, through incentive prices, encourage the production of crops for which there is no market.

If nothing is done, we shall soon be committed for another crop year to the program which causes so much difficulty.

This is a wealthy country. If it were not, changes would have been forced long ago in the farm price support program.

But even a wealthy country cannot continue to waste its substance in the endless accumulation of surplus stocks, particularly when it needs its resources in a struggle for economic leadership with the countries of the Soviet bloc.

Some people have come to say that there is no solution for the farm price-support program. A better statement would be that there is no easy solution. A 25-year hunt for an easy solution has produced only new disappointments.

Even if needful changes are made now, surplus stocks would continue and costs would remain very high for a long time. Commodities which have been sheltered for 25 years cannot quickly be returned to the rough-and-tumble of the market place. Our farmers cannot quickly crawl out from under a $9 billion stockpile. The return to a more orderly program must be a gradual process. We have started in that direction. The movement must not stall.

Correction of our price-support legislation is retarded by folklore and fairytales. One of these is the idea that the administration wants to do away with price supports. There is no intention to take away from farmers the right to legislation which protects them from the excesses of unfettered competition. These rights have been fought for and won, and I applaud the victory. The thing I am saying is that these hard-won rights should not be squandered in the continuation of a self-defeating program.

Another block to constructive action is the erroneous idea that as prices fall farmers will increase production in order to maintain income. This notion is refuted by all objective research. It is refuted by the Congress itself, which as recently as 1958 extended the Wool Act, based on the correct principle that production increases result from high prices, not low prices.

Still another obstacle is the attempted justification of the present program on the basis that other groups are subsidized and other groups have price protection. The question is not whether farmers, like other groups, have a right to helpful legislation; they do. The question is whether the legislation in question is truly helpful. On the basis of the record the answer must be "No."

The time will come when the penalties for temporizing further with this grave problem will be greater than the problems involved in dealing with it directly. And that time may be sooner than some people think.

The People Want the Farm Mess Solved

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1959

Mr. HOSMER. Mr. Speaker, people keep writing from all over the country

in favor of my four-point program to end the farm mess. It involves stopping subsidies, selling off surpluses, and using proceeds to reduce the debt and taxes. Here are some more extracts from letters asking that this course of action be taken:

The present farm mess from the very beginning was the most nonsensical idea ever to be conceived by any one or any administration. If a farmer cannot live without Government aid, how can anyone else live without it? He can always raise enough to eat at any time. Not so the ordinary laboring man, or mechanic. They have nothing to fall back on but their ability or tools.

Please end that farm mess now. I have always been against it. It is so ridiculous to pay the farmers big sums of money, for not working.

With regard to the farm mess, I wholeheartedly agree with your program in principle.

I agree with you on the farm mess, it's terrible, wasting a billion a year for storage.

We agree with you 100 percent on the farm mess. Think it is time for the Government to quit paying people to not work.

Re your program to end the farm mess—I am 100 percent behind you—there is no excuse at this time for subsidy to any business and the quick sale of surplus wheat stocks is most wise and economical.

I fully agree with you on the farm mess. I hope the time will soon come when the Federal Government will stop farm subsidies as well as all other subsidies. The sooner we return to the free-enterprise system the sooner taxes and unfair expenditure of public money will stop.

I feel that something should be done to end the farm mess. The payment of subsidies only encourages more production which in turn increases the subsidies to be paid. The fact that surpluses have increased to such gigantic proportions illustrates the folly of trying to insulate a selected group of people against the painful readjustments necessitated by progress, in this case, progress in methods of farm production. Somewhere a real start has to be made to solve the problem, not just to appease it and pass it on to the next session of Congress. I believe the program you have outlined will do this.

I hope you can really see this farm-support mess as you say and every opportunity that is given you will try to vote these subsidies to cease. This, in my opinion, is one of the saddest things in U.S. home government that I have seen. It sums up, we pay a subsidy so that we can pay higher prices. Isn't there some way that these vote-crazy legislators can see beyond their noses and quit such stupid voting?

I am very much in favor of your stand on the farm program.

I wish to congratulate you on your proposed solution to the farm mess. I hope that enough support will be forthcoming to bring about enactment into law.

I certainly appreciate your concerns regarding the present farm program and concur with your proposals to eliminate this fantastic tax burden.

I think your solution to the farm mess is a dandy—let's do it.

I am certainly glad to hear something is going to be done about this farm mess. Surely there must be a better way to spend billions and help the farmers too.

Farm mess—$1 billion to store $9 billion in surpluses, need more be added?

Forest Products Industry in Oregon

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 29, 1959

Mr. NEUBERGER. Mr. President, processing of timber into lumber and a multitude of other forest products is the leading industry in the State of Oregon. The need to preserve and maintain our State's basic forest resource is recognized by both private and public owners of forest areas in our State. A thoughtful column by Mr. Dewey Rand, editor and publisher of the Salem (Oreg.) Capital Press, comments upon the now-prevalent attitude in the lumber industry, which favors sustained-yield cutting practices and sound forest management policies. I ask unanimous consent to include Mr. Rand's column in the Appendix of the RECORD along with my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Salem (Oreg.) Capital Press]

PASSING IN REVIEW

(By Dewey Rand)

How important are the forest lands and timber to the economy and recreation of the Northwest? What are the problems of this vast complex of public and private resources and industry, and what does the future hold? These questions were discussed by the top authorities in this field at Reed College last week.

The event was called the Citizens' Conference of the Pacific Northwest Forest Resources. It was sponsored by the Reed College Forest Endowment and the forest industries and arranged by a citizens' committee headed by Chairman Robert S. Miller, Portland attorney. The three broad subjects covered were forests in the economy, forests capacity to meet future demand, and forest resources management and use.

There are few people in this region who are not conscious of the importance of timber and the lands on which it grows. But there are not too many who have a comprehensive knowledge of their present economic value and of the enormous future potential. It was the obvious purpose of the conference to draw the broad picture and it is safe to say those who attended would agree that in this the conference was successful.

Problems of private and public ownership, taxes and protection, conservation and public use for recreation, watershed preservation and general forest management were discussed and the solutions proposed. All these are important and the public is all too little informed on the subjects. But what impressed this visitor to the conference is the fact that forests of the Northwest can be a perpetual source of revenue and recreation that will increase and not diminish if properly handled. Unlike oil or coal deposits, but similar to falling water, our forests can produce forever.

The U.S. Forest Service is taking a leading part in this long-range, multiple-use program. Richard McArdle, Chief of the Forest Service, told the conference the timber cut on Northwest Federal forests can be increased by 4 billion feet annually if the program of the Service is followed. The Federal forest plans, as outlined by McArdle, include planting 627,000 acres in trees, improving 1,800 miles of fishing streams, and building 13,400 new family units in camp and picnic areas. The Service also plans reconstruction or the supervision, if others do the work, of thousands of miles of access roads. The Forest Service is not forgetting the sportsman and recreationist while planning for perpetual timber production.

Private owners of forests, too, have abandoned the "cut and get out" methods of the past and the ever-increasing value of timber is making it practical for them to "farm" their timberlands. Tree growing has taken enormous strides in recent years and large and small owners of timber are now managing their forests with the future, and not a quick profit, in mind.

Oregon's great reliance on timber is often deplored, especially when the market for forest products softens as during the recent recessions. The great industry based on timber faces many problems, as speakers at the conference pointed out. Still, timber means to Oregon what oil does to Texas or coal to Pennsylvania. Unlike these two natural resources our timber need never be exhausted and Oregon has more timber than any State in the Union, not excepting Alaska.

And the most important point made by the speakers at the conference was, we thought, that both the private owners of timberlands and those who are the custodians of the State and Federal holdings have adopted the long-range view of this resource. For the most part, both private and public ownership seem determined to make this resource a perpetual benefit.

E. Kent Swift

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. PHILBIN. Mr. Speaker, I was deeply touched and profoundly grieved to learn of the passing on Friday of last week, July 17, of a cherished friend and a great business leader and philanthropist, E. Kent Swift, of Whitinsville, Mass., in my district.

I join the Whitinsville community and the many associates and friends of Mr. Swift in extending deepest sympathy to his family: Mrs. Howard S. Whiteside of Milton, Mass., Mrs. Thomas P. Almy of Pelham, N.Y., Mrs. John E. Sawyer of New Haven, Conn., and Mr. E. Kent Swift, Jr., of Whitinsville.

For many years, Mr. Swift had been recognized for his enlightened leadership and his almost limitless contributions of every character to our business life, the community, and the Nation.

Kent Swift was a man of most exceptional personal qualities. He was amiable and gentle and deeply interested in his fellow man. He was most gracious and courtly of manner, considerate and generous of impulse yet possessed of traits of

character which readily identified him as a man of action and doer of good deeds.

I will not attempt here to outline the many precious, immeasurable contributions which he made during his long lifetime to our business affairs, to the community, the State, and the Nation in the humblest and very best sense.

Kent Swift was a great, inspiring leader in every field to which he gave his talented attention. He was a man possessed of highest and noblest character, inflexible of purpose, strong of conviction, and loyal to the many causes which he embraced. He was a patriot and an American of the highest order, a shining symbol of our widely heralded free enterprise system under which he worked his way to the very top of his proud calling.

Kent Swift was a man of impeccable personal moral and intellectual integrity, devoted to lofty ideals, conscientious motives, and humane instincts. He was a devoted family man, a warm, loyal friend, and a great American. With word of his passing, his community was plunged into deep sorrow and grief and many heartfelt tributes were paid to this stalwart, noble figure, who by his good works, his constructive life, and his many good deeds, had preeminently won the respect, admiration, and affection of all those who knew him and the many who knew of his outstanding achievements.

A brief word upon his life is appropriate. Born in Eau Claire, Wis., December 10, 1878, he was descended from a long line of distinguished New England ancesters who lived years ago in the beautiful town of Falmouth, Mass., on famed Cape Cod. The family was engaged in the shipbuilding industry, then operating at a high peak, and subsequently became interested in extensive lumbering operations. As this great industry moved westward, the Swifts moved with it and Kent Swift passed his early years in the great State of Wisconsin. He attended Beloit Academy in that State and then returned to Massachusetts to take up his college studies at distinguished Williams College, Williamstown, Mass., from which he was graduated in the year 1900.

It was his original intention to matriculate at the world-famous Massachusetts Institute of Technology where he would work for a degree in mining engineering. However, his cousin, Mr. Marston Whitin, then head of the Whitin Machine Works, persuaded him to enter the employ of that growing company.

He started to work for the company as a mechanic and because of his ability, diligence, attention to duty and alert, creative mind, soon won the approval and confidence of Cousin Marston.

With each passing year, the bond of friendship and mutual confidence between Kent and Marston became closer and closer and the head of the company turned more and more toward this brilliant young man who was impressing everyone with his ability to master the intricate details of the technical business in which he was engaged.

His progress and advancement were marked. He rapidly rose from mechanic to supervisory duties and in 1906 was appointed assistant treasurer of the company. Kent was only 28 years of age at the time when he was promoted to be second in command of the Whitin factory, taking over full responsibility whenever Marston Whitin was away.

Five years later in 1911, he married gracious Katharine Leland Whitin, third daughter of George Marston Whitin, then treasurer of the company. As a wedding present, Mr. Whitin built the magnificent "Galesmeet," a lovely Georgian home on Northbridge Hill, largely built by Whitin craftsmen.

By 1913, Mr. Swift had taken over many of the management details of the business and 1 year later he became general manager.

In 1920, Mr. Swift was elected treasurer, continuing his duties as general manager. He served as president from 1933 to 1946, at which time he became chairman of the board of directors, a position he held at the time of his death.

It is during this period that the Whitin Machine Works grew in strength. A fully integrated main plant is located in Whitinsville, employing some 3,500 people, largely from the immediate area. A branch plant is located in Charlotte, N.C., and a wholly owned subsidiary, Fayscott Corp., is located in Dexter, Maine. In recent years, Whitin Machine Works began to diversify its operations. The company recently purchased the Landis Machine Co. of St. Louis, Mo., a well known and respected name in the shoe repair equipment field.

Harvey-Wells Electronics, Inc., of Southbridge, which is also in my district, is now owned by Whitin. American Type Founders Co., Inc., of Elizabeth, N.J., is another recent acquisition of the company in its diversification program. Other branch plants and subsidiaries are Whiten of Canada, Ltd., Toronto, Ontario, Canada; Whitin-France, Paris, France; Whitin Business Machine Corp., Whitinsville Water Co., and Deutsche Whitin Gesellschaft, M.B.H., Wiesbaden, Germany.

Mr. Swift, down through the years, maintained a live and vigorous interest in all activities of the Whitin plant. It is said that no other executive of the company could take a visitor on a more comprehensive or more complete tour of the factory with stops made periodically for talks with workers whom Mr. Swift knew by name.

His warm friendliness with employees was an important ingredient of the Swift success story. He was always available to employees and never was it necessary to make appointments. The door to his office was always open. Thus, minor office or shop difficulties were settled immediately.

While Mr. Swift managed a large company with a multitude of problems and activities, he was never too busy to listen to his employees. As a result, the company has a rather unique and unusual employee service record for an enterprise of its size. Mr. Swift always pointed with pride to his own long service record and that of many of his employees. More than 260 have been with the company for 40 years or more. Of these, 20 have more than 50 years of continuous service.

The experience and knowledge of such an employee group over these long periods of time have resulted in an unexcelled esprit de corps and a craftsmanship and workmanship recognized throughout the textile world as being second to none.

Mr. Swift was especially proud of the Whitin employees during the war years when a skilled labor force might well have been dispersed. The company turned to defense production with achievements that still prompt a deep sense of pride in many of the older employees.

Equipped with a large foundry and many skills, the Whitin plant convinced the Maritime Commission that it could turn out auxiliary steam engines for liberty ships. Each ship needed five engines which contained many cast iron parts. The Whitin production record amazed the Maritime experts, who were reluctant to place the initial contract. Whitin produced about 11,000 such engines, almost 90 percent of the entire national production, to the extreme gratification of the Maritime Commission.

Whitin also turned out during the war some 73,000 B–24 magnetos, an intricate device, in another demonstration of the ability range and versatility of its workers, production facilities and management.

Among Mr. Swift's community accomplishments was the erection in 1923 of the recreational center as a memorial to George Marston Whitin. The Whitin community gymnasium housed a swimming pool, gymnasium, shooting gallery, billiard rooms, ballroom, and social rooms. A disastrous fire last April left only the swimming pool untouched. A community campaign is underway to rebuild the gymnasium.

Mr. Swift's business career, in addition to his 59-year association with Whitin Machine Works, included 39 directorships, 6 presidencies, and 8 miscellaneous other titles with various large concerns, many of them textile companies in New England and the South.

At the time of his death, he was a member of the board of directors of the following companies: American Mutual Liability Insurance Co., Ashworth Brothers, Inc., Boston Manufacturers Mutual Insurance Co., Massachusetts Mutual Life Insurance Co., Mutual Boiler and Machinery Insurance Co., Pepperell Manufacturing Co., Scott Lumber Co., Seaboard Foundry, Second Bank-State Street Trust Co., Whitinsville National Bank, Whitinsville Savings Bank, Whitin Machine Works, and Harvey-Wells Electronics, Inc., a subsidiary of Whitin Machine Works.

Today, largely due to the leadership of Kent Swift, the Whitin Machine Works is the world's largest maker of textile machinery to the point that practically every textile item produced is processed at some stage by a Whitin machine. These items include bedding, garments, and even tire cords.

As I stated before, Kent Swift was a progressive-minded and enlightened industrial leader who deeply felt, not only his responsibility to management, but also his responsibility to labor and the community. Under his sound, wise guidance, various employee welfare and housing programs were developed and medical and health services inaugurated. Indoor and outdoor recreational facilities were provided, many of them, not only for his own workers, but for members of the community as well.

He took a lively active interest in the affairs of his town and for many years served as chairman of its important finance committee, passing and advising upon a multitude of municipal expenditures to serve the indispensable purposes of town government. He interested himself continually in town affairs—religious, patriotic, civic, recreational and charitable. His counsel and advise was sought by many of his fellow citizens, and his door and generous heart were always open to those who sought his counsel and assistance.

Kent Swift was a broad, tolerant man with friends in every walk of life, in every religious and racial group. He truly loved his fellowman and was eager to serve and help him. A man of simple tastes and habits—congenial, discreet and approachable, he deplored and shunned provincialism and narrow-mindedness and retained his balance and conviction with a superb poise and soundness of judgment that was the envy of contemporaries in every calling.

The personality, character, life and contributions of Kent Swift will long be remembered by a grateful people. He has left an indelible impression upon our times. He has fought the good fight for the principles and ideals in which he believed. He has demonstrated in his lifetime that there is a nobler and unselfish side to every great man and that truly illustrious leadership cannot be confined within narrow boundaries.

In the continuous stream of life which covers generation after generation, many people have contributed to the progress of our Nation. Certainly no one has contributed more unselfishly, constructively and with more noble impulses, and few indeed have ever contributed with such outstanding results.

The name of Kent Swift will remain for very many years to inspire and to strengthen those who love our country and who are willing to dedicate themselves to making it a better place in which to live.

The world is better because of men like Kent Swift, and as we mourn his passing, we may at the same time, express our deep gratitude that he lived among us so long and gave so generously of himself to his friends, his fellow citizens and his beloved country.

A truly great man and a cherished friend passed to his heavenly home. May he find peace and rest in his eternal reward.

Thompson Spurns Teamsters' Dictation

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, July 29, 1959

Mr. WILLIAMS of New Jersey. Mr. President, with the hurtling of charges in the public press and elsewhere about concessions to Hoffa-like dictation in endeavors to pass labor-management reform legislation, it is worthwhile to note, I think, the kind of resistance which such attempts meet. In an article from a recent issue of the Trentonian, there is described a visit from one of the Teamsters' attorneys to the office of Congressman FRANK THOMPSON of New Jersey's Fourth Congressional District. Knowing THOMPSON's long friendship with labor, the Teamsters' man had recommendations for a labor bill with the thought in mind that the Congressman would accept his version. This version, however, did not fit in at all with the stronger measures supported by Congressman THOMPSON—and he rejected the recommendations. That this rejection was not lightly taken soon became evident when Congressman THOMPSON was informed that a mass meeting was in the making to consider what his stand meant—with the implied suggestion that such publicity could be very unfortunate. But how ridiculous these kinds of tactics are was revealed almost immediately through a statement from the lips of an assistant to President Meany who said:

> Congressman FRANK THOMPSON always approaches all legislation with the people's welfare in mind. He is extremely fair minded * * * I anticipate he'll show the usual good judgment in the pending legislation.

I think this clearly demonstrates that such reprehensible efforts on the part of a few individuals have little effect. I am glad to know that when a labor bill is forthcoming, it will be with the help of men of such outstanding caliber as FRANK THOMPSON. I am proud of my good friend, who, as outlined above, is giving such outstanding representation to the people of his congressional district, to the State and to the Nation.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THOMPSON SPURNS TEAMSTERS' DICTATION
(By Cyril J. O'Brien)

WASHINGTON.—The hand of Hoffa which tapped legislators on Capitol Hill recently was named Sidney Zagri, Teamster attorney.

In touch with Congressman FRANK THOMPSON, pro-labor, labor-backed and labor-praised, Zagri was dissatisfied. THOMPSON would not buy Zagri's version of what a labor racketeering law should be. THOMPSON wanted sterner measures. But then THOMPSON had a good armor of consistent friendship with labor and he could play independent of Hoffa's recommendations. Zagri left the office, unhappy.

Soon a note from the Mercer-Burlington area proved that Hoffa or Mr. Zagri had a long arm. The Congressman was advised from home that there might be a mass meeting in Trenton to consider THOMPSON and his stand. Generally, it could be bad, especially on publicity—unless you had a long record, strong enough to make the threat ridiculous.

And apparently this was the case. From headquarters of the AFL–CIO, almost on the same day as the threat-letter, came strong support from Andrew J. Biemiller, assistant to President Meany and CIO–AFL legislative department head.

Biemiller said: "Congressman FRANK THOMPSON always approaches all legislation with the people's welfare in mind * * * He is extremely fair minded * * * I anticipate he'll show the usual good judgment in the pending legislation * * *."

PRODUCING LABOR BILL INTENSIVE WORK
(By FRANK THOMPSON, JR., Member of Congress, Fourth New Jersey District)

On July 23, following 5 weeks of work as intensive as any I have ever known, the House Education and Labor Committee reported to the House its version of the Kennedy-Ervin reform bill.

Working against a background of threats which included everything from "getting your head knocked off" to "we'll get you the next time you run," and in the midst of heated opinions and frayed nerves, the committee steered a course between the shoals of bitterness on both port and starboard sides. The left-hand shoal was defiance of the Nation's obvious demand for reform legislation—the course was to kill the bill. The right-hand shoal was defiance of the Nation's working people's right to bargain collectively—the course was to report a bill so tough as to destroy our great labor movement.

By virtue of hard work and appeals, the committee finally achieved successful passage through the treacherous channel and ended up with a bill which deserves the support of all fairminded people, who believe that an effective labor reform bill should be enacted at this session of Congress. In this report and in my report of next week, I shall endeavor to describe the legislation and its background. It is my belief that the subject of labor reform is the most important domestic issue before the Nation at this time.

Your Representative's actions and votes will have no appeal to either those who insisted upon no legislation at all or to those who wanted punitive legislation. Some weeks ago in this report I stated my position. I adhered to it strictly and, therefore, cannot understand why so many representatives of both labor and management appeared to be surprised by my middle course votes.

Teamster boss Jimmy Hoffa dipped into the St. Louis Teamster organization and brought to Washington as his chief lawyer and lobbyist, an attorney named Sidney Zagri. Zagri's activities have been well documented by Time (July 27), Life (July 27), and in a host of other papers and journals.

The Teamster hired hand appeared in my office on two or three occasions early in the game. On one of his visits he was accom-

panied by a dozen or more New Jersey Teamster leaders. Starting his conversations reasonably and smoothly, in lawyerlike fashion, Zagri appealed for support for some 50 pages of amendments to the 70-page Senate bill.

When he realized that I was not sympathetic, lawyer Zagri discarded his attorney attire and suddenly became some sort of political boss. Talking as if he had at his disposal an election certificate, he indicated that I had better do his will. One or two other labor leaders used the same approach, each with the same lack of success.

What Zagri and other Washington lobbyists fail to realize is that those of us who are elected Representatives are known to our people. We are here because of majorities received in free elections conducted by secret ballot in which freemen expressed their will. Hoffa and Zagri disdain free elections and secret ballots—they want no part of democracy in their union and I want no part of Hoffa or Zagri. I have given them to understand that I would rather be defeated than to be indebted to them for being in Congress. In this connection, I can state honestly that not one Teamster from the Fourth Congressional District has threatened me in any way. Two of their leaders have been to Washington to see me and both complained about the bill, but both were entirely reasonable and fair.

In the July 17, 1959, issue of the Indiana Labor Tribune, that State's Teamster paper, Sidney Zagri has a signed article in which he attacks Indiana's brilliant freshman Congressman JOHN BRADEMAS. The basis of the attack is a flattering one, for it says that BRADEMAS' "voting has largely followed the lead of the Thompson-Udall Democrats, of ARIZONA, group." Zagri is a busy fellow. He's doing his smear job on a nationwide basis.

On the opposite side from the Teamsters those fighting against the committee bill are the National Association of Manufacturers and the U.S. Chamber of Commerce. Their vehement opposition, including the usual election day threats, is based upon the fact that our bill will not break the back of organized labor.

All in all, the opposition to the reported bill makes even more clear the fact that it is an effective, strong document. Some labor elements are opposed because they know it will bring reform. The management elements are opposed because it will allow the continued and necessary process of collective bargaining. Fairness is a great American tradition. In this case, the path of fairness is clear—it is represented by the committee's version of the Kennedy bill. I am confident that the Congress will choose the fair path.

Next week I shall analyze the major provisions of the labor legislation and will set forth some of the alternatives. I would appreciate the views of anyone who cares to write. Please address mail to: Representative FRANK THOMPSON, Jr., room 452 Old House Office Building Washington, D.C.

Food, Freedom, and a World in Revolution

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 29, 1959

Mr. HOLIFIELD. Mr. Speaker, I ask unanimous consent to have an article from the July 1959 issue of the Reporter magazine printed in the Appendix of the RECORD.

The article was written by a distinguished Californian, Mr. Lionel Steinberg. Mr. Steinberg is a member of the California State Board of Agriculture and a practical and successful farmer in his own right. He has traveled throughout the world and, in my opinion, is qualified to discuss the important subjects included in the article.

FOOD, FREEDOM, AND A WORLD IN REVOLUTION

(By Lionel Steinberg)

Some one should tell us that it's 1776 all over the world, and that Russian communism is not the last hurdle to continuous peace. World chaos will continue throughout the remaining years of this century even if all the communists in the world were to suddenly and unaccountably drop dead. The world revolutions—not Russia—are the sign of the times.

Two-thirds of the people of the world go to bed hungry every night of their lives. Some two billion of them live on less than $100 each a year. In fact, most of the world's people suffer from conditions which are the basis of the greatest revolution in history: hunger, poverty, disease, the pressure of increasing population, limited supplies of food, foreign exploitation, the alienation of natural resources for quick profits, colonialism, bondage, absentee ownership of most of the land, corruption of officials, oppressive taxation, no access to capital, disastrous interest rates, no freedom of speech, no freedom of press, no freedom of assembly, no right to vote or hold office.

Almost a decade ago Justice William Douglas warned upon returning from Asia, "There are professional agitators who stir this brew of discontent but the force comes from the masses. I have not seen a village between the Mediterranean and the Pacific that was not stirring uneasily."

In the past 6 years, almost by default, Russia has taken over world leadership from the United States. David Lawrence's conservative U.S. News & World Report gave a detailed account (October 3, 1958) of how the Russians are operating in 72 countries. The magazine reported a global war by the Communists, fought on Communist terms, with Russia on the offensive almost everywhere: in Latin America, Europe, Africa, the Far East, South Asia, the Middle East. The Russians are shrewdly waging war on the United States by every means short of shooting.

Khrushchev bragged recently, "We declare a war we will win on the United States—in the peaceful field of trade. We will bury you."

Here in the United States at the head of the Nation is an affable but tired general with a country club mentality elected and reelected by a people, that according to our psychiatrist friends, see in Eisenhower a father image. There is a Secretary of Agriculture with a surplus psychosis who is petrified by a year's surplus stock of wheat, corn and cotton, who between falling prices and rising costs, has presided over the liquidation of 600,000 farms and forced 4 million Americans off their farms. American farmers, the most productive in the world, copied by all nations, now make up 12 percent of the U.S. population and yet receive only 5 percent of the national income. In the past 6 years realized net farm income in the United States has dropped 25 percent. In 1957 returns to farm owners for their labor and management reached a low of 69 cents an hour.

The Department of Interior is led by men who apologize for the TVA and have evolved a new power concept of "partnership" with the private utilities. This partnership has been described as one in which the Government feeds the cow and the utilities sell the milk.

Aldous Huxley in his new book, "Brave New World Revisited," describes modern Western man as lulled by tranquilizers, swayed gently into conformity by the bought witchdoctors of Madison Avenue, led softly into a world of dreaming and docility by television and the other devices that sell vicarious living, and on the verge of being kneaded into a universal and mediocre dough.

We Americans maintain a stiff upper lip as we fearfully continue a $40-billion a year defense budget and engage in a feverish race with Russia to control outer space. We Americans spend $5 billion annually on liquor and $5 billion a year on beer and wine. Gambling is a $10 billion a year bite on the American people. Our liquor budget is 10 times larger than the amount we spend on basic research. It is twice the cost of foreign aid, and half again as much as we spend on schools.

The revelation of Russia's atomic prowess and other scientific achievements has finally awakened American educators and parents to the inadequacies of the American educational system, in which most talented children go untended and only those who can afford a higher education get one.

AFRICANS EDUCATED IN RUSSIA

Russia is educating thousands of young Africans in European universities with the sure conviction they will return eventually to lead colonial administrations. Latin American countries, hard hit by the fall in commodity prices, are tempted with Russian offers to buy wool, hides, and coffee. The Russians also make proposals to develop the natural resources of these underdeveloped areas. The same tactics are used in the Middle East, with Russian support for Nasser's growing Arab empire. The Russians offer to swap Communist arms for cotton, vote $100 million initial appropriations for the development of the Aswan Dam, and capitalize on the Arab hatred of Israel while shrewdly seeking control of Middle East oil. In south Asia, Russia promises loans and aid, infiltrates and woos Afghanistan, Thailand, Burma, Laos, and Cambodia. Everywhere they raise the "Ugly American" image.

They move swiftly into readymade crises—unemployment in Italy, Algerian terrorism in France, angry fishermen in Iceland.

Japanese workers and businessmen are promised big new trade with Red China and India gets steelmaking equipment.

Not only the Russians, but the Chinese Communists, are remolding world history today. With a staggering crash commune program, China seeks to feed 650 million Chinese, trying to accomplish in a decade what Russia did in 35 years. In less than 1 year, all farms have been collectivized and 500 million Chinese peasants have been reorganized into 26,400 peoples communes. The Chinese refer to their commune as an entirely new organization for the masses—pure socialism. The communes range from a few square miles to the size of an average U.S. county and from a few thousand families to 150,000 members. They embrace collective farms, factories, schools, stores, and every other facet of rural life in one self-contained unit, organized along military lines.

SIGNIFICANCE OF THE COMMUNES

The speed of the commune drive has astonished western observers who can scarcely conceive of human engineering on such a vast inhuman scale. Hundreds of thousands of peasants' homes have been burned to make way for communal barracks that house male and female members separately. Children live in communal nurseries or boarding schools and see their parents briefly over weekends. Commune workers serve in labor battalions; they work in fields, factories, on roads or dams, or irrigation projects. They work at fixed wages with a bonus system for extra labor. Information from China is scarce because our Government has forbidden newsmen to go there, but it has been reported that the Chinese communes offer

some medical care and other necessities to millions who had nothing before. If true, what impression are the communes making on non-Chinese Asians? And what alternative has been suggested by the West?

Since beginning this article, I have attended a World Farmers' Convention in Israel where some 400 farmers and agrarian leaders and agricultural officials from 31 countries had an opportunity to study and live and work in the communal and cooperative villages of Israel, known as the Kubbutz and Moshav. They came from Asia, Africa, South America, North America, and Europe.

I did not speak to a single delegate who did not share my own tremendous enthusiasm and admiration for the democratic processes, the group-living techniques, and proficiency of the 700 Israel cooperative and communal villages which have helped expand Israel's agricultural production fivefold in a decade, making it possible to house and feed a population which has grown from 600,000 to 2 million since 1948. In 1948 80 percent of the food was imported, today 20 percent.

Of particular interest was the social and cultural achievements, for each village is administered democratically by committees selected by vote from the 150 families that make up the average cooperative settlement. Most Kubbutzim have their own libraries, music rooms as well as schools. Many have auditoriums where music and theater groups entertain each week.

Although some of the delegates from Europe and the Western Hemisphere noted the superior productive records of the Israel commercial private farms, those from Burma, Ghana, Ceylon, Dahomey and India saw much that would be of vast benefit in the less developed areas of the world. The Israel Kubbutzem admirably meet the needs of countries with frontiers to settle and protect, where there is a shortage of capital and experienced farmers, for equipment and facilities and technicians can be shared.

Perhaps in little Vermont-sized Israel may be found the alternative to the totalitarian communes of China. Israel governmental leaders proudly state their main export in the coming decade will be experts. Many farm delegates from the neutral countries said they feared both Russian and American strings attached to help offered.

THE FUTURE—IF MAO SUCCEEDS

It may come as a surprise to some Americans that Mao Tse-tung seeks seriously to make China the world's No. 1 power. China's original slogan, Surpass Britain in 15 years, has been modified to 5 years. Red China did not turn out a single tractor in 1957. In 1958, they claim 20,000 were produced. The goal for 1959 is 200,000. Coal and steel production goals double yearly. They boast ability to feed 5 billion people if necessary.

Provinces ravaged annually by floods now have systems of dykes that were erected by battalions of 20,000 men. Radio Peiping has announced that 40 million peasants are now working on irrigation and dam-building projects.

Western journalists report the frantic pace is bringing national exhaustion with Chinese officials dazed with fatigue. Sixteen to 20 hours a day, 7 days a week of work were required in some communities. Peking Peoples Daily warned recently, "We must see that the workers get sufficient rest for the sake of their health. By doing so they will be available to maintain their labor enthusiasm indefinitely."

If Mao succeeds even partially, his use of human masses as a short cut to rapid industrialization will without doubt capture the imagination of the leaders of the uncommitted nations of Asia and Africa.

On January 20, 1949, President Harry S. Truman recognized the world ferment. He said, in the memorable fourth point of an address which could have made world history:

"We must embark on a bold new program for making the benefits of scientific advances and industrial progress available for the improvement and growth of underdeveloped areas."

Tragically, the program never really got off the ground under the Democrats and has suffered from neglect, misunderstanding, and finally abandonment by the Eisenhower administration.

The Soviet Union has seized upon the boiling unrest that exists in the underdeveloped countries as a means of spreading its influence and power. In cities, villages, and on the farms, the Soviet Union spreads promises of peace, plenty, and freedom and calls on the people to accept Soviet leadership in a revolutionary struggle against "decadent" western democracies.

Chester Bowles has said, "We cannot expect to live peacefully in a world slum overflowing with tension and hate; nor can we impose peace and understanding on such a world with atom bombs."

But time is running out for us. Sociologists estimate world population will reach 6 billion by the year 2000, almost double that of today. Each year another 45 million infants are born throughout the world. Even in the United States, population by the year 2000 may reach 400 million with a maximum potential of 1 billion people in the year 2050.

Collectively, the world has the resources, the labor, and the genius to live abundantly in peace and freedom.

The United States must accept the challenge with a world blueprint for the future. We must make it clear to the world that the American people realize that peace and freedom cannot long survive want and hunger. Nothing less than a brandnew cabinet level department can dramatize to ourselves and to the world the seriousness and the scope of our intent.

Such an agency might well be titled "The Department for World Development," intertwining the resources of the Departments of State, Agriculture, Interior, and Commerce.

We should be prepared to offer the world our technicians, scientists, administrators, and engineers to help nations willing to participate in vast overall programs.

It has been estimated that a 20-year united world redevelopment program would take at least $500 billion. Half should come from the undeveloped nations, with their yearly contributions increasing over the years as their income rises. The other half should come from leading countries of the United Nations.

Ten percent of the military budgets of the United States and our allies could easily finance this gigantic program to bring two-thirds of the peoples of the world from the middle ages into the 20th century, from revolution into peace.

The grim alternative to bold American leadership is world revolution led by the Soviet Union and China and ultimate American isolation.

Industrial Development Abroad: Threat or Opportunity?

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 29, 1959

Mr. WILEY. Mr. President, we recognize that the United States is facing some serious challenges in development of a realistic trade policy.

Among the major questions we face in this field is included: "Is technological industrial development abroad a threat or an opportunity?"

Recently, the Committee for a National Trade Policy came to the conclusion that "technological and industrial advancement in both underdeveloped and industrially mature countries results in an expansion, rather than an obstruction, of international trade."

Conversely, there are those who feel that the increase in industrial capacity abroad represents a threat to U.S. enterprise; particularly those who find outlets for their products in foreign markets.

We are well aware, of course, that with our higher standards of living, wage scales, cost of operation, and other factors, we are at a competitive disadvantage with manufacturers in a great many other countries.

Recognizing that not only our foreign trade, but a substantial segment of our domestic economy, depends upon finding markets for U.S. products elsewhere in the world, this situation is of course of increasing importance to us.

A recent edition of Trade Talk, published by the Committee for a National Trade Policy, contained an article reemphasizing, among other things, the growing challenge to the pioneering, competitive spirit of American industry in international trade. As a reflection of this particular side of the question, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INDUSTRIAL DEVELOPMENT ABROAD: THREAT OR OPPORTUNITY?

Technological and industrial advancement in both underdeveloped and industrially-mature countries results in expansion, rather than contraction, of international trade.

This finding was reached in a survey, just published by Committee for a National Trade Policy, entitled "Industrial Development Abroad—Threat or Opportunity?" Prepared for the Research and Education Committee for a Free World, the report was undertaken in the light of the increasing attention being given to the effects, at home and abroad, of public and private U.S. investment overseas.

The survey shows that investment in productive enterprise overseas does not result in loss of market outlets at home or abroad for U.S. manufacturers but, on the contrary, opens the way to greatly increased sales of manufactured goods.

Industrially mature countries are today their own best customers for each others' exports of manufactured products, the survey holds. Except in highly abnormal periods, the rise in volume of manufactured goods produced in countries in process of industrialization has invariably been accompanied by an increase in the volume of imports of manufactured goods—including imports of consumer goods. As the per capita incomes rise with increased productivity in the industrializing countries, the latent demand for a greater variety and volume of manufactured goods for home consumption can be increasingly satisfied, and total imports of manufactured products therefore tend to increase.

As to future possibilities, the report recognizes that, while some particular indus-

tries may be adversely affected, the overall effect of industrialization abroad can and should be a further marked expansion of market outlets for U.S. manufactures. Even a very small annual percentage rise in the incomes of the underdeveloped countries would result in large increases in imports of manufactured goods from the United States and other countries. Considered indispensable for the realization of these possibilities are: continued growth in the industrially-advanced countries; commercial policies that encourage the growth of international trade; flexibility in adjusting to, and taking full advantage of, changing competitive conditions on the part of the industrialized countries.

The ultimate outcome, according to the study, will turn largely on whether the pioneer, competitive spirit of American industry, its great resourcefulness in innovation and adaptation to changing conditions, continue to predominate.

Thus, the survey states, the question becomes one, not of capabilities, but of spirit and attitude. If the economic development and industrial growth of the underdeveloped countries is looked upon as an opportunity for exploiting to the full our latent capabilities for technological and industrial progress, we can greatly profit from it. "If, on the other hand, our Government reacts to the new conditions by succumbing to pressures to preserve the industrial status quo in the midst of fundamental world economic change, it will have lost a great opportunity. And losing it, the traditional pioneer spirit of which we have been so justly proud will have succumbed to a new attitude that can lead only to eventual economic stagnation."

In conclusion, the study emphasizes the vital importance, from the standpoint of national security, of policies which encourage economic growth in the free world. In the midst of the cold war and of the "revolution of rising expectations" in the newly independent nations, this becomes crucial. "Our only security, our only hope for prosperity and happiness, lie in adaption to change, in seeking to direct change to our advantage and to that of the whole free world. The surest way to impoverish ourselves and lose our freedom is to hoard our investment capital at home, to build national walls against competition, and to protect and perpetuate inefficient methods and outmoded products."

The survey was written under the direction of economist Lynn R. Edminster, former special assistant to the Secretary of State and Vice Chairman of the U.S. Tariff Commission; assisted by David J. Steinberg, economic consultant, and Gizella Huber, statistical consultant.

Copies of the study, containing 20 tables and charts, may be obtained on request.

Neville G. Penrose, Chairman of the International Good Neighbor Conference, Is Helping Ambassador Hill Maintain Good Relations With Mexico

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, July 29, 1959

Mr. YARBOROUGH. Mr. President, this country has long enjoyed the most excellent and friendly relations with our good neighbor to the South, the Republic of Mexico.

The International Good Neighbor Conference is one organization which is helping to maintain these good relations and to promote even more understanding and cooperation between the two nations. Mr. Neville G. Penrose of Fort Worth is the organization's chairman.

The book "History of the Texas Good Neighbor Commission" by Nellie Ward Kingrea tells of Mr. Penrose's fine work in the interest of neighborliness between the United States and Mexico.

Recently, Mr. Penrose was host to Robert C. Hill, able and diligent U.S. Ambassador to Mexico, and the meeting provided many Texans with more insight into the mutual cooperation of the two countries.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Horace Craig which was printed in the Fort Worth Star-Telegram for Sunday, July 26, 1959, entitled: "Bracero Situation Reviewed—U.S. Envoy Praises Mexico."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRACERO SITUATION REVIEWED—U.S. ENVOY PRAISES MEXICO

(By Horace Craig)

Robert C. Hill, U.S. Ambassador to Mexico, said in Fort Worth Saturday that the United States and Mexican Governments are working together to solve difficulties in the bracero program in Texas.

"The program is very important to the economy of Mexico, as it is to the United States," he said.

"We are in touch on the bracero situation almost weekly."

Some West Texas towns—particularly Lubbock—were blacklisted recently from participation in the bracero program.

The Lubbock ban, lifted recently, came when a Lubbock beauty shop refused service to Mexicans.

Hill pointed out that some 445,000 braceros work on U.S. farms and ranches each year, adding $40 million a year to the Mexican economy.

He added that Mexico is anxious to continue the program and that "cooperation from the Mexican Government has been excellent."

Hill has been Ambassador to Mexico since May 1957, and previously was Ambassador to Costa Rica and El Salvador.

He was honored at a luncheon Saturday at Shady Oaks Country Club. Neville G. Penrose, Chairman of the International Good Neighbor Conference, was host.

Saturday night, Hill addressed a Dallas meeting of business and civic leaders in the interest of increased tourism to Mexico.

In the earlier interview, Hill said Texans have a stake in Mexican tourism because "it's not a oneway street."

He noted that most tourists to Mexico enter that country from Texas points, thereby adding to the prosperity of the State.

"Tourism is the No. 1 industry in Mexico," Hill said. "They've built new hotels and facilities, and they want to fill them."

He said Mexico has an average of 600,000 tourist visitors who spend $600 million annually.

The country has developed its facilities now to handle 750,000 tourists each year—not including border traffic.

But, Hill added, the border traffic is important too.

He said 25 million persons enter Mexico each year at Juarez. A third bridge will be dedicated next month to relieve the congestion there.

With a national population of only 33 million, Hill said the Juarez entry figure is even more impressive. Tourism, however, is not the country's only economic support.

"Mexico has a strong economy," Hill said. "It is the only country in Latin America which has complete diversification of its economy * * * they've had the foresight to industrialize."

Of Mexican food, Hill said his family eats it 4 days out of 7—and thrives on it.

Of the siesta, Hill said he enjoys that custom, too.

"But Mexico is not the land of 'manana,'" he explained. "They put in a long day and they work hard down there."

The ambassador explained that a Mexican's work day may begin at 11 a.m. and last until 2 p.m.—when he takes off 3 hours for lunch.

"But he comes back to work at 5 p.m. and works until 10 p.m.," Hill explained.

Of the universal problem of communism, Hill said "Mexico deserves great credit for the way they've handled the situation."

He said there is no chance for a Castro-like uprising in Mexico, and noted that the country has been at peace 30 years.

Before leaving Fort Worth, Hill put in a plug for Mexico's Pan American Fair being planned for next year. He said the country is going all-out to celebrate the 100th anniversary of the Mexican Revolution, and the 50th anniversary of its success.

Labor Reform Legislation

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the St. Louis (Mo.) Post-Dispatch on July 6, 1959, entitled "On Whose Side?":

ON WHOSE SIDE?

After more than 6 weeks the House Labor Committee is still struggling with the writing of a labor reform bill. The committee is under intense union pressure. Every member of it, and, of course, every Member of the House, must face the voters next year. Union leaders are making the most of their concentrated power, especially in city districts, to affect the results of congressional elections.

So it is not surprising that the reports from the committee speak of a steady drift toward weakening one clause after another of the Senate-passed bill. The Senate bill itself, in our opinion, does not meet the public demand for a genuine and effective reform measure which adequately corrects the abuses exposed by the McClellan investigation. To water it down still further would represent a humiliating defeat of the public interest by organized group pressure.

Inevitably, the question is now arising: Would not half a loaf be better than none? A bill which carried out some of the needed reforms might very well be preferable to no legislation at all, but individual Representatives must be judged by their individual contributions to the final result. A Congressman who votes and works for a watered-down bill instead of a truly effective and comprehensive one must be prepared to go before the voters as a candidate who placed the union lobby's interest above the public interest.

It is not difficult to tell where the public interest lies. It lies, first, in reasonable but effective reform of internal union organization: in public accountability for union welfare funds and other finances, in protecting the rights of union members from usurpation by union bosses, in making the leaders more directly answerable to the rank and file. Secondly, the public interest demands effective legislation against secondary boycotts and "blackmail" picketing.

The first general objective can be attained by adopting the Senate bill's provisions on financial accounting and its bill of rights for union members, preferably with a stronger enforcement clause. The second objective requires rewriting of the Senate measure as it applies to "hot cargo" and blackmail picketing.

The House could find no better guide to legislation on the latter points than Secretary of Labor Mitchell's proposals. Mr. Mitchell is not trying to outlaw legitimate secondary boycotts—those, for example, which are directed against a company's performing struck work—nor is he trying to outlaw legitimate picketing. His proposed amendments would strike only at the kind of boycott by which a union wages a dispute with one employer by penalizing an innocent one, and at the kind of picketing which permits "top-down organizing" aimed at intimidating the employer instead of persuading the employees.

These are the minimum standards of an adequate labor reform bill, and Congressmen will be judged by whether they fight to protect or to tear down these standards. There is no public interest in legislation designed to weaken the right of collective bargaining. There is a strong public interest in legislation to curb the excesses of unscrupulous union leaders like Jimmy Hoffa. Every Congressman should be prepared to let his constituents know whose side he is on.

Civil Defense: So What Is Money?

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE SENATE OF THE UNITED STATES
Wednesday, July 29, 1959

Mr. YOUNG of Ohio. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial, "So What Is Money?" which was published in the Springfield Daily News, a leading Ohio newspaper, on July 5, 1959.

I believe that the editorial points out once again the waste of the taxpayers' money on our obsolete civil defense program. It cites as an example the misuse and mismanagement by civil defense officials of Federal surplus property donated to a county in the State of Ohio. I commend this to my colleagues in the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SO WHAT IS MONEY?

Another of the many examples of loose management by civil defense authorities, resulting in the loss of tremendous sums of money contributed by American taxpayers, has turned up in Ohio. State civil defense headquarters in Columbus has called upon Champaign County officials to return thousands of dollars' worth of civil defense equipment which that county is said to have received last year. Improper use of this equipment is charged.

Regardless of circumstances, one can hardly blame the Champaign County officials for trying to get their share of this equipment. After all, citizens of that county pay Federal taxes and have helped to provide the funds with which such equipment was originally purchased. Throughout the Nation, various political subdivisions have been participating in this distribution of so-called surplus property.

Gen. Loren G. Windom, adjutant general of Ohio, says that it was a mistake in judgment that permitted the Champaign County representatives to obtain unlimited amounts of the surplus equipment. One or two such mistakes could be forgiven, but they have been turning up here and there in innumerable instances. Aside from those disclosed on various occasions by U.S. Senator STEPHEN YOUNG, many others have been brought to light by newspaper and other private investigations into civil defense operations.

No one can condone, of course, the use of any Government equipment by private individuals for private purposes, but there is question as to why any Government surplus items should be stored merely to rot away if they can be put to advantageous use for the citizens who footed the bill for the equipment in the first place.

The trouble appears to be that the Nation has permitted itself to be frightened by possibilities of nuclear warfare into dumping huge sums of money in any sort of thing that at first glance would appear to offer some sort of defense in case of attack. So much of the Nation's wealth could be wasted in such fruitless efforts that if war did come we would be ill prepared economically to cope with it.

What is needed is a down-to-earth study of the entire defense situation with a view of putting it on a practical basis both as to its operations and its costs. Certainly America wants to be prepared against any eventualities, but there is a vast difference between actual protection and spending ourselves bankrupt buying sand with which to cover our heads.

Murrow Questions State Department's Right To Restrict Travel of American Citizens

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 29, 1959

Mr. ROOSEVELT. Mr. Speaker, on June 11 of this year, Mr. Edward R. Murrow, a most distinguished member of the world of news, devoted a major portion of his broadcast to the matter of rights of Americans to travel abroad.

His comments revolved around the case of a reporter, Mr. William Worthy, Jr., and the U.S. court of appeals decision upholding the restrictive policy of the State Department.

The comments made by Mr. Murrow deserve, in my opinion, the widest possible dissemination and I am most pleased, therefore, to insert them at this point in the RECORD.

EDWARD R. MURROW WITH THE NEWS, CBS RADIO NETWORK, JUNE 11, 1959

The right of Americans to travel abroad is in the news again. The case involves reporter William Worthy, Jr. In 1956 he went to Communist China and to Hungary, countries for which his passport was not valid. When he came home the State Department lifted his passport, but offered him another if he would agree to accept the restrictions. Worthy refused, and went to court to plead his right as a newsman to go where he pleases.

A three-judge U.S. court of appeals has upheld the State Department's action—has in effect said that the Secretary of State, acting on behalf of the President, can at his discretion deny American citizens the right to travel to specific areas. The court said: "In foreign affairs, especially in the intimate posture of today's world of jets, radio and atomic power, an individual's yen to go and to enquire may be circumscribed." And it went on to say: "A blustering inquisitor, avowing his own freedom to go and do as he pleases, can throw the whole international neighborhood into turmoil."

This curious doctrine may come as a surprise to foreign correspondents who have worked for many years under dictatorships without either blustering or creating turmoil.

The court held that the Constitution gives the President the authority to evaluate the military and political exigencies in foreign countries. The courts are the least able of all organs of Government to make such evaluation, and they are wholly without authority to make them. Judgment of what course of action will promote our foreign relations has been entrusted to the President, not to the courts, journalists, scholars, or even public opinion. So the court ruled against Mr. Worthy.

It will now be for the Supreme Court to decide whether this is the last word on the rights of unrestricted travel, for the case has been appealed. It is a simple issue. The Supreme Court has already ruled that the State Department cannot deny a citizen a passport because of his political affiliations or associations. This question is not raised in the Worthy case. The question at issue is whether the Secretary of State may say to a reporter or any other citizen: "You may not visit the following countries * * *."

The State Department has revised its policy about American reporters going to Communist China. The Department has agreed to give passports for Red China to representatives of a number of periodicals and agencies normally dealing with Foreign news. The number has now risen to 44. But the Chinese are insisting on reciprocity—that an equal number of Chinese correspondents be permitted to enter this country. The presence of these reporters in China would be no more a peril to peace, nor more a cause of turmoil than the presence of Mr. Worthy. And the President would be just as incapable of guaranteeing their safety. So what Mr. Worthy strove for has been going on even if he goes on losing. But the principles involved in this case have not been satisfied by the revised rules for newsmen in Communist China. The State Department is still saying "No" to everybody else who wants a passport to go to the forbidden areas.

It is clear that if the present ruling stands—if it is not reversed by the Supreme Court—then this administration may continue to ban travel to certain areas of the world. This would mean that it would also be possible for any future administration to ban travel to any other part of the world. It would, for example, be possible for a future Secretary of State—whatever his reasons, or for no reason—to ban travel to Latin America, or to Italy, or to the Middle East. He could, in fact, prevent all of us from leaving the territory of the United States. What the court of appeals has said is that the President, through the Secretary of State, has the power to forbid travel

abroad. That is the court's interpretation of the Constitution. That is the law, says the court, and we can't do anything to prevent it.

It seems to this reporter that more is involved in this case than just Mr. Worthy's right to go where he pleases. His ability as a reporter is not in question. Whether he is a "blustering inquisitor" or a mild, scholarly man, has no bearing. What is most at stake is the public's right to know, not only in China but everywhere, any place at any time. A close reading of the court's ruling does not reveal any mention or recognition of this right. It is perhaps fantasy to suggest that at some future time some future Secretary of State could lock us all up in his country, could deny the right of exit, but under this ruling it could happen.

This is Ed Murrow. I'll be back in a moment with the word for today.

G. K. Chesterton once said: "I sometime think it is a pity that people travel in foreign countries—it narrows their minds so much." But Samuel Johnson was nearer the mark when he said: "The use of traveling is to regulate imagination by reality, and instead of thinking how things may be, to see them as they are."

Urban Renewal Pays Dividends

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 29, 1959

Mr. SPARKMAN. Mr. President, we have had ample evidence as to the worthwhileness of urban renewal as an investment which will return a dividend to the cities affected, and also to the Federal Government itself.

There recently appeared in the July 1959 issue of the official publication of the Alabama League of Municipalities an article entitled "Urban Renewal Pays Dividends." I ask unanimous consent to have the article printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

URBAN RENEWAL PAYS DIVIDENDS

Urban renewal should occupy a top position in any future program to make Mobile a greater, more progressive city.

Like other cities throughout the Nation, our town is swiftly expanding far out into what used to be cow pastures and woodlands, with the result that it is developing into a sprawling, loosely integrated city to accommodate a population that could double in the next quarter century.

Traffic problems which hound us now will seem minor when compared to those of 1975 unless there is instituted soon a vigorous program of renewal in the central business and blighted areas of the city.

No single group in the community can accomplish this task. It will require the cooperation of government, private capital, and numerous civic organizations.

Some may say that a program of this nature is too costly. Actually, these people have not stopped to count the costs of failure to undertake the task of urban renewal. They have not taken time to figure out what good business it is to replace blighted, deteriorating areas with up-to-date new apartment houses, homes, and business establishments. They perhaps haven't realized that the day is fast approaching when people are going to get fed up with driving long distances to the suburbs and will begin looking for housing near the central city where public transportation is accessible and convenient.

Just as sure as the clock's pendulum swings, there lies ahead today a swing away from the distant surburbs to residence in close proximity to the city's heart.

This trend, we believe, will apply as well to industries. Some big companies over the Nation that have established plants on perimeters of cities are finding these locations less advantageous than they appeared on paper. The city still provides advantages of the bigger labor pool, superior transportation facilities and closer proximity to communications and business associates.

But a program of this nature must have dynamic leadership. It needs not only planners but doers. The leadership must be forthcoming if Mobile is to meet the challenge of the future.

Peoria Journal Star Editor in Russia

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 29, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks I would like to submit herewith the fifth and sixth in a series of articles written by the editor of the Peoria Journal Star upon his return from a recent trip to Russia:

[From the Peoria Journal Star, July 24, 1959]

BEACH 'NUT' SVETLANA MEETS HER MATCH

(EDITOR'S NOTE.—Charles L. Dancey, editor of the Journal Star, returned recently from a month's tour of the Soviet Union and at present is attending a national strategy seminar in Washington, D.C. Because of heavy censorship restrictions, Dancey made no effort to send dispatches from Russia. His daily articles, however, will be carried under dateline of the areas he visited.)

(By Charles L. Dancey, editor, the Journal Star)

ODESSA.—We visited a collective farm today—obviously a model one that even had its own beach, filled with stocky people and beautiful children.

There are huge fields of grades (mostly for wine) and also other crops, many buildings, some good, some very bad, and one "palace." The name is certainly appropriate and so they call it.

The driver became very easy and jolly out in the country and Svetlana seemed very gay, which is unusual. My lighter quit, and the driver stopped the car, hopped out, pulled a jug out of the trunk and filled it with benzine.

Several times Svetlana would suddenly call out, and he would slam on the brakes and they'd leap out of the car and pick wild flowers.

In the country we passed a road gang building an asphalt road mostly by hand, with shovels. They shovel on crushed rock and then tar and then rock. Many of the workers are women.

We also passed many rickety horse-drawn carts and wagons and one old woman bent double under a load of wood on her back.

At all the beaches one sees the same statues made from the same molds, the same basic set-up for sunning and swimming.

We visited more beaches than I can count. Svetlana is a sun nut. We also went through the defense museum, where you get the full propaganda treatment but while it includes both ridiculous tilts to laud the Communists specifically, by and large the sales pitch is one of intensive nationalism, and they have groups going through constantly.

Odessa, of course, is one of the "hero" cities, where there was a long siege and bitter fighting both when the Germans took it and when it was eventually recaptured.

I walked across from the hotel, lit my pipe, and a fellow who was lighting up a cigarette looked me up and down, straight in the eye, and said "Nemyets?" (German?)

I said: "Nyet. Ya Amerikanyets."

His stern face broke into a big smile, and he said: "Horoshow." (Good.) We talked pidgin Russian for a while, and then he invited me down the street for a beer. The beer was very good. It has a touch of the solid flavor of Pabst original that is out now—the old-fashioned touch.

The kids here are crazy for pennies. I only had two. The kids all study English and while they can't speak it, they do learn the alphabet and can read laboriously.

They study the pennies intently. Did you ever look at a penny closely? That is quite a message it carries in five little words.

Another time in the park, this time with Svetlana, a gypsy came up and wanted to tell her fortune. The gypsy said something about she would be going to Moscow soon. Svetlana got very upset, and she and the gypsy barked back and forth at each other, and finally much to my surprise, Svetlana lost her command of the situation and said, "Let's go." We walked away.

The gypsy stood mimicking her, "Lez go. Lez go."

It is hard for anyone to appreciate the boldness of this gypsy, unless you have been around and seen how everyone kowtows to Intourist.

My time in Odessa is running out, and I have been advised that I may have trouble on the ship to Yalta even with simple matters, and that it can be arranged for Svetlana to accompany me to Yalta and in all my travels as a great convenience to me.

This, of course, was the original stipulation. I took the position that this came as a complete surprise to me, and that it would be scandalous to Americans for a man alone like myself to travel such a long time and over such a wide area accompanied constantly by a young woman. I suggested that I would go to Yalta alone "and see how much trouble" it would be, and if it didn't work out well, I would request a guide when I got there for the rest of the trip.

They didn't push it.

[From the Peoria Journal Star, July 25, 1959]

LAD, 11, CHERISHES STAMP WITH STATUE OF LIBERTY

(By Charles L. Dancey, editor, the Journal Star)

YALTA.—The trip by ship from Odessa to Yalta was a total loss as far as I was concerned, simply because they took such wonderfully good care of me that I didn't get to talk to anybody. It was a large seagoing ship and the first class accommodations in this "classless society" were sheer luxury—greater than that available on most "capitalist" ships. I don't know how the other half lived below docks.

I had a fancy cabin, shared with an American doctor from the University of Chicago, and there were four other Americans aboard. The rest were all "silk shirt" Soviet-type citizens, and these left us strictly alone.

But at Yalta it was much different.

Here a new guide, Natasha, showed me the "palace" where Churchill lived and where a Russian noble built a beautiful park unique for its natural, wild appearance and its tremendous size. I was told that this was barren ground, and the whole thing was synthetic from the water falls and ponds to the tumbled rocks of swarming foliage. They say it was built by the labor of thousands of serfs.

Here too was the "palace" where Stalin, Roosevelt, and Churchill met and where Roosevelt lived (because of his handicap). It is fanastic in size, luxury, art objects and architecture—also built originally by a Czarist noble.

Then we went to visit the one-time home of the great playwright, Anton Checkov. It was closed because of a holiday. Our driver, however, insisted on climbing over the high wall and going in.

The director of this house-museum came out and unlocked the great iron gate and showed me through personally—the piano where Chaliapin played for his friend, the pen and desk where Checkov wrote "The Cherry Orchard," etc.

He was especially proud that Checkov's nephew came to the United States and became a very successful movie producer—and he advised Natasha that there "are more Russians in New York than Moscow."

Back at the hotel, however, is where things really began to happen. There on the esplanade I was befriended by a melting-eyed little 11-year-old named Yuri, who spoke no English.

He wanted a souvenir from America, and I gave him a stamp which he cherished for its Statute of Liberty, and a ballpoint pen. He went away and came back with a little book containing an accordian series of pictures of Yalta. On the way back he stopped and talked to the militiaman (police officer) on the esplanade, and the officer came over, smiling, offered me a cigarette, and talked for a few minutes.

Yuri then wanted me to go swimming with him. The beach was just beyond the esplanade, and I had to explain that I had no suit yet.

The next thing I knew he took me by the hand, led me about 100 yards from our beautiful hotel and through a little gate. Now, until this time, nothing was visible but beautiful buildings against a natural mountain and ocean bay setting which no less a traveler than Mark Twain described as the most beautiful spot on earth.

Inside the gate there was a surprise. A little dirt courtyard swarming with people, and surrounded by rickety frame stairs into a series of homes.

Yuri took me up a plain, dangerous stairway, pulled aside a heavy lace-like curtain and into a neat and clean room. In the room were three cot-like beds, a small square table with four chairs and a cupboard.

A man and woman met me smiling, took a bottle of applejuice out of the cupboard and served me. We talked as best we could for a little while, and meanwhile the neighbors kept drifting in smiling, chattering and talking.

It was repeatedly told me that the one impossibility in the Soviet Union is to get inside a private home, and here I suddenly was. The people were pleasant, curious and openhearted, with much joking and gaiety. The home was very neat and clean.

Yet obviously it was a living room, dining room, bedroom and pantry for the family. I understand that kitchen and bathroom facilities are shared then by three to five families.

This fits other information as to housing conditions.

But an even more interesting experience awaited me in Yalta.

Fiftieth Anniversary of Camp Dawson, Kingwood, W. Va.

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 29, 1959

Mr. RANDOLPH. Mr. President, it was my privilege on Saturday, July 25, 1959, to participate in ceremonies commemorating the 50th anniversary of Camp Dawson, near Kingwood, W. Va. Likewise, it was Governor's Day at the half-century-old West Virginia National Guard camp in Preston County.

The official program for the occasion included an interesting, informative, and well-prepared historical background summary of Camp Dawson by Maj. William E. Miller, assistant adjutant general of West Virginia.

Following the presentation and inspection of troops and the presentation of awards to individual guardsmen and units, the Honorable Cecil H. Underwood, Governor of West Virginia, responded to his introduction by Maj. Gen. William E. Blake, State adjutant general.

In his remarks, the Governor noted that "the National Guard of West Virginia is stronger and more modern today than ever before," and he said that "the goal of our reorganization has been achieved—units having been retained in every community which had a guard unit before the reorganization." There are 35 units in 31 communities, said the Governor, and he added:

These units are the most modern in the Army structure, including special forces at Huntington. * * * As you well know, and by your efforts, Camp Dawson has been reactivated and this year is celebrating its 50th anniversary. Once again, our guard units are conducting field training within the borders of West Virginia.

Governor Underwood also commented that "the West Virginia National Guard went to field training this year only 27 men short of its authorized maximum strength," and observed that "such a record of manpower obviously indicates the high morale within our guard units and their high prestige within the State."

He also appropriately stated that during his administration he had dedicated several armories and other military facilities, and stressed a significant opinion in his remarks, addressed especially to the troops:

One point which I am gratified always to mention in these messages is the debt owed by the guard and the State of West Virginia to the local communities for their support and encouragement of guard activities. All of you guardmen know just how essential such public endorsement is. It contributes to the manpower of our units and to the atmosphere conducive for their military effectiveness. I am sure that you are grateful for the personal support which each of you has received and for the general enthusiastic reception accorded the National Guard. * * * Cooperation is a two-way process; it requires giving and taking by both parties. West Virginia has given its National Guard her support; * * * you have given West Virginia an effective military organization.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD in connection with these comments and quotations a partial review of the historical background of Camp Dawson by Major Miller to which I referred earlier.

HISTORICAL BACKGROUND—CAMP DAWSON
(By Maj. William E. Miller, assistant adjutant general)

For over 200 years the Cheat River bottom land, on which Camp Dawson is located, was known as Dunkard Bottom. It was so called by three brothers named Eckerlin, who settled there near the outbreak of the French and Indian Wars. They were members of the Dunkard faith, or Church of the Brethren.

In about 1756, this frontier settlement was raided by Indians under the leadership of a French officer. Two of the Eckerlin brothers were captured, while the third was at Fort Pleasant, in Hardy County, trading furs.

After the close of hostilities in 1763, the bottom land was without settlers until about 1776, although the great Indian war trail, a west to east path, crossed the river opposite the mouth of Morgan's Run, traversing the entire length of the camp along the river. A few miles downstream the path turned eastward across the mountains. This path was used by white settlers who journeyed eastward during the Revolutionary War.

In 1784, George Washington planned to use Dunkard Bottom as the overland portage terminal for a canal to connect the East and West via the Potomac River, Cheat River, and Monongalia River. A few years later, the historic Winchester-Clarksburg Pike crossed the river at this point. A ferry operated there for many years, until the present Caddell Bridge was built by the Preston County court in 1906–7.

After the War of 1812, a company of men were discharged from service at Dunkard Bottom, and during the Civil War various details of men of the 6th West Virginia Volunteer Infantry camped on the present site of Camp Dawson.

On May 7, 1909, a tract of 196½ acres was purchased by the State of West Virginia on Cheat River, in Preston County, for use as a State military camp.

It was named "Camp Dawson" in honor of former Gov. William M. O. Dawson, a native of Preston County, who served from 1905 to 1908 as the 12th chief executive of West Virginia. The naming of the camp was announced by Brig. Gen. Noyes S. Burlew, the adjutant general, in General Order No. 17, dated June 22, 1909, Adjutant General's Department, State of West Virginia.

The sum of $10,000 was paid to Florence V. Elliott, her husband, Felix, and Rupert E. Vickery, for the Dunkard Bottom site, which is located approximately 4 miles southeast of the town of Kingwood. The purchase was authorized by the State legislature.

Troops of the 1st Infantry, West Virginia National Guard, trained on the site during the summer of 1909, while under command of Col. Harry R. Smith. Battalion size units of the 1st Infantry Regiment trained from July 7 through August 4, 1911, and again in 1913 from July 6 to 26, inclusive. The West Virginia State rifle team also held a 4-day training period during July 27 to 30, 1913, prior to the national matches.

In 1914, both the 1st and 2d Infantry Regiments trained at Camp Dawson, in conjunction with Regular Army troops.

During World War I there was no activity at Camp Dawson, and the camp was abandoned as a training area until 1928, when

Gov. William G. Conley appointed Carleton C. Pierce, of Kingwood, Preston County, as the adjutant general, and Governor Conley agreed to reestablish Camp Dawson as a training center.

In 1929, the 201st Infantry Regiment, commanded by Col. Earl Smith, of Fairmont, held summer training at Camp Dawson. The following year (1930) Col. Charles G. Robison, of Morgantown, was commander of the 201st Regiment, and returned with his troop to Camp Dawson for summer maneuvers.

For the next 5 years, 1931 through 1935, the 201st Infantry Regiment held their training at Camp Dawson during the summer months. In 1936 the troops trained at Fort Knox, Ky. The following three summers, 1937, 1938, and 1939, the troops returned to Camp Dawson for training.

Camp McCoy, Wis., was the site of training for the 201st Infantry Regiment from August 11–31, 1940. Less than 6 months later, on January 6, 1941, the 201st was inducted into active Federal service at Fort Benjamin Harrison, Ind., for service during World War II.

It was not until 1945–46 that Camp Dawson was used again as a training area. The 1st and 2d Regiments of the State Guard held their final training prior to inactivation during August 5–19, 1945, and from July 21–28, 1946. Col. Michael Y. Heath, Jr., of Fairmont, was commander of the 1st Regiment, and Col. Paul V. Myer, of Charleston, commanded the 2d Regiment during this period.

With the reorganization of the West Virgina National Guard following World War II, range firing was held at Camp Dawson by individual companies during 1947 on weekends. Since the National Guard had been reorganized into one regiment in 20 cities, with several additional separate batallions, Camp Dawson was no longer large enough, nor were the required training facilities available to support a summertime encampment of the entire West Virginia National Guard. The first postwar training for troops was held at Fort Knox, Ky., from July 21 through August 8, 1948. During the next 10 years, Camp Dawson was used exclusively for weekend range firing, and in addition became the home station of Service Battery, 201st Armored Field Artillery Battalion, which was activated on June 5, 1947, and has been a continuous unit at Camp Dawson since that time.

Since the original purchase in 1909, two additional tracts of land have been purchased by the State of West Virginia. On June 14, 1932, 1.43 acres were purchased from Felix Elliott for the sum of $500, and 235.57 acres were purchased during July 1945, also from Felix Elliott, for $8,500. This brought the total acreage of Camp Dawson to 434.5 acres.

During World War II, Camp Dawson was leased by the U.S. Government for $1 per annum, effective August 1, 1942, for the purpose of establishing an Italian prisoner-of-war camp. During this period, one Interior Military Police Battalion and two Interior Military Police companies, U.S. Army, were stationed at Camp Dawson. The site was returned to State control on September 1, 1944.

In order to further develop the facilities of Camp Dawson as a training site, plans for training at least part of the West Virginia National Guard there annually were developed by Maj. Gen. William E. Blake, the present Adjutant General. The original plan was presented initially to the Chief, National Guard Bureau, Department of the Army, in 1957. The Bureau approved the plan, and in the summer of 1958 the 1092d Engineer Battalion (C) (A), veterans of Korea, whose homes were in the vicinity of Parkersburg and Salem, came to Camp Dawson for their traditional 15-day summer training. They established a large lake, built additional roadways, range facilities and did general repairs to the camp. Preliminary plans for the construction of a new one-unit Armory and Motor Vehicle Storage Building, at a cost of $223,600, are now awaiting final approval in Washington, D.C. Martens Associates, architects of Charleston, W. Va., are designing the buildings.

Summertime activity during 1959 will include a 15-day training period for the 1092d Engineer Battalion, of Parkersburg and Salem; State Headquarters and Headquarters Detachment, of Charleston and Point Pleasant; the 130th Ordnance Company (DAS) of Williamson, and the 249th Army Band, of Fairmont. In addition, the first and second classes of the West Virginia Military Academy (officer candidate school), will be at Camp Dawson during the period July 19 through August 2, 1959.

It is particularly fitting that the tempo of activity be increased during this 50th anniversary of Camp Dawson on Dunkard Bottom.

Cuba: Bastion of Infiltration?

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 29, 1959

Mr. FLOOD. Mr. Speaker, in an address to the House on July 7, 1959, I emphasized the threatening situation now developing in the Caribbean area as constituting a challenge to the Monroe Doctrine. Did I overemphasize the processes of penetration and infiltration by which these threats were created? Far from it. Instead, they were rather understated.

As further documentation on the Caribbean question, I quote a news story summary of recent testimony by the former chief of the Cuban Air Force before the U.S. Senate Subcommittee on Internal Security as published in the July 18, 1959, issue of the Tablet of Brooklyn, N.Y.:

FORMER AID SAYS PREMIER CASTRO IS A COMMUNIST—CHARGES MANY OFFICIALS OF CUBAN REGIME ARE ACTIVE IN RED CONSPIRACY—AGAINST ALL RELIGION—FORMER CHIEF OF CUBAN AIR FORCE TESTIFIES BEFORE THE SENATE SUBCOMMITTEE

WASHINGTON.—The former chief of Cuban Premier Fidel Castro's air force charged here that Castro and leading members of his regime are Communists.

Maj. Pedro Luis Diaz Lanz told the Senate Internal Security Subcommittee that the Castro regime is attempting to turn Cuba into a base for Communist activity in Latin America.

NAMES RAUL CASTRO, GUEVARA

Major Diaz, who fled Cuba secretly June 29, identified Premier Castro, his brother Raul, commander in chief of Cuban armed forces, Ernesto "Che" Guevara, an intimate of the Castro brothers, and other high ranking government and armed forces officials as members of the international Communist conspiracy.

Major Diaz' testimony was interrupted minutes after it had begun by an announcement from subcommittee chairman Senator JAMES O. EASTLAND, of Mississippi, that a very reliable source had warned him that an attempt will be made to injure the witness and his party.

Senator EASTLAND ordered the hearing room cleared for 40 minutes, while police and hastily summoned Army Ordnance experts searched the room for a bomb. They found nothing.

When the hearing resumed, Major Diaz told the subcommittee that he originally joined the Castro revolution late in 1956, "because I believed he would bring back freedom to my country." Instead, he added, "he brought Communists to my country."

Major Diaz, a handsome, 32-year-old man with an actor's profile, was accompanied by his attractive wife, Tania, and his half-brother, Sergio Diaz Brull, who served occasionally as the major's translator when his English failed him.

Major Diaz said the three of them had fled from Cuba with a fourth man in a sailboat chartered by Mr. Diaz Brull. The major's whereabouts in this country were kept secret prior to the hearing. However, informants let it be known that the Internal Security Subcommittee had heard him at least once—and possibly oftener—in secret session before scheduling the public hearings.

SUSPICIONS BEGAN IN JANUARY

The witness said he had been a copilot with a Cuban commercial airline for 5 years before joining the Castro movement. During the revolution his principal assignment was to fly guns and ammunition to the Castro forces.

He said he first began to suspect that Castro and those close to him were Communists early in January, when the Cuban Premier refused in radio and television broadcasts to "attack Communists." Subsequent words and actions by Premier Castro confirmed his suspicions, he declared.

He stated that he had heard Castro say in private that he plans to establish in Cuba an even more thoroughly communistic system than that of the Soviet Union.

He said Castro once told him regarding his projected agrarian reform, that he would first seize the land of supporters of ousted dictator Fulgencio Batista, and then "I'm going to take the land of everybody." On another occasion, he said, Castro stated that "some day the banks will disappear."

Major Diaz asserted that Communist members of the deposed Batista regime had been installed in his government by Premier Castro. He gave a long list of names of alleged Communists who have been given important posts in the government and the armed forces by the Premier and his brother Raul.

Leading Communists in Cuba, he said, include Augusto Martinez, Minister of Defense, Armando Hart, Minister of Educaton, David Salvador, a prominent labor leader, and Raul Castro's wife.

CALLS REGIME ANTIRELIGIOUS

Describing himself as a practicing Catholic, Major Diaz branded the Castro regime as antireligious. He said the word "God" had been removed from the new Cuban constitution because communism does not agree with the church—with religion." Major Diaz said Premier Castor had publicly avoided answering questions on this point.

The major said political indoctrination schools for the armed forces established by the Castro government had been infiltrated by Communists. He said that at one of these schools the recent Hollywood film "The Defiant Ones," whose theme is racial discrimination, was exhibited to those attending. Afterward, he said, the teacher in charge of the class gave a lecture in which he said the movie gave a typical picture of race relations in the United States.

Major Diaz charged that anti-U.S. propaganda is being distributed freely in Cuba by the government. Premier Castro often refers in public addresses to "imperialist Yankees" and warns that the nation may someday have to defend itself against invading U.S. Marines, he said.

The witness stated that numerous Soviet agents have arrived in Cuba since the Castro regime took power. He said he believes the government is getting "some sort of scientific help" from the Soviets.

Major Diaz said the Red Star, a Communist symbol, is being painted on all Cuban military vehicles. He charged that the government is distributing arms to Communists. On May Day of this year, he said, he saw Raul Castro give the Communist clenched fist salute to a group of armed workers in a parade.

As chief of the Cuban air force, Major Diaz said, he accompanied Premier Castro when he visited Venezuela earlier this year, shortly after coming to power. During the visit, the Premier had a conference of "close to 2 hours" with Gustavo Machado, head of the Venezuelan Communist Party, he declared.

RUSSIAN SUBMARINE

Major Diaz said he had been told by a friend that during the revolution an unidentified submarine appeared off the coast of Cuba's Oriente Province, where the revolutionary forces were directed by Raul Castro. Observers said the crew of the submarine were speaking an unidentified language which sounded like Russian.

The major said it is his opinion that the submarine was carrying arms for Raul Castro and his troops. Raul Castro's forces did not get many supplies from the usual sources, he declared, but "he had a lot of men and weapons—I don't know from where."

He added that other Russian agents have taken many photographs of Cuban textile industries in Matanza Province. On one occasion, he said, two Russian agents appeared in Santiago wearing Castro uniforms. They were placed in jail, but were freed at the Premier's orders.

Members of the subcommittee pointed out to Major Diaz that since this flight from Cuba, he has been called a traitor by Cuban officials, incluuding Premier Castro, and has been accused of being merely a disgruntled "soldier of fortune" who fell out with the regime after being demoted for inefficiency.

However, Major Diaz denied that he had ever been a soldier of fortune, or had been engaged in smuggling arms to Latin American revolutionaries before joining the Castro movement.

He also denied published reports that he recently crashed in a Cuban swamp after recklessly taking off in an ungassed airplane. He said the crash took place while he was piloting a helicopter, and was the result of a mechanical failure.

As for Premier Castro's charges that he is a traitor, the major said, "my conscience is clear. I believe he is the traitor, not me." During the revolution, he said, Castro promised the Nation democracy, but now "he has given Communists the control of the country."

He described the accusations made against him as typical Communist smear tactics, designed to "destroy the reputation of a man who is against them." He said Premier Castro uses similar tactics to control the Cuban press, by charging that newspapers which oppose him are actually taking money from the former dictator Batista.

Herbert G. Klein Vice President Nixon's New Special Assistant

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to bring to the attention of my colleagues a press release issued concerning Mr. Herbert G. Klein, the new press assistant to Vice President NIXON:

NIXON TRIP IS FIRST TEST FOR NEW PRESS AID KLEIN

(By Alan Masters)

WASHINGTON, July 20.—For a revealing glimpse of what White House press policies may be after 1960, keep an eye on Herbert G. Klein.

In Washington less than a month, the newly named special assistant to Vice President RICHARD M. NIXON already is up to his eyebrows in one of the roughest assignments ever to face a high-level press officer.

This month Klein is shepherding 60-odd reporters behind the Iron Curtain to cover NIXON'S travels in the Soviet Union. Even Presidential Press Secretary Jim Hagerty hasn't had to cope with that one.

The trip comes at a tense period in East-West relations. Its measure of success and the tone of its press coverage will be pivotal in the Vice President's career.

No one doubts that boyish, 41-year-old Klein, known to reporters as able and astute, will be NIXON'S press secretary if the Vice President succeeds to the White House.

On leave from his job as editor of the San Diego Union, Klein has complete authority to speak for the second highest official in the United States.

He is much more, however, than a conduit of information. High professional competence and 13 years of friendship with NIXON entitle Klein to his rank as a top policy adviser.

Nevertheless, he insists on viewing his job as a newspaperman:

"My objective is to get news out accurately and honestly," Klein says. "I can save time all around because I know the Vice President well enough to anticipate many of his reactions. I'm lucky because he understands my problems completely."

In his Washington office Klein is separated from another staffer by a Jerry-built partition. He occupies a room adjoining NIXON'S suite in the Senate Office Building, and the freshly painted walls are hung with souvenir gavels and cartoons of the Vice President. When he returns from Russia Klein hopes to have a news ticker beside his littered desk.

MET NIXON IN 1946

As a political reporter for the Alhambra (Calif.) Post-Advocate, Klein first met NIXON in 1946 when he covered the young Whittier lawyer's first race for the House of Representatives. Both men were Navy veterans and Klein still holds a commander's Reserve commission.

A warm friendship developed as NIXON'S political star rose and Klein moved up in the world of journalism. His newspaper career was checkered with leaves of absence for Nixon campaigns.

In 1952 Klein directed publicity for the Eisenhower-Nixon campaign in southern California. In 1956 he served as NIXON'S assistant press secretary. Again in the 1958 whirlwind tour which sped the Nixon caravan as far as Alaska, Klein went along as press secretary.

His relaxed look, reporters have learned, is just a look. Klein thinks and acts fast in a crisis.

In 1956, for example, he ran a Florida hotel for 2 hours. Clerks had carelessly given out two sets of keys. When the press plane disgorged a load of tired, irritable reporters, slotted in mixed-up hotel rooms, there was bedlam. The manager simply threw up his hands.

Klein took over the desk, redistributed keys, took in laundry, and gave out mail. His thoughtfulness shows in his refusal to tell the name of the hotel. "Wouldn't want to hurt their business," he says.

If Herb Klein moves into the White House with his boss, he'll be no Jim Hagerty.

Temperamentally the men are opposites—Hagerty's temper trigger sharp, Klein's disposition even.

Klein in the White House probably would not exercise the type of backstage authority Hagerty is credited with wielding. NIXON listens to his staff, relies heavily on them, but in the end makes his own decisions.

A reporter for a rival California paper called Klein the "best man any candidate in any party could have. He gives the press what they want, from sharpening pencils to providing important story background, at the same time doing right by his boss. Herb has tact, patience, never panics, or gets nervous."

So far Klein has kept his working day to a hectic 10 hours, spending most evenings with his wife Marjorie, their daughters, 13-year-old Joanne and 10-year-old Patricia, and Pat's pet hamster. He has one big complaint: There's no place in Washington for his favorite sport—skin diving.

Atlantic Air Rivalry

EXTENSION OF REMARKS

OF

HON. JOHN JARMAN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1959

Mr. JARMAN. Mr. Speaker, on July 16, several of my colleagues and I joined in urging the establishment of a merchant marine of the air. This was based on many factors. Principal among them being the increasingly strong competition for our transatlantic airlines from government-owned and highly subsidized foreign carriers.

Mr. Speaker, the New York Times of July 27 carries a most illuminating article written by Mr. George Horne which reemphasizes several of the points my colleagues and I made on July 16, plus introducing several most interesting additional facts of his own.

An example of how the U.S.-flag carriers share of transatlantic air traffic is deteriorating is Mr. Horne's statement that Pan American World Airways, despite the introduction in 1958 of jet service last fall, carried only 26.4 percent of transatlantic travel during 1958. Despite the fact that Pan American's jets are now operating more than four round-trips daily between the United States and Europe, Pan American's share of passenger business during the first 3 months of this year was only 32.3 percent. The figures applicable to TWA are even more striking. In 1953 TWA carried 24 percent of all transatlantic air business in both directions but in the first quarter of 1959 TWA's share of the total air passenger business was down to 11 percent.

Mr. Speaker, it is no wolf cry which threatens TWA and Pan American across the North Atlantic. It is rough, tough, coldblooded competition which the foreign carriers are providing. It is additionally unfortunate, as Mr. Horne points out, that some of our State Department officials seem to feel that they have obligations to give our foreign competitors

choice routes throughout the United States while asking or expecting very little in return.

Mr. Speaker, Mr. Horne has apparently done an outstanding research job. His accumulated facts and his most interesting figures should be brought to the attention of every Member of this body. Under leave to extend and revise my remarks in the RECORD, I include Mr. Horne's article "Atlantic Air Rivalry Up," from the New York Times of July 27:

ATLANTIC AIR RIVALRY UP—PAN AMERICAN AND TRANS WORLD WARN OF TRAFFIC GAINS BY FOREIGN CARRIERS

(By George Horne)

Foreign carriers on Atlantic air routes are steadily nibbling at the share of U.S.-flag airlines in this major travelarea. Although the bulk of transatlantic air travel is American, foreign competition is on the increase, and future prospects are that it will take more and more of the business, according to executives of the two American companies, Pan American World Airways and Trans World Airlines.

In 1958 the percentages of U.S.-flag carrying relative to total transatlantic volume reached a 5-year low. Pan American, in the years up to 1958, had carried from 30.5 to 32 percent of the total Atlantic traffic, but it was down to 26.4 percent last year.

The introduction of jets on Pan American services late last year and in the first months of 1959 helped the line maintain its position. However, despite the fact that the jets carried better than 91 percent of capacity, the line's share of carryings during the first quarter of this year was only 32.3 percent.

Trans World Airlines, in the first quarter of the year, carried 11 percent of the traffic on scheduled airlines. This line carried 24 percent in 1953 and has won a declining share each year, with 18.1 percent in 1957 and 15.2 percent in 1958.

ALARMING FACTORS CITED

Both airline concerns believe that several alarming factors will make the next few years a period of crisis for the air-transport industry. They are:

Indications that existing foreign airlines will make every effort to strengthen their competitive positions on the lucrative Atlantic routes.

The definite possibility that the Soviet Union's swift rise in commercial air power will make itself felt over the Atlantic.

The continuing policy of the Civil Aeronautics Board and the Department of State in granting liberal route rights in this country to foreign airlines.

Last year, not counting traffic to and from Canadian airports, the Atlantic lines handled more than 1 million passengers. Approximately 80 percent of these travelers were American citizens. The total traffic figure will be higher this year, by all indications.

As an example of what the foreign-flag lines are gaining in this reservoir of traffic, the companies reported that the British Overseas Airways Corp. in the first quarter of this year took 13.6 percent of the transatlantic business, surpassing Trans World for the first time.

TO SPUR SALES EFFORT

B.O.A.C., it is noted, was flying jets in this period, and Trans World will not get its jets until later this year. However, nine foreign-flag carriers will be flying the business-getting turbine equipment by the spring of next year and are expected to increase their share of traffic.

The American lines are planning to intensify foreign sales efforts to offset the successful drive of foreign competition. Trans World, for instance, has established a new international sales development division to be headed by Richard Mazzarini, as vice president. He has had extensive experience abroad. The line is also bringing home several foreign area sales managers to map new sales tactics here.

Both lines consider it quite likely that the Soviet will enter the transatlantic trades before long with the new turbo-propeller TU-114. This plane, which recently flew from Moscow to New York in 11 hours, may be a dangerous competitor and, as one executive put it, "a major weapon in the economic cold war."

On the subject of handling foreign applications for flying rights in this country, the airlines contend it is the apparent policy of this country to grant foreigners anything they ask at the expense of American flag lines.

Thirteen foreign lines now operate to seven U.S. cities. Some have additional rights through the United States to Latin America and the Orient. Under bilateral air agreements, of course, American lines have equal rights to enter foreign nations. But the markets at this end and at the foreign ends of the routes are vastly different.

IMBALANCE IS NOTED

As an example, Air France serves Chicago, Boston, and New York, with combined populations of more than 12 million. The opposite line, Pan American, serves Paris and Nice, with a combined population of some 3 million.

This imbalance is true of other lines, such as KLM, Lufthansa, B.O.A.C., and Irish Airlines, which may tap a far greater market in this country than the markets offered to American carriers in their countries.

The official Federal policy in granting foreign airline rights here has been a major factor in the deterioration of the position of this country's airlines in foreign trade, in the opinion of Pan American and Trans World officials.

Behind the official U.S. support policy for air development is the acceptance of a strong civil air arm as a necessary "merchant marine of the air." Apart from its role in serving industry and commerce, its planes and men afford an available reserve in time of emergency.

The question the airlines raise is: Where will this reserve be if competition continues to dilute the trade on which it must live?

United States Is Prodded on Civil Defense

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1959

Mr. HOLIFIELD. Mr. Speaker, under law to extend my remarks, I include a news article from the July 28 issue of the New York Times in the Appendix of the RECORD, following my brief remarks.

There is a growing realization that the problem of civil defense in the nuclear age is of pressing importance to the survival of our Nation. The civil defense committee of the National Association of County Officials meeting in Detroit on July 27 passed a resolution containing a 17-point program calling on the Federal Government to assume its constitutional responsibility to protect the civilian population from enemy attack in the event of a nuclear war.

The article follows:

UNITED STATES IS PRODDED ON CIVIL DEFENSE—CONVENTION OF COUNTY AIDES SCHEDULES CALL FOR NEW FEDERAL DEPARTMENT

(By Clayton Knowles)

DETROIT, July 27.—The National Association of County Officials began applying pressure today to get more forceful Federal action on civil defense.

Meeting here 1,800 strong, the organization mapped a program that calls on Washington to provide more in the way of leadership, educational effort and money for protection against nuclear attack.

The 17-point program urges establishment of a full-fledged Department of Civil Defense. The agency would cooperate with but be entirely separate from the military Defense Establishment.

The resolution embodying the program conceded that all levels of government have a role to play in civil defense but that the National Government should provide leadership and the Congress should provide adequate funds to carry out the duty of the Federal Government to provide this leadership.

FULL APPROVAL ASSURED

The resolution, framed by the association's civil defense committee, was quickly approved in committee and is assured passage by the convention Wednesday.

The program asks speedy implementation of a national defense shelter program. It calls for construction of 100 prototype shelters across the Nation and incorporation of shelters in all new Federal buildings.

Elliott R. Jackson, civil defense committee chairman, had praise for Governor Rockefeller, of New York, saying that he had "pumped new life into the civil defense effort and won thousands of friends all across the country."

Mr. Jackson, who is civil defense director of the Atlanta, metropolitan area, added: "If that Rockefeller gets a compulsory program through in New York the whole Nation will sit up, because he studied the situation and he's Governor of our biggest State."

Mr. Jackson declared that the Federal program up to this point had not even scratched the surface.

The committee action came after the convention had heard Gunnar Lannaeus, cultural attaché at the Swedish Embassy in Washington, tell about Sweden's $180 million 10-year program of public shelter construction. The program was initiated last month.

SCOPE OF SHELTER PLANS

Mr. Lannaeus emphasized that the accent still was on evacuation of cities, but that, under the program, public shelters would be built in every city of 50,000 or more. All shelters will have peacetime uses, some as factories and some as garages or other service facilities.

Mr. Lannaeus reported that Stockholm already had four huge shelters, but that they would accommodate only 50,000 of the city's 750,000 population. These shelters, he said, are for those who in an attack must stay at essential jobs or serve in civil defense and salvage work.

He said that the public program supplemented a 1945 program that required private enterprise to incorporate shelters in all multi-family housing and office buildings.

The convention was welcomed by Gov. G. Mennen Williams and by Mayor Louis C. Miriani, Edward Connor, Wayne County supervisor, and other local officials.

Senator ALBERT GORE, Democrat, of Tennessee, declared in a speech that efforts toward nuclear disarmament should be con-

tinued, but he urged that, regardless of the political climate of the hour, any pact in the field contain provision for both inspection and enforcement.

"You cannot rely on a Russian promise," he said.

Statement of President Clarence N. Sayen, Air Line Pilots Association, on Legislation To Prohibit Liquor Service Aboard Airplanes

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the very interesting statement of Mr. Clarence N. Sayen, president of the Air Line Pilots Association, before the House Interstate and Foreign Commerce Committee on the bills to prohibit the serving or consumption of alcoholic beverages on aircraft engaged in domestic air transportation:

STATEMENT OF CLARENCE N. SAYEN, PRESIDENT, AIR LINE PILOTS ASSOCIATION, INTERNATIONAL, BEFORE THE HOUSE OF REPRESENTATIVES INTERSTATE AND FOREIGN COMMERCE COMMITTEE, SUBCOMMITTEE ON TRANSPORTATION AND AVIATION, ON H.R. 1075 AND RELATED BILLS

My name is Clarence N. Sayen. I am president of the Air Line Pilots Association, International. We are pleased to have the opportunity to appear in support of H.R. 1075 and related bills which would prohibit the serving or consumption of alcoholic beverages on aircraft engaged in domestic air transportation. A statement of my qualifications is attached hereto.

We were privileged to appear before this committee in support of similar legislation then pending in the 84th Congress, 2d session and we are pleased that the committee and the House of Representatives acted favorably on it. Most of what we had to say in favor of this legislation at that time is still applicable. If this statement, therefore, appears familiar to some of the members of the committee it is because, in our view, the same arguments which have persuaded us to strongly support this legislation for the past several years are applicable today. This legislation was originally introduced in the Congress when a few airlines began to sell or give alcoholic beverages to their passengers during flight. The real or imagined competitive pressure of this action by a few carriers caused other airlines to also begin the practice; when we testified on this legislation a few years ago the number had grown to eight airlines who were either selling or giving alcoholic beverages to their passengers on some of their flights. This number, we believe has now expanded to 12 carriers, 7 of whom sell liquor to passengers and 5 who provide it without charge. This practice, of course, has also spread to additional routes.

In 1957 this legislation was viewed and considered in light of the various aircraft then in use in air commerce. Those transports weighed less than 140,000 pounds, carried only 60 to 85 passengers, at speeds not much in excess of 300 miles per hour, and at altitudes up to 22,000 feet. Present-day jet aircraft transport passengers at speeds in excess of 500 miles per hour and at altitudes up to 35,000 feet. They cost over $5 million, weigh up to 300,000 pounds, and carry as many as 112 passengers. In the near future, similar aircraft will be transporting as many as 179 passengers at even greater speeds and higher altitudes. The problems of handling large numbers of people of diverse personalities in a confined space have thus been magnified, the dangers of emergency decompression at the higher altitudes enhanced, the risk in unscheduled landings to unload an inebriated, sick, or emotional passenger has grown. The time of the crew in these high-speed, complex aircraft is occupied with flight duties and should not be spent playing nursemaid to inebriated passengers.

We are not supporting this legislation in any attempt to endorse an overall prohibition against the consumption of alcoholic beverages or a feeling of responsibility to regulate the personal habits of air travelers. The interest of the airline pilot in regulation or legislation that would curtail the consumption of alcoholic beverages on aircraft while in flight stems from three primary areas of concern:

1. The compromise with safety introduced on board the aircraft.

2. The additional burden imposed upon the pilot who must bear the ultimate responsibility for the safe and honorable conduct of his passengers while at the same time operate his aircraft safely.

3. The assumption of responsibility for the maintenance of order and harmony and for safe conduct among passengers permitted to consume alcoholic beverages.

We will discuss these three points in order.

1. Compromise with safety. There is little doubt that the unregulated consumption of alcoholic beverages by passengers in aircraft constitutes a compromise with safety. When an aircraft leaves the ground for flight with a load of passengers it contains a large group of people of diverse backgrounds, physical capacities, experience, and habits, sealed in a metal tube in close proximity to each other and with no avenue of escape except when the aircraft is again brought to earth. Some of the passengers may have overcome any apprehension about flying and be completely relaxed in this mode of travel. Others may be under considerable nervous tension and be repressing anxieties and fears. Some may have a capacity for a considerable consumption of alcohol with no effect. Others may react suddenly to small quantities of alcohol. There is no way of knowing what the reaction of any individual passenger will be prior to the beginning of the flight.

There are many things that an irresponsible or intoxicated person can do in an aircraft that may endanger the flight or other passengers. One of the greatest fears of all pilots is fire in flight. The careless use of cigarettes or matches by an inebriated passenger may be a source of fire. It is extremely difficult for one or two cabin attendants to completely monitor as many as 100 passengers in one aircraft. An apprehensive passenger relieved of his inhibitions by alcohol and panic stricken through some in-flight emergency may attempt to enter the cockpit and interfere with the operation of the aircraft by the flight crew or with delicate instruments or radio necessary to the conduct of the flight.

In the event of an emergency in flight, survival of the passengers is often dependant upon their good judgment, alertness and cooperation with the crew members and other passengers. No pilot contemplates with pleasure forced evacuation or ditching of an aircraft with a load of passengers who may be even slightly under the influence of alcohol.

2. Additional burdens placed on the pilot. The operation of a large and complex modern transport aircraft occupies all of the attention of the flight crew. Under instrument operation in complex traffic areas, in adverse weather or other difficult flight situations, the flight crew's time is fully occupied. However, in addition to the responsibility for the operation of the aircraft, the pilot must also assume the ultimate responsibility for the safe and orderly conduct of his passengers. If a safety or social situation arises among the passengers which may jeopardize continuance of the flight or cause discomfort to the passengers, the final recourse of the cabin attendants is to request the captain to come out of the flight deck to maintain order or remedy the situation. It is then necessary that the pilot take whatever measures are necessary for the safety of the flight and welfare of his passengers. This may include drastic measures if necessary. There have been instances where it has been necessary for the pilot to physically subdue passengers. Had the pilot been injured, the flight would be deprived of his services and an emergency created.

There is little doubt that the consumption of alcoholic beverages by passengers has increased the frequency with which situations requiring the attention of the flight crew in the passenger cabin is required. To this extent the social problem engendered as the result of the consumption of alcoholic beverages on board aircraft takes the pilot away from his duties and may become a safety problem.

3. Responsibility of the pilot. As previously stated, the pilot of an aircraft bears the ultimate responsibility for the safe operation of his aircraft and the safe conduct of his passengers. If passengers are to be permitted to consume alcoholic beverages in flight, the pilot must assume the responsibility for coping with any hazard created or the consequences of his actions taken to maintain order, alleviate a social situation which may arise, or eliminate a hazard.

If a passenger under the influence of alcohol becomes dangerous to other passengers on board an aircraft, it is the responsibility of the pilot to bring the dangerous situation under control. This may require drastic measures including bodily harm to the uncontrollable passenger.

Part 40.351(c) of the Civil Air Regulations provides:

"Responsibility of pilot in command: The pilot in command shall during flight time be in command of the airplane and crew and shall be responsible for the safety of the passengers, crew members, cargo, and airplane."

In addition, the Civil Air Regulations provide—

"Use of liquor, narcotics, and drugs. A pilot shall not permit any person to be carried in the aircraft who is obviously under the influence of intoxicating liquor or drugs, except a medical patient under proper care or in case of an emergency."

This regulation places the responsibility on the pilot for not carrying individuals under the influence of alcohol. For many years, pilots have carried out their responsibility to refuse to carry passengers who are under the influence of alcohol under the impression that this was their responsibility and they were enhancing the safety of air transportation. However, it is impractical to prevent passengers who have been drinking from boarding the aircraft when it is the intent to make alcohol available to them after they come aboard. It is difficult to prevent passengers from bringing alcohol aboard aircraft when the airline furnishes the accessories for their drinking during flight. The sum total of this situation appears to be that the airlines are willing to interpret the foregoing regulations in such manner as to permit drinking aboard aircraft so that individuals may come under the influence of intoxicating liquor. The responsibility for maintaining order and carrying out a safe operation despite this compromise is placed on the pilot.

The association is skeptical that the pilot can effectively carry out all of his responsibilities if the additional problems created by permitting the consumption of alcohol aboard aircraft are added to them; therefore, the air line pilot has been reluctant to assume, in addition to all of his other responsibilities as an aircraft commander, the responsibility of being the guardian of a group of passengers under various flight conditions who are permitted to consume alcohol.

An airline pilot, in the course of completing a day's flight assignment, may cross the boundaries of many States. Laws vary from State to State. For example, some States prohibit the sale of alcohol as do parts of some States. In many instances, the pilot is not certain whether the dispensation of alcohol on his aircraft is legal in the particular airspace which he is occupying as of the moment. In addition, we may have a situation where a pilot who lives in New York State is flying an airplane owned by a Delaware corporation over the State of Ohio and find it necessary to take drastic action against a passenger from California. It is the opinion of the association that the consumption of alcohol aboard aircraft, if permitted to continue, necessitates a very clear enunciation of the legal authority and responsibilities of the pilot in dealing with passenger problems under the various legal jurisdictions through which he must operate. This has not been accomplished to date either nationally or internationally.

All of these problems were considered by the board of directors of the Air Line Pilots Association at their 13th convention in November 1954. Such consideration resulted in the adoption of a resolution which reads as follows:

"The Air Line Pilots Association is opposed to the serving of alcoholic beverages aboard aircraft, the providing of setups aboard aircraft, or any other practices which will encourage drinking alcoholic beverages on board aircraft."

When the airlines first began serving alcoholic beverages to passengers on domestic flights, the association called these problems to the attention of the Civil Aeronautics Board and the Air Transport Association and urged that the industry take voluntary action to terminate or regulate this practice. This correspondence, addressed on August 27, 1954, pointed out that in the opinion of the association the service of alcoholic beverages is not in the best interests of the air transportation business for many reasons, among which are:

1. It is a compromise with safety by creating an additional hazard on board aircraft.

2. Intoxicated passengers create embarrassing situations on board aircraft which discourage people from flying. It is not a comforting thought to be strapped in your seat next to an inebriate for many hours.

3. A competitive situation is being created under which airlines are being forced either to serve liquor on board aircraft or to provide setups for people who bring their own liquor.

4. In some instances, Federal subsidy moneys are being expended for these purposes.

We expressed the hope that the air carriers might solve this problem among themselves and urged that such action be taken as soon as possible to prevent competition from causing the serving of alcoholic beverages becoming widespread on all air lines. It is our understanding that the Air Transport Association did attempt to limit the service of alcoholic beverages on board aircraft by its members and has adopted an industry code. However, to the best of our knowledge, no effective agreement has been reached to date that would eliminate the serving of alcoholic beverages on board aircraft. Air carriers continue to utilize liquor service as an enticement to air travelers. This is regrettable since, in our opinion, it would be a constructive demonstration of self-discipline in the public interest if the air transportation industry could voluntarily abolish the undesirable practice. However, we are very skeptical that this can be attained.

We do not believe that the majority of air carriers favor the sale or service of alcoholic beverages on board their aircraft and, on the contrary, are fearful that the spread of the practice as a competitive device will force them to adopt it against their better judgment. To the best of our knowledge, 12 carriers now sell or serve alcoholic beverages in domestic air transportation on some of their routes at the present time. Of these 12, 7 sell liquor to passengers and 5 provide it without charge. The remainder of the carriers have resisted the practice even though placed under competitive pressure. We are convinced that the spread of the practice has resulted from competitive pressure and that some of the carriers now forced into the practice would gladly abandon it if a uniform rule was in effect which relieved them of such pressure.

The Federal Aviation Agency has recently proposed a regulation concerning the use and consumption of intoxicating beverages aboard air carrier aircraft. We are pleased that the FAA has recognized that serious safety problems exist in this area, and that the use and consumption of such beverages must be controlled to provide adequately for safety in air commerce. This proposed regulation provides:

"(a) No person shall drink any alcoholic beverage aboard an air carrier aircraft unless such beverage has been served to him by the air carrier operating the aircraft"; and

"(b) No air carrier shall serve any alcoholic beverage to any person aboard an air carrier aircraft if such person is or appears to be intoxicated."

Under this regulation, a passenger who drinks an alcoholic beverage aboard an air carrier aircraft without being served such beverage by the air carrier will be subject to a civil penalty not to exceed $1,000. Correspondingly, an air carrier which serves an alcoholic beverage to an intoxicated passenger will also be subject to such a penalty.

We feel that this proposal is a step in the right direction, however, in our opinion, it is not adequate nor will it eliminate the recognized hazard for many reasons, including:

SOME DEFECTS OF SUBSECTION (A)

1. Enforcement is impractical. Picture, if you will, the passenger who boards the aircraft along with 100 other passengers after drinking but without outward appearances of intoxication. Now place this passenger in a sealed tube and in an environment where apprehension may develop, and reduce the pressure of the oxygen supply available to him by one-half by climbing the aircraft to 35,000 feet. By this time, the passenger shows some slight signs of intoxication but the whisky cart comes down the aisle to serve drinks to the other 100 passengers. The stewardess now comes to this passenger who, by now, is yearning for a drink. Even under the ATA Code, he is entitled to two 2-ounce drinks, or 4 ounces of alcohol. We believe that under these circumstances, the stewardess will find it almost impossible to deny this passenger a drink while all others are drinking. However, the additional 4 ounces of alcohol may turn this passenger into a flight hazard and social problem.

2. The difficulties which will be incurred in apprehending and prosecuting passenger violators renders the proposal unworkable.

(a) Passengers from foreign countries could not be prosecuted after departing from the jurisdiction of our courts.

(b) U.S. prosecuting attorneys would find it impractical to file complaints and carry out a prosecution against a passenger residing in one State in those cases where the flight crew witnesses are far removed and are based in other States.

(c) Flight crews exposed to pay losses resulting from required appearances in court to testify against passenger violators would be hesitant to cause the instigation of such proceedings.

3. Air carriers exposed to adverse publicity resulting from prosecution and trial of their passengers would be hesitant to report violators to the Administrator.

4. Flight crewmembers exposed to employer discipline resulting from questionable conduct and judgment in enforcing this regulation would not be prone to police and apprehend passengers.

5. Flight crewmembers exposed to lawsuits and legal liability in cases of passenger trial and acquittal of such charges would not be prone to report such violations.

6. Apprehension of passenger violators may result in altercations and disturbances hazardous to air safety.

7. Cabin design, seating configurations, aircraft passenger capacity are factors which renders the policing and apprehending of violators extremely difficult, if not impossible.

8. The evaluation of intoxication has always been a difficult undertaking even for experienced full-time officers of the law. In this case, enforcement will fall largely on cabin attendants who must assume this responsibility in addition to their normal duties.

9. Flight deck crewmembers should not be required to assume such additional duties, nor is it practical for them to do so for obvious reasons.

The foregoing points are not all of the defects which are inherent in this proposal. In the first and final analysis, this proposed regulation would not prevent passengers from consuming their own intoxicants; it would not and cannot prevent passengers already under the influence from being served or sold intoxicants by air carriers; it does not prevent passengers from becoming intoxicated on board air carrier aircraft.

We believe that it is the proper responsibility of Congress to protect the public interest in this matter. The time and place for the consumption of alcoholic beverages has always been a matter of legislation by the appropriate authority whenever a threat to public safety or a social problem is known to exist. There is probably no one place more inappropriate, from a safety and social standpoint, for the sale or service of alcoholic beverages than on board an aircraft in flight where every precaution must be taken in the interest of safety, and where people confined in a sealed tube are deprived of any ability to move away from obnoxious social situations. Also, the modern airplane may cross many municipal, county, State, or even international boundaries in a single flight making regulation by the normal methods impractical. It, therefore, falls, in our opinion, to the Federal Government to protect the public interest in this problem.

We have previously advocated in testimony before the Interstate and Foreign Commerce Committee of the House of Representatives that the proposed legislation should prohibit the service of alcoholic beverages on domestic flights only. This would leave U.S. carriers who must compete with foreign airlines free to serve alcoholic beverages, if necessary, in the interest of competition. While we recognize this necessity in international aviation, there is no such necessity in domestic operation where the prohibition will apply to all carriers and no competitive position among air

carriers will be lost. It is hoped, however, that steps can be taken in order that international carriers will adopt necessary measures of control so that if it is necessary in the interest of promoting our international aviation to permit this practice to continue, it will be done within prescribed rules and regulations.

We have previously furnished the Congress with examples of incidents that have occurred in flight and provided detailed information on the problems which they created. Such incidents continue to occur. It would merely prolong our statement by repeating them here but we would be happy to furnish them if the committee desires.

We appreciate the opportunity to appear in connection with this legislation and will be happy to make available any further information in our possession that may be of help to you in connection with it.

QUALIFICATIONS OF WITNESS CLARENCE N. SAYEN, PRESIDENT, AIR LINE PILOTS ASSOCIATION, INTERNATIONAL, AND INTERNATIONAL FEDERATION OF AIR LINE PILOTS ASSOCIATIONS

The Air Line Pilots Association is an association of the professional airline pilots of the scheduled U.S. air carriers. At present, it has a membership of over 17,000 active and inactive members employed by 52 certificated airlines. The association represents airline pilots in all aspects of their professional life. It is their bargaining agent under the Railway Labor Act, maintains an extensive air safety organization in 147 councils scattered throughout the United States and a number of foreign countries, and is spokesman for the airline pilot in his relationship with municipal, State, Federal, and international organizations.

The International Federation of Air Line Pilots Associations is a federation of the pilot representing organizations of 34 countries and represents the professional pilots of practically all civil aviation in the world outside the Iron Curtain countries.

By way of personal background, I hold B.A. and M.A. degrees in geography and economics and an honorary doctor of science degree. I have been a teacher and an airline pilot. Some current activities include membership on the Committee on Operating Problems of the National Advisory Committee for Aeronautics; Executive Committee of the National Air Transport Coordinating Committee; War Air Service Pattern Committee of the Defense Air Transportation Administration; Executive Committee of the Radio Technical Commission for Aeronautics; the Chicago Aero Commission; and Industry Advisory Committee of the Interdepartmental Aviation Manpower Committee.

Spending, Inflation, and Communism

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. PHILBIN. Mr. Speaker, there are definite signs of a public awakening to the realities and dangers confronting the country as a result of the dual threat of communism and governmental spending at every level.

Day by day, the American people are showing increased interest in and awareness of the menace of communism and inflation and the sad fact of increasingly excessive public spending.

While we must constantly be on guard to prevent the possibility of armed attack, and to serve the paramount need of safeguarding the national security, it would be a supreme folly indeed to ignore the possible, disastrous effects of huge spending programs, lack of economy and efficiency in Government, and the ghastly damage that could come to our free enterprise system and the well-being and prosperity of the American people from runaway, unregulated inflation.

Communism and public spending are twin specters lifting their ugly heads in the body politic threatening our way of life. They are related factors in our current national posture, since inflationary pressures further diminishing the purchasing power of the dollar, increasing the cost of living, and bringing hardship to millions of Americans could conceivably produce social conditions in this country which might easily give rise to radical theories of government and vigorous demands for revolutionary organic changes in our entire system.

The plain facts of financial, fiscal, and economic developments in the Government during the past few years give rise to great concerns. The national budget for the fiscal year just finished was unbalanced by more than $13 billion. The steadily rising cost of Government and living has produced understandable anxiety among all thoughtful people.

It is clear that current trends must be checked if we are to have any real hope whatever of stabilizing economic and social conditions, of bringing down the high cost of living and putting the fiscal affairs of government on a sound basis.

Over a period of years, annual appropriations and expenditures have been steadily rising until today, they have reached the highest peacetime peak in history. The general public has become very much disturbed and is sending a barrage of protests to Members of Congress and the executive branch, urging a return to sound principles of economics and prudent budgetary and financial policies—an end to improvident spending wherever it exists.

In recent days and weeks, I have received many communications from my constituents and other people pleading for economy, efficiency, and stability in the Federal Government. Frankly, I have believed for a long time past, and have sounded warnings on numerous occasions, that unless we found ways and means to balance the budget, reduce the national debt, decrease onerous taxes and declare war on extravagance, waste and unecessary spending that we would be unloosing in this Nation a frightful monster that would possibly cause the most disastrous consequences for the Government, the economic system, and the people.

Many factors have been responsible for this situation and I shall not attempt to assess the blame for current conditions. For several years we have been under great national stress and strain and in the midst of one crisis after another. First, we had a great World War II, which was tumultuous and bloody, and extremely costly in terms of wealth, property, and human lives.

In the aftermath of this war, we had many extremely difficult problems to solve. We were faced at once with the machinations of world communism preying upon hundreds of millions of helpless people wracked by industrial and economic stagnation and hunger and pestilence.

It was necessary for us to try to combat these forces.

Whether we did so intelligently and wisely is a question that I have discussed on other occasions.

No doubt, many of the policies we pursued and many of the things that we did either caused or contributed to the severity of the very serious problems confronting us on the world scene.

For example, while the overall program of foreign aid was commendable and necessary at the time and could have been wisely and prudently directed, our Government over a period of years passed out huge sums of taxpayers' dollars in an imprudent, wasteful and extravagant manner. This has been an administrative nightmare.

At the same time, in our zeal to promote lasting peace, we appeased and compromised with those who were conducting Communist conspiracy, aggression, infiltration, social disturbances, violence and wars in many parts of the globe. This policy of appeasement and compromise was continued through the Korean war and even thereafter. Our spending policy overseas became more lavish and grandiose and billions and billions of dollars were spent without proper audit, checks and balances, and suitable accountability for either need or expenditure.

Consequently, it was a happy circumstance that during the period between 1947 and 1952 when this lavish spending was running at a high rate and the Korean war was on that we were able to balance our budget at any point, let alone pay off $3 billion on the national debt which we were able to do. Yet that was done during those years.

When we consider that this period covered the costly Korean war, it is all the more remarkable that we were able to make such a substantial payment of more than $3 billion on the national debt, and I think we could all agree that President Truman and his administration deserve to be commended for the fact that they were able to make such substantial reductions of the national debt during that time.

Since that time, however, for one reason or another, mostly because of the rising costs of defense and national security and the increased cost of general government, the national debt has vastly increased by many billions of dollars—well over $20 billion. This at a time when Government revenues had increased over the previous period mentioned between 1949 and 1952 by more than $152 billion.

When I cite these figures, I feel a sense of frustration and helplessness before the furious pressures of superspending and improvidence which are

causing budgetary deficits and alarming inflationary effects.

There is only one answer to my mind that this Congress can give to these very challenging current fiscal and financial problems and that is to make even greater efforts day by day to install in the Government that degree of prudence, economic management and administrative efficiency which will, if diligently and vigorously pursued, promote huge annual savings for the U.S. Treasury and for the harassed and long-suffering taxpayers.

I think that the Congress has been deeply impressed by recent popular reactions demanding a balanced budget, demanding reduced taxes, demanding reduction of the national debt, and demanding war on inflation.

Of course, there are some areas in which until international tensions subside, Congress cannot safely make substantial cuts. There are, while strict economy is required, essential services of defense and general government that must continue, some of them perhaps with even increased tempo.

Defense, of course, is basic and we cannot cut back at the expense of national security. The regular Government services must be prudently maintained to keep pace with economic, social, and cultural progress. All kinds of new developments and demands incident to growth, change and readjustment are taking place. We cannot afford to turn our backs on the inevitable progress of the Nation nor can we ignore the needs of the fabulous space age.

But we can and must dedicate ourselves these days with all our hearts to the urgent tasks of bringing expenditures into balance with revenue, to eliminate needless, wasteful appropriations, of standing squarely and unequivocally for every possible measure of economy and efficiency in Government affairs.

We cannot always eliminate many appropriation items entirely, but we can always insist that the moneys appropriated are appropriated thoughtfully, spent judiciously, checked and accounted for wisely, and that none of the taxpayer's hard-earned money paid into the Federal Treasury is wasted or imprudently expended.

It is my deep concern that, notwithstanding the attitude of the Treasury and even some Members of Congress, that this Congress must reduce current onerous taxes on our citizens and on business. There should be reduction this year, in my opinion, to lift some of the heavy burdens from the backs of the people and to give enterprising businessmen, especially the small businessman who needs it so desperately, the fresh opportunity and new encouragement to tackle their current problems and expand their activities and try to put their business on a satisfactory income-producing basis.

I realize that there are many Members of Congress who do not favor tax reduction this year, and I highly respect their views even as I disagree with them. It is my opinion that if taxes were reduced, greater impetus and encouragement would be given to business, our cherished high American standard of living would be refortified against present crushing taxation of the people and thus, the economy and the people as a whole would be better off.

As a consequence, I believe that Government revenue would materially increase enabling the balancing of the budget. I personally do not believe that petty considerations of politics should be allowed to enter the settlement of these vitally important issues. The present situation in all its aspects, foreign, domestic, social, and economic, is far too serious to permit the presence of partisanship in matters which affect the destiny of this Nation and free mankind.

Both President Truman and President Eisenhower have shown ability, courage and patriotism in tackling the weighty and very challenging problems of their respective administrations. The problems facing the President and facing the country and the world today are truly stupendous and incalculable.

Digging up financial and political skeletons of the past and present will not provide a solution for our present plight. Only a vigilant, determined Congress and a cooperative executive department, working unitedly and wholeheartedly without regard to partisan political objectives, can effectively tackle and ultimately solve the great financial, political, and economic problems that are confronting the Nation and the world today.

I hope that we will have that kind of sincere cooperation and that kind of wholehearted jointer of effort, that wholesome collaboration between all great branches of the Government that is needed, if we are to check ruthless communism and dangerous inflationary trends and insure the unquestioned financial soundness and economic stability of the U.S. Treasury and the Nation.

The elimination of waste and extravagance and the curbing of lavish spending is one of the greatest problems before the country today. It is up to the Congress to tackle it, thus insuring a sound Government and real prosperity for the entire country.

The best defense against communism, high prices, and inflation is a sound dollar, a balanced budget, a reduced national debt, lower taxes for the American public, and efficiency and economy in the Government.

Is there any valid reason why Congress cannot work for these objectives? I think not, and I believe we must do so.

Mutual Security Appropriations, 1960

SPEECH
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8385) making appropriations for mutual security and related agencies for the fiscal year ending June 30, 1960, and for other purposes.

Mr. DONOHUE. Mr. Chairman, as I see it, this debate on the reduced and reasonable continuation of our mutual security aid program should begin with a concrete demonstration of our deepest concern for our overburdened American taxpayers.

That legislative concern should be even more concentrated and emphasized because of the factual evidence in the record, by the Draper Committee, the Comptroller General, himself, and our congressional committees, "of waste and extravagance—a pattern of loose, lax administration through the entire complex of foreign aid—and refusal of the ICA to provide information."

Mr. Chairman, the only sensible way to keep people from wasting money and indulging in needless, worthless, extravagant projects is not to give them the money.

I earnestly hope that in the phases of the program where this extravagance and waste has been displayed the recommended reductions will be approved.

The divisions of this program which appear to have been operated and projected in the best interests of ourselves and the advancement of our foreign allies are the technical assistance and velopment Loan Fund extensions. I hope that these features will be adequately supported as their worth has been substantially proven.

Mr. Chairman, considering our economic and financial difficulties and the fact that this program has been in existence over many years and through many billions of the hard earned money of our American taxpayers, I submit that the end of the major aspects of it ought to be kept in sight; certainly the giveaway features should be eliminated entirely now since most of the recipient countries have made steady progress in their rehabilitation development.

As we look and work toward the conclusion of this program, in the interests of our own American people, let us strive today to conscientiously enact a measure that will provide reasonable assistance to our allies, in the fields where such help is most needed, while we ensure elimination of those parts of the program which have been proved wasteful and worthless.

Fit for a King

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. RHODES of Arizona. Mr. Speaker, the folks back home are worried about taxes, deficits, and unnecessary expenditures. It is only natural and proper that expenses of the legislative branch should be studied as well as expenses of the executive branch. One newspaper

editor, John McCarroll of the Wickenburg Sun, has made such a study. Here are his comments.

FIT FOR A KING

Anyone who thinks Congress will be careful with his tax dollars without prodding from the homefolks needs only to look at Capitol Hill to be disillusioned.

The House of Representatives is going ahead with a new $84 million office building which will house only part of its Members. This figure has been worked out at $192,000 a room, and each Representative will have three rooms.

And so each Representative's quarters will cost about as much as three dozen new homes that his constituents might build to house their families—if they could afford it.

Of course, it's unfair to compare office building costs with homebuilding costs, so look at it another way. For little more than half what the Congressmen are spending on their quarters—$46 million—Union Carbide is putting up a block square 52-story office building on New York's plush Park Avenue. But, we suppose such austere quarters would not be good enough for our lawmakers.

It seems they must function amid splendor in the capital, even though the old front porch may be good enough office quarters back home.

When Congress is so indifferent to prodigal spending which it can view from the windows of the Capitol, is it any wonder that Federal money wasted in far-off Oregon or Laos fails to excite our lawmakers.

It looks like the voters are the ones who will have to get excited.

The Fable of Federal Aid

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 9, 1959

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's Wall Street Journal, which further points up some of the inherent difficulties involved in attempting to go beyond the proper Federal role of providing the incentive to our cities to go a long way toward solving their own urban renewal problems.

THE FABLE OF FEDERAL AID

A great many of the mayors of America, who find it more difficult to raise local taxes than to spread the fable that somehow Federal aid is free, appear exceedingly disturbed by the President's veto of the Federal housing bill.

None, however, that we read about was quite as disturbed as Mayor Richardson Dilworth, of Philadelphia, who, admittedly, has a great number of tough problems on his hands. Not only does Mr. Dilworth think that Uncle Sam can cure the plight of every troubled city, the Philadelphia mayor says that Washington has an obligation to do so. "Our cities," he told the Conference of Mayors, "must be renewed."

Now, putting aside for the moment the question of whose responsibility it is when a city becomes so rundown that it must be renewed, Mr. Dilworth's statement poses a vast problem for the country. Must a city that is perhaps so out of joint with the times that the economy has passed it by be renewed? But that sort of thing has happened all through history; cities grow and cities wither as patterns of living change and people move about. It is not too much to say that some cities could not possibly be renewed, except maybe as museum pieces, no matter how many billions the Federal Government took from the taxpayers.

The Federal Government cannot put life and vigor into any city, except temporarily. And any mayor who goes home and tells his constituents that it can do so is not telling all of the story.

The fable that Federal aid is somehow free might be partly true if only one mayor out of every thousand, say, got Federal aid for his city; his citizens would pay only part of the cost of the help. But it doesn't work that way, for the other 999 will get it, too. In the end, the people of the 1,000 cities and all the rest of the country will pay the whole bill, for unless Government runs deeper into debt it can only get the money it spends by taxing all the people.

We hope these remarks will not be taken as unsympathetic to the cities or to the men the people elect to handle their affairs. The cities and all the mayors have a great many problems.

One of them, as all the mayors are quick to point out, is that after Uncle Sam has wrung the pockets of the taxpayers there isn't a great deal left for the mayors.

But the way to straighten out the problems is not to run to Washington with their hats in their hands and the fable of Federal aid in all their speeches. The way to change it is to demand that Washington cease doing the things for the cities that the cities ought to do for themselves.

Remove Wheat Controls, Too

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. WOLF. Mr. Speaker, the following editorial appeared on July 23 in the Des Moines Tribune, a reprint from the St. Louis Post-Dispatch. For those who are concerned with the farm question, this editorial asks some significant questions. For example—

What sort of folly is it to advocate a corn program for wheat, when there is already a $3 billion wheat surplus?

Referring to a statement which Secretary Benson recently made in the House Agriculture Committee I highly recommend this provocative editorial for the reading of this body:

[From the Des Moines Tribune, July 23, 1959]

REMOVE WHEAT CONTROLS, TOO?

(An editorial in the St. Louis Post-Dispatch)

It has long been evident that U.S. farm policy is bankrupt. Department of Agriculture forecasts of the biggest corn crop in the Nation's history serve only to confirm that fact.

This is the first year corn has been free of acreage controls under an administration-sponsored program that permits corn farmers unlimited production with lower price guarantees.

The support level is $1.12 a bushel, a figure derived from the average of corn prices for the last 3 years. It is 6 cents lower than the price under the old parity system, which Secretary Ezra Benson now wants Congress to abandon for wheat as well as for corn.

WHEAT SUPPORT

Recently Benson went before the House Agriculture Committee and asked Congress to enact before the end of July an administration wheat program which would gear price supports to 75 percent of the average market price of the last 3 years.

What sort of folly is it to advocate a corn program for wheat, when there is already a $3-billion wheat surplus?

No wonder Chairman HAROLD COOLEY, Democrat of North Carolina, of the Agriculture Committee told Benson:

"Not a man on this committee from a wheatgrowing State agrees with that philosophy; I wish you would give us some kind of wheat bill this committee can pass." He might have added: "And which President Eisenhower will not veto."

THE EXPECTED CORN CROP

Benson knows as well as anyone that the expected corn crop of 4,200 million bushels means serious political trouble next year in the Midwest, heartland of Republican strength.

Abundant corn means cheap hogs. Already down 36 percent from last year's peak, hogs are expected to go lower this fall and even lower next year at a time when political campaigning will be in full swing.

Some economists are predicting candidates will be eating 39-cent-a-pound pork chops. That price is around half the current figure.

The Gallup poll reports a new low point for Republican congressional fortunes in the 12-State Midwest region. Benson had better think fast.

PROPOSE A SUMMIT

Representative COOLEY and Representative CHARLES B. HOEVEN, Republican of Iowa, top Republicans on the Agriculture Committee, have proposed a White House summit conference on the wheat impasse.

The plan would be to bring together the leaders of farm organizations and top agricultural experts in and out of Government to try to find at least an emergency solution.

Certainly no evil could come of this. Yet Benson is reported unenthusiastic and there is no word of Mr. Eisenhower's reaction.

RADIO-TV SPEECH

Recently William M. Blair wrote in the New York Times that Mr. Eisenhower was reported preparing a radio-television speech to arouse public sentiment on the farm issue and to pin on Congress the sole responsibility for the failure of farm programs to overcome the surplus crop problem.

Blair said the talk was planned for delivery late this month or early in August.

If the President is indeed considering such a speech why should he wait for 2 or 3 weeks?

To do so would be tacit recognition that there is not going to be any legislation to relieve the surplus problem at this session, and that the whole matter is to become a political football next year.

MISTRUST OF BENSON

Farm problems cannot be separated entirely from politics. But they cannot be solved solely on political grounds, either.

Mr. Eisenhower may gain something politically by using the airwaves to berate Congress, but he will not get farm legislation.

One of the basic difficulties remains—congressional mistrust of Benson. Until that is resolved in the public interest, little is likely to happen.

That is why Mr. Eisenhower should work for a temporary compromise that will hold until a new administration takes over in 1961.

Welfare State in Action

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 14, 1959

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I wish to include a reprint from the Indianapolis Star, March 21, 1959, edition, entitled "Welfare State in Action."

The article describes the failure of the welfare state program administered by the Federal Government for the Indian people. I agree wholeheartedly with its conclusion that the only way we can help the Indian people, and all citizens, is through the principles and practices of individual initiative. My "Operation Bootstrap" for Indian reservations is based on this principle that we can help people most by letting them help themselves.

[From the Indianapolis Star, Mar. 21, 1959]

WELFARE STATE IN ACTION

A picture of Indians of the Six Nations picketing the White House probably attracted no more than a curious glance. But the next time you are traveling in a part of the country where there is a major Indian reservation, give it more than a curious glance. Give a thoughtful look. There, but for the grace of God, sit you, or we.

But for the grace of God—and the independence of a lot of ancestors who figured they would work things out for themselves rather than look to the Government to take care of them.

The Indians were not given as much choice about it. For more than 170 years—though considerably less in the case of some tribes which were less tractable than others—the all-providing guardian of the reservation Indians has been the U.S. Government. In any case, since well beyond the memory of any living elder, the reservation Indian has been the beneficiary of a cradle-to-the-grave welfare state administered in Washington.

What is the result?

In Missisippi, the Jackson Clarion-Ledger and Daily News recently looked to the Choctaw Indians, whose reservation is there, for an answer. A missionary called the Choctaws the most poverty-stricken group in the Nation. The only serious challenge we can think of to that statement might come from those who would claim that the distinction belongs to some other reservation tribe. This condition has been developed under generation after generation of management of economic affairs by Federal "experts." It is to such management as this that the welfare enthusiasts want to turn over the entire American economy.

The missionary critic said the adult Choctaws average a second grade education. An Indian Agency official said this wasn't so, that the Choctaws have a fourth grade average. The Federal Government, from the beginning, has been responsible for providing education for the reservation Indians. This is the same Government which the Federal aiders say must plunge into all American public education at once, to save it from disaster.

The last school census showed some 91,000 Indians of school age. A third of these were in public schools, off the reservations. Nearly 8,000 were in mission schools. About half of the rest were in federally provided schools. On the Navajo reservation alone, in the Southwest, there were 15,000 school age children not in school. School facilities were not available for them. It is to the Federal Government, which has had the responsibility for reservation schools from the beginning, that the Federal aid enthusiasts now want the whole country to look for money and example in providing adequate schools. What an example.

The tuberculosis death rate among the Choctaws is put at five times the national average. The infant death rate is termed three times the national average. The Federal Government is and has been responsible for hospitals and medical care for the reservation Indians. The welfare staters want to turn over the health of the entire Nation to the mercies of a bureaucracy with a record like this.

These are, to be sure, examples from the worst of the Indians' experience. Many Indians, either in groups or individually, now live just as well as anyone else. But they haven't done it under the care and feeding of the Federal Government. These are the ones who have succeeded in taking over the management of their own affairs or who have left the reservations or who have been so fortunate as to have oil turn up under their tribal lands.

Take a long and thoughtful look at the tribal groups which have continued to depend on the wisdom and benevolence of Federal paternalism. You will see what all America would be like a few generations from now if the welfare state planners should succeed in taking over.

Let's not let it happen. Let's chuck the welfare state, with its security and its benefits, into the ashcan where it belongs. Let's go back to the principles and practices of individual initiative. They built a nation out of a wilderness. They can keep the Nation going forward to ever greater heights of freedom and progress.

Job Competition From Abroad

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of July 27, 1959:

JOB COMPETITION FROM ABROAD

European industry finally has learned from adversity a lesson it now is using with astonishing success. Our reporter, Charles Lucey, after weeks in Europe, reports about this spectacular rebound from wars and inflation.

What the Europeans have done is copy us. They are using our mass-production methods, our automation. This, in substance, is the system which gave us the highest living standards in history, and world leadership in industry. The Europeans are on their way.

Almost overnight they have become primary competitors instead of primary customers. They are stronger as allies against communism but also are a threat to American markets and to American jobs.

In this they have one telling advantage. Their wage costs are lower. This is a factor in their successes, such as:

In 1953 the United States exported 186,000 autos and bought from abroad fewer than 30,000. Last year we sold only 126,000 overseas but our people bought 431,000 foreign cars. This year the gap is widening.

Another example: Senator WILLIAM PROXMIRE, Democrat, of Wisconsin, recently noted that industries in his State had transferred part of their production to Europe "with a loss of more than 2,000 Wisconsin jobs."

At the root of our trouble is inflation which has forced up prices along with wages thus placing our industry at a competitive disadvantage without giving our workers any substantial improvement in the purchasing power of their wages.

Additionally, from a competitive standpoint, six European nations have knocked down their interior tariff walls, encouraging mass production by providing a relatively free market roughly comparable in size to the United States.

Competition is good for us. It is justly termed the life of trade. But we have to compete successfully if we are to maintain and improve our living standards. We can't compete by pricing ourselves out of the market. Europe has learned the hard way, through adversity. We still have a chance to learn before adversity sets in.

American Citizens of Italian Descent

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 29, 1959

Mr. BARRETT. Mr. Speaker, I would like to call to the attention of the Members of the House of Representatives an outstanding editorial that appeared in the July 12, 1959 edition of Il Progresso Italo-Americano.

This editorial expresses the thought that the dignity and high reputation of American citizens of Italian descent is being endangered by the irresponsible activities of many television and movie writers and authors of books and articles, who persist in portraying gangsters and other evil characters as almost exclusively Italian or of Italian type.

This unfortunate practice at best, reflects on the writers as innocent of all literary imagination; at worst, it constitutes an unfair, unjustified disparagement of those of our fellow citizens who happen to be of Italian origin. That the descendants of a nation which has contributed so much to the richness of the culture which we all now enjoy should be thus misrepresented by screen and press ought to be a weight on the conscience of every thoughtful American.

Perhaps those who take great delight in belittling the Italian people and our own citizens of Italian descent have forgotten the men who wrote the Roman law; or the great painters like Michelangelo; or the poetry of Dante; or the great music of Puccini or Verdi. And of the utmost significance to all of us, was it not the imaginative Italian, Columbus, who sailed across an unknown ocean to discover our beautiful American Continent?

The creativity, the intelligence, the sensitivity, the strength that finds expression in great men like these is the common cultural inheritance of all the proud descendants of the Italian nation.

Without question they deserve our highest respect and our best efforts to prevent the defamation of their good name.

Restoration of Central Credit Union Authority

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, the Rules Committee on July 29 granted a rule on H.R. 8305, and this rule will probably come to the floor on Thursday, July 30.

In the interest of informing Members, and speaking for the Banking and Currency Committee members who signed the supplemental views on the Federal Credit Union Act in House Report 696, I wish to here insert the amendments that will be offered tomorrow to restore Federal central credit union authority. These amendments simply restore to H.R. 8305 the language which was in the bill as it left Subcommittee No. 3 on its way to the Banking and Currency Committee, except for one clarifying technical amendment. These amendments are as follows:

AMENDMENTS TO RESTORE CENTRAL CREDIT UNION AUTHORITY

Page 2, line 3, strike out the semicolon and insert a comma and the following: "and includes a cooperative association (hereinafter called a 'Federal central credit union') whose members are Federal credit unions and credit unions organized in accordance with the provisions of law of any State, the District of Columbia, the several Territories and possessions of the United States, the Panama Canal Zone, or the Commonwealth of Puerto Rico, and located within a well-defined geographical area, and whose members may also be directors and members of the supervisory and credit committees of such credit unions;".

Page 2, line 16, strike "natural".

Page 8, line 13, after the word "surplus" insert the following: ", but this limitation shall not apply to loans by Federal central credit unions".

Page 8, line 13, strike out "or"; and in line 15, after the semicolon insert the following: "or (E) in shares of Federal central credit unions, in a total amount not exceeding 25 per centum of its paid-in and unimpaired capital and surplus. Payments to, and withdrawals from, such central credit unions by a Federal credit union must be specifically authorized by the board of directors of such Federal credit union;".

Page 10, line 10, after the word "that" insert the following: ", other than as provided in section 2(1) with respect to Federal central credit unions,".

Page 10, line 14, after the period insert the following: "A Federal credit union may, by authorization of its board of directors, become a subscriber to, or organizer or member of, a Federal central credit union or other central credit union."

Page 11, line 4, after the period insert the following: "Federal credit unions having membership in a central credit union may be represented at annual or special meetings of the central credit union by one member duly authorized by the board of directors of the member Federal credit union. To the extent permitted by the articles or certificate of incorporation or bylaws of the central credit union, such representative shall have one vote and shall be eligible for office in the central credit union the same as though he were a member as an individual of such credit union."

Page 11, line 10, after the word "members" insert the following: "(which, in the case of Federal central credit unions, shall be deemed to include the duly authorized representatives of the member credit unions)".

Page 15, line 8, after the word "or" add the following: ", except in the case of a loan by a Federal central credit union to a member credit union,".

Mr. Speaker, the views of the members of the full committee who support Federal Central Credit Unions are set forth on pages 8 through 14 of the Report. The heart of the agreement is found on the last two pages thereof, and is as follows:

The proposed Federal central credit union was designed to fulfil two significant functions:

(1) Federal central credit unions would act as a clearinghouse for surplus credit-union funds, receiving funds from credit unions with a temporary surplus and lending these funds to other credit unions experiencing heavy loan demands. The smaller credit unions with fewer sources of credit tend to experience greater problems when attempting to borrow funds than do the larger credit unions. Although the larger credit unions may have excellent financial relationships with commercial banks or other financial institutions, many smaller or medium size credit unions experience undue delay, excessive cost, or, in many cases, face outright refusal in having their borrowing requests fulfilled by existing financial institutions.

Federal credit unions may now borrow from others only by a lengthy, time-consuming, and difficult process. These provisions will relieve officers of this groundless and burdensome work.

There are a number of specific reasons why Federal credit unions need to have this additional source from which they can borrow funds.

(a) Most Federal credit unions experience seasonal and cyclical needs for additional funds, even with a membership composed of individuals who enjoy regular incomes. For instance, credit unions organized in industrial plans where employment is regular and where the membership receive their incomes regularly, still face seasonal demands for loans (at Christmas, Easter, etc.). These credit unions need to be able to borrow additional funds to meet these legitimate loan demands.

(b) Many Federal credit unions are organized among groups which receive irregular incomes such as those serving farmers or teachers. In addition to the normal seasonal needs for extra funds, these credit unions, to function effectively, need additional sources of funds to cope with the problems of large swings in their total share accounts and loan demands.

(c) Other reasons are: an industrial plant within which a credit union is organized is temporarily shut down, or there are layoffs of a substantial number of employees, or there may be some sort of disaster such as a flood or fire in the local community. In these cases members will be withdrawing shares from the credit union, while at the same time, the credit union is experiencing increased loan demands because of the financial difficulties of its members. In these types of cases it is often very difficult for these credit unions to be able to borrow the funds they need to serve their members effectively.

On the other hand many credit unions have chronic surpluses of funds. Many such credit unions operating under State charter are presently investing some part of these surplus funds in State chartered central credit unions and providing the capital for the effective operation of these central credit unions.

(2) Federal credit unions would provide mechanism for meeting the borrowing needs of credit union officers whose indebtedness to their credit unions is presently limited to the amount of their share accounts. The bill ordered reported by the Banking and Currency Committee would permit credit union officers to borrow from their credit unions up to the amount of their shareholdings, plus the total unencumbered and unpledged shareholdings in the credit union of any member pledged as security for the obligation of such directors or committee members. This seems to be a reasonable restriction upon the directors and committee members of a credit union. However, by accepting a position as an officer in a credit union, the member in effect gives up some of the privileges of membership in that credit union. With Federal credit unions having a rather extensive officer turnover the limitation on officers borrowing deters many members from accepting the responsibility of being a credit union officer. Thus, it is obvious that there is need for some type of credit union which can serve the credit needs of credit union officers. While Federal credit unions to serve officers have been chartered ("officer credit unions"), they have frequently been unable to attract adequate funds to serve their officer members' credit needs because of the restrictions against Federal credit unions investing shares in the central credit unions.

The testimony before the subcommittee was overwhelmingly on one side of this issue. The experience of the States which have central credit unions is overwhelmingly favorable. The same safeguards which apply to the operations of local credit unions would also apply to central credit unions. There is no reason for the Federal law to fail to include permissive provision for such central credit unions. These central credit unions are serving useful purposes in those States where they are now in operation; they would serve similar useful purposes for Federal credit unions, their members, and their officers.

We see no reason to delay consideration of this amendment. In the first place, it has already been thoroughly considered by the subcommittee. In the second place, this entire bill has been viewed as a recodification of the Federal Credit Union Act. If these provisions are considered later in a separate bill, it will take amendments at eight separate places in the recodification to replace what was deleted by a close vote in the committee.

The delays and difficulties in the path of considering this matter in separate legislation are too well known to need amplification here. The time to wrap up a complete Federal credit union code is now, at the time of recodification.

We believe that the measure should be amended to reinstate provisions for the chartering and operation of Federal central credit unions.

WRIGHT PATMAN.
HENRY S. REUSS.
JOSEPH W. BARR.
CLEM MILLER.
BYRON L. JOHNSON.

Captive Nations Year Needed

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. FEIGHAN. Mr. Speaker, I introduced a resolution requesting the President to issue a proclamation designating the third week in July as Captive Nations Week. My resolution was identical with the resolution introduced in the Senate. The resolution was adopted by the Congress and the President issued his proclamation on July 17.

Under leave obtained, I insert in the RECORD an article by David Lawrence entitled "Captive Nations Year Needed."

CAPTIVE NATIONS YEAR NEEDED—FAINTHEARTED IN UNITED STATES AND SOVIET CRITICS ARE REMINDED OF AMERICA'S POLICY

(By David Lawrence)

Maybe there ought to be a "Captive Nations Year" instead of a "Captive Nations Week." Then the protest will be continuous instead of once a year.

Evidently those fainthearted in our midst who think it was a bad idea for the Congress of the United States to proclaim American ideals to the peoples of the world and utter words of sympathy to the oppressed don't know that similar protests have been perennial in American history. Or else they are so afraid of offending Khrushchev that they are willing to appease him still more by criticizing what Congress did.

A glance at the record will show that the Democratic and Republican Parties have for more than 70 years inserted from time to time planks in their national platforms expressing the sympathy of the American people for oppressed peoples abroad. It has become so natural for this to be done by both parties that the Congress earlier this month spent only a few minutes debating the joint resolution which subsequently aroused the ire of the Communist imperialists in Moscow.

In 1892, both the Republican and Democratic platforms condemned the Russian Government for the mistreatment of its people. The Democratic platform plank, entitled "Sympathy for the Oppressed," read as follows:

"This country has always been the refuge of the oppressed from every land—exiles for conscience sake—and, in the spirit of the founders of our Government, we condemn the oppression practiced by the Russian Government upon its Lutheran and Jewish subjects; and we call upon our National Government, in the interest of justice and humanity, by all just and proper means, to use its prompt and best efforts to bring about a cessation of these cruel persecutions in the dominions of the Czar, and to secure to the oppressed equal rights.

"We tender our profound and earnest sympathy to those lovers of freedom who are struggling for home rule and the great cause of local self-government in Ireland."

The Republican national platform in the same year, under the title "Championing the Oppressed," had this plank:

"The Republican Party has always been the champion of the oppressed, and recognizes the dignity of manhood, irrespective of faith, color, or nationality. It sympathizes with the cause of home rule in Ireland, and protests against the persecution of the Jews in Russia."

In 1896, the Republican platform had a plank saying: "The Armenian massacres (by the Turks) have aroused the deep sympathy and just indignation of the American people, and we believe that the United States should exercise all the influence it can properly exert to bring these atrocities to an end."

Then, in 1900, the Democratic platform had a plank expressing sympathy with the efforts of the Boers of South Africa to gain "liberty and independence" from British rule.

In 1920, the Democratic national platform contained a plank "expressing its active sympathy with the people of China, Czechoslovakia, Finland, Yugoslavia, Poland, Persia, and others who have recently established representative government." Another plank expressed sympathy with the efforts of the Irish people to get their freedom, and still another plank called on the American Government to "render every possible and proper aid to the unfortunate people of Armenia."

The year 1944 saw the first plank from the Republicans calling for a free democratic commonwealth in Palestine. Then, in 1948, the Democrats had a plank, too, looking forward to the admission of the State of Israel to the United Nations. The Republicans in their platform that year also had a plank proclaiming friendship with the people of Palestine.

The 1956 Republican platform said:

"We shall continue to seek the reunification of Germany in freedom, and the liberation of the satellite states—Poland, Czechoslovakia, Hungary, Rumania, Bulgaria, Latvia, Lithuania, Estonia, and other once-free countries now behind the Iron Curtain. The Republican Party stands firmly with the peoples of these countries in their quest for freedom. We are confident that our peaceful policies, resolutely pursued, will finally restore freedom and national independence to oppressed peoples and nations."

The 1956 Democratic plank said in part: "We declare our deepest concern for the plight of the freedom-loving peoples of Central and Eastern Europe and of Asia, now under the yoke of Soviet dictatorship. The United States, under Democratic leaders, has never recognized the forcible annexation of Lithuania, Latvia, and Estonia, or condoned the extension of the Kremlin's tyranny over Poland, Bulgaria, Rumania, Czechoslovakia, Hungary, Albania, and other countries. We look forward to the day when the liberties of all captive nations will be restored to them and they can again take their rightful place in the community of free nations."

It's an old story with America, but somehow Nikita Khrushchev hasn't heard of it.

U.S. Route 51 Should Be Included in the National System of Interstate and Defense Highways

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. MACK. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolution adopted by the House of Representatives of the State of Illinois:

HOUSE JOINT RESOLUTION 15

Whereas the existing public highway route marked as U.S. 51, commencing near the important shipping port of Duluth on the shore of Lake Superior and extending in an approximately straight line to the great shipping port of New Orleans, transverses the heart of the industrial, agricultural and mining areas of the State of Illinois and is hereby one of the most important avenues of this Nation in the transport of personnel, goods, wares, merchandise and foodstuffs essential to the health, welfare and defense of this Nation; and

Whereas it is the sense of the General Assembly of the State of Illinois that such highway route in this State is a more heavily traveled and a more important pathway of communication than some of the routes that have been designated as part of the National System of Interstate and Defense Highways and should therefore be included as part of such National System of Interstate and Defense Highways provided for by the Congress: Therefore be it

Resolved, by the House of Representatives of the 71st General Assembly of the State of Illinois, (the Senate concurring herein), That the Congress of the United States is urged to take appropriate action to provide for the inclusion of the route of the existing public highway marked as U.S. 51 in the State of Illinois in the system of highways now provided for by Federal law and known as the National System of Interstate and Defense Highways; and that an appropriate copy of this resolution and its preamble be forwarded by the Secretary of State to each Member of Congress from this State.

Adopted by the house, February 16, 1959.
PAUL POWELL,
Speaker, House of Representatives.
CLARENCE BOYLE,
Clerk, House of Representatives.
Concurred in by the senate, June 8, 1959.
JOHN WM. CHAPMAN,
President of the Senate.
EDWARD E. FERNANDES,
Secretary of the Senate.

Gold Supplies

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 29, 1959

Mr. PHILBIN. Mr. Speaker, in view of the heavy drafts upon the gold supply of the United States as the result of adverse foreign trade balances, monetary and currency readjustments and the like, it is interesting to note the mounting pile of gold bricks in the vaults of Moscow's Gosbank, the state bank of the Soviet Government as reported in a recent news article from London by writer, Mr. Peter Grose. In this dispatch the view was expressed that some British financiers suggest that this increasing Russian gold supply may be a new weapon in Soviet economic warfare which could be unleashed against the capitalist countries at any time and disrupt their economies.

These experts, the article continues, can see no other plausible explanation for the quiet but steady Soviet accumulation of gold reserves at great cost to the Soviet economy. A leading British authority on international commerce, Mr. Paul Einzig, believes that the Soviet Government is determined to hoard a

large gold stock for the sake of the economic and political power the possession of such a reserve entails. He declares that how the Soviet intends to use that gold is anybody's guess.

At the end of 1958 the Soviet Union was believed to hold between $7 and $8 billion worth of gold, a reserve second in the world only to the U.S. stockpile.

The pertinent question is: Why does the Soviet Union pile up this gold? They never spend it for foreign purchases if they can help it.

Experts are quoted as saying that there is little doubt that a sudden well planned dumping of large amounts of new gold into the delicately balanced world economy could wreak havoc.

If this should occur, dire consequences are feared. Trade payments would be upset. Prices in the free world could skyrocket. Banks might have to close their doors against a runaway demand for cash. Currency systems could be fatally debased by a galloping inflation, it is asserted.

Mr. Gross states that some international financiers say that it is farfetched to expect the Soviet Union to act in this way. The Soviet economy, they say, would suffer along with capitalistic countries from an overturning of international finance.

The fact remains that the Soviet is giving top priority to their own gold production, inefficient and expensive though it is. A British expert estimates that it costs the Soviet Union $166 to produce each ounce of gold—nearly five times the $35 an ounce gold is worth in this country.

Since there are marked disparities between the price of gold that prevails in the United States and various world market prices, and the drains on our gold supply still continue, the appropriate committees of the Congress should immediately look into this vital matter in order to ascertain all the facts and determine whether changes in American policy with respect to the use of our gold supply are not indicated by the growing Russian supply of gold and the declining U.S. supply of gold.

Our committee should also address themselves, I strongly believe, to a careful and close analysis of the reasons lying behind present transfers of the gold supply, particularly with reference to the impact of current American trade policies upon this situation, and the official policy of the Government regarding gold, monetary and currency problems.

I want to make it abundantly clear that I do not believe transfers of gold reserves per se are necessarily injurious or harmful to the economy of this country. I do feel, however, and believe this view is supported by authorities in the field that we cannot afford to view with complacency the marked increase in the Russian gold supply at a time when our own gold supply is materially decreasing, nor can or should we ignore current unfavorable trade balances.

Personally I believe that Congress cannot act too quickly to develop a more complete understanding of this entire situation and take such action as may be indicated by the result of its studies.

Illinois General Assembly Urges Continuation of Construction of Interstate Highway Program Without Interruption

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolution adopted by the House of Representatives of the State of Illinois:

HOUSE RESOLUTION 143

Whereas it was declared by the Congress in the Federal Highway Act of 1956, to be essential in the national interest to provide for the early completion of the National System of Interstate and Defense Highways, to meet the needs of local and interstate commerce, the national and the civil defense; and

Whereas the Congress has committed the Federal Government to the program of completing the National System of Interstate and Defense Highways by setting forth the authorizations for appropriations for a 13-year period in the 1956 act and making subsequent appropriations therefor; and

Whereas the State of Illinois, along with the components of the highway construction industry, consisting of labor, contractors, material producers, and equipment manufacturers, have at great expense enlarged their facilities to accomplish the task within the time limit set by Congress; and

Whereas after 3 years of intense effort the State and the many components of the highway construction industry have reached a point where the program is being executed expeditiously and economically; and

Whereas it has come to the attention of the House of Representatives of the 71st General Assembly of the State of Illinois that no provision has been enacted by Congress for financing the apportionment of Federal interstate funds authorized for fiscal year 1961; and

Whereas if no apportionment of Federal interstate funds for the fiscal year 1961 is made within the next 2 months the award of contracts for interstate construction in Illinois will be suspended after September 14, 1959; and

Whereas the economic impact of the suspension of contract awards will be disastrous to the components of the highway construction industry consisting of labor, contractors, material producers, and equipment manufacturers, who have enlarged their facilities to accomplish the program; and

Whereas the interruption of the program will result in delaying the completion of this vitally necessary System of Interstate and Defense Highways, and will also result in widespread unemployment: Now, therefore, be it

Resolved by the House of Representatives of the 71st General Assembly of the State of Illinois, That the 86th Congress of the United States be respectfully requested and urged to take the steps necessary to insure the continuation of the program for constructing the National System of Interstate and Defense Highways without interruption and without stretch out; and be it further

Resolved, That the secretary of state is directed to send a copy of this preamble and resolution to each of the Members from Illinois in the Senate and House of Representatives in Congress of the United States.

Adopted by the house, June 24, 1959.

PAUL POWELL,
Speaker, House of Representatives.
CLARENCE BOYLE,
Clerk, House of Representatives.

World Peace and World Law

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. FULTON. Mr. Speaker, I want to call attention to the excellent editorial of Thursday, July 23, 1959, contained in the Pittsburgh Catholic, the official publication of the Diocese of Pittsburgh, Pa., serving the counties of Allegheny, Beaver, Butler, Greene, Lawrence, and Washington, Pa. It is published by the Pittsburgh Catholic Publishing Associates; Most Rev. John J. Wright, D.D., president; Rev. Daniel H. Brennan, secretary; and John G. Deedy, Jr., editor.

This editorial entitled, "World Peace and World Law," effectively comments as follows:

Our goal is a real peace, and a peace with any degree of permanency can best be achieved through a code of law and justice which, while it protects the claims of national patriotism, effectively removes the international tensions which breed discontent and spark wars.

The full editorial follows:

WORLD PEACE AND WORLD LAW

Sixteen House Members introduced into Congress last week a resolution aimed at promoting world peace through world law. Senate Concurrent Resolution 52 calls for a revision of the United Nations Charter so as to develop and guarantee a rule of international law "in the limited field of war prevention." The resolution, which was presented by Senator JOSEPH S. CLARK, of Pennsylvania, on behalf of his Senate colleagues, askes that a conference for the reviewing of the charter toward this end be held not later than December 31, 1962.

Despite its restricting phraseology, Senate Concurrent Resolution 52 is bound to stir up the antagonists of all who see any type of world court or world law as a threat to the sovereignty of the United States. But the fact of the matter is that good or not, the resolution reflects thinking in a direction that is inevitable. Disputes between nations must be settled by rule of law, not rule of war; the question is no longer whether world law is necessary, but how.

The late Senator Robert Taft documented this point of view in commenting once on some of the problems of an international organization. "I d not see how we can hope to secure permanent peace in the world except by establishing law between nations and equal justice under law," Senator Taft declared. "It may be a long, hard course, but I believe that the public opinion of the world can be led along that course, so that the time will come when that public opinion will support the decision of any reasonable, impartial tribunal based on justice."

Vice President NIXON, in a talk last April 13 before the Academy of Political Science, spoke his conviction that "the time has now come to take the initiative in the right

direction of establishment of the rule of law in the world to replace the rule of force." Mr. NIXON commented that this logic reflected "the steadfast purpose of the President and the wholehearted support of the Secretary of State and Attorney General."

Church officials as well as political leaders have also given their blessing to an international legal system. Richard Cardinal Cushing, of Boston, some months ago told a regional conference of the American Bar Association's World Peace Through Law Committee that the committee's objective "may well be the most significant of our times, for it can set the pattern of the future of the world."

We review these statements now, not by way of extending blanket endorsement to Senate Concurrent Resolution 52, but to second that which it seeks to accomplish, a rule of law in the world community. We feel that this end can be realized without jeopardizing one's independence or sacrificing one's prerogative to settle in one's own courts any and all domestic problems. Whether Resolution 52 is the ideal or even adequate means to this end is something we leave to our legislators and their advisers. We wish merely to reemphasize that the time has come to put aside hatred and distrust of the past. Our goal is a real peace, and a peace with any degree of permanency can best be achieved through a code of law and justice which, while it protects the claims of national patriotism, effectively removes the international tensions which breed discontent and spark wars.

Poison in Your Water—No. 147

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 29, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Allentown (Pa.) Call-Chronicle of April 26, 1959, entitled "Oil Pollutes Creek, Trout Kill Severe":

OIL POLLUTES CREEK, TROUT KILL SEVERE

Fuel oil from a broken pipeline was held responsible for killing an unknown number of trout in Little Martins Creek north of Easton yesterday.

Miles D. Witt, Hellertown R. 1, area fish commission representative, called the fish kill severe in Little Martins Creek. Some fish were believed to have died in Martins Creek below its junction with Little Martins Creek, he said, but he was uncertain whether the oil had affected aquatic life in the Delaware River below the creeks.

The pollution forced a temporary shutdown of the Easton water filtration plant on North Delaware Drive at 5 p.m. Friday when the State sanitary water board advised the city of the condition.

SITUATION CLEARS

The situation had cleared by morning and plant operation was resumed early yesterday afternoon, Robert E. Crawford, Easton city chemist, said. There was no perceptible water shortage since plenty of water was available in the city reservoirs, he said.

Although the oil could have caused a distinct odor and taste in the water, it would have had no poisonous effect, Crawford said. Fortunately, it was eliminated before it got into filter beds.

Witt said a 6-inch underground pipeline carrying No. 2 fuel oil broke Wednesday on the farm of Frank Barbas, north of Martins Creek. The break was caused by a bulldozer owned by Joseph Beers, Richmond contractor, as it was cutting a road into a field. The line is owned by Tidewater Oil Co., according to Witt.

The Facts About the Chamber of Commerce Statement on the Labor Reform Bill

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 29, 1959

Mr. BRADEMAS. Mr. Speaker, within the next few days the House of Representatives will vote on one of the most important issues before Congress this year, labor-management reform legislation.

Because of the importance of this legislation, Members of Congress will naturally want as honest and factual a presentation of the issues involved as they can get.

As one of the members of the Committee on Education and Labor, which for several weeks worked on this problem, I was distressed to see the recent Washington report, dated July 24, of the Chamber of Commerce of the United States concerning H.R. 8342, the bill reported by our committee and introduced by the able gentleman from Alabama [Mr. ELLIOTT].

The chamber of commerce report, which was inserted into the CONGRESSIONAL RECORD of July 27 by Senator GOLDWATER, gives a serious distortion of the bill reported by the House Education and Labor Committee. Each sentence contains a faint germ of truth slanted to give a completely false impression. The following memorandum therefore takes up each assertion in the report and provides the facts concerning it:

Assertion: "The bill fails to outlaw organization picketing. * * *"

The facts: H.R. 8342 does outlaw much organizational picketing. It outlaws all organizational picketing for 9 months after the employees have had a chance to vote in a union election. The bill also outlaws organizational picketing during the term of a collective bargaining agreement with another bona fide union which represented the employees when the contract was negotiated.

Assertion: "The bill fails to outlaw * * * secondary boycotts. * * *"

The facts: Secondary boycotts are already unlawful under the Taft-Hartley Act. H.R. 8342 closes the major gap in the present law by outlawing "hot cargo" clauses between common carriers and the Teamsters Union.

Assertion: "The bill sanctions boycotts in the construction industry."

The facts: Most secondary boycotts in the construction industry remain unlawful. The only change made by the bill is to permit construction employees to engage in picketing at the scene of a labor dispute—a privilege now enjoyed by employees in other industries.

Assertion: "It nullifies the hot cargo ban in the Senate bill by providing that a common carrier may refuse to provide service where there is a labor dispute."

The facts: This statement is inaccurate for two reasons. First, H.R. 8342 does not change the meaning of the "hot cargo" ban in the Senate bill. Second, H.R. 8342 does not authorize a common carrier to refuse to provide service anywhere. The chamber of commerce report has distorted a proviso which provides that the bill shall not be construed to compel employees to cross primary picket lines. The proviso does not apply to secondary boycotts. Common carriers would continue to have a common law and statutory duty to provide service.

Assertion: "It sweeps aside all State jurisdiction and requires the National Labor Relations Board to handle all disputes even those involving firms which have only a single employee."

The facts: H.R. 8342 does not change the existing rule concerning State jurisdiction. Under the present law States may not take jurisdiction over labor cases which affect interstate commerce. The NLRB has jurisdiction today but it refuses to handle cases involving very small employers and employees with the result that they have no tribunal to which they can take their cases. H.R. 8342 corrects this unfairness by directing the NLRB to hear such disputes.

It is also untrue to say that the NLRB is required to take cases involving only a single employee. The Board has never certified one man bargaining units. Nothing in the bill affects this rule.

Assertion: "The bill destroys the right of a member to sue a union or its officials by requiring the member first to exhaust his remedies under the union's rules unless there is no decision for 6 months."

The facts: The bill does not destroy any right which a union member now has to sue his union. Section 603 reads, "nothing in this act shall take away any right or bar any remedy to which members of a labor organization are entitled under * * * other Federal law or law of any State."

There are only two exceptions: (i) cases in which the member voluntarily chooses to proceed under the new law to invalidate a trusteeship and then loses, where it would be unfair to allow a second suit; and (ii) challenges to past union elections.

It is true that some of the new remedies provided by the bill cannot be asserted until the member has invoked his remedies within the union and gotten no relief for 6 months. What the chamber of commerce report does not tell the reader is that this is a rule which the courts have applied to every kind of organization for a hundred years or more without the six months' limitation. Its purpose is to encourage responsible self-government giving the organization's officials a chance to straighten out any wrong. If they refuse, then the member may go to court.

Assertion: "* * * the bill does not permit the Secretary of Labor to require sound accounting practices in the [financial] reports."

The facts: Section 208 reads: "The Secretary shall have authority to issue * * * rules and regulations prescribing the form and publication of reports * * *." Obviously this does permit him to require reports on an approved form. The grain of truth which the chamber report has distorted is that the bill does not authorize the Secretary to impose a system of accounting upon labor unions. There are many sound methods of accounting. There is no more justification for imposing a uniform set of accounts upon all labor unions than there is to prescribe the form in which all businessmen must keep their books.

Assertion: "The bill imposes no standards on a union regarding its financial dealings."

The facts: The bill does impose the highest fiduciary standards on union officers in their financial dealings (sec. 501(a)). It also requires the union itself to disclose how its money is spent. Regulation of authorized union expenditures is not in issue.

Assertion: "The bill limits a member's access to union reports by permitting the union to make the information available to him in any fashion the union chooses."

The facts: The fact is that the bill gives each and every member not only unlimited access to reports but also a right to examine all union books and accounts for purposes of verification. Section 201(c) requires every labor organization to "make available the information required to be contained in such report to all its members. * * *" Section 208 instructs the Secretary to issue regulations governing the publication of reports; thus the Secretary would decide the form in which a report must be published to the members.

The statement that the bill limits a member's access to union reports is untrue for a second reason. Section 205(a) reads, "the contents of the reports and documents filed with the Secretary * * * shall be public information." It is obvious, therefore, that no member's access to a report can be limited by the union. Furthermore, section 205(c) requires the Secretary to furnish copies of any report filed with him to any person upon payment of the trifling cost of preparing the copy.

Section 201(b) puts every labor union and its officers under a duty to permit any member for just cause to examine any books, records, and accounts necessary to verify such report.

Assertion: "The bill permits a union or an employer to pay the cost of defending any official charged with violating the act."

The facts: This statement is true. Of course, it is also true that corporations are permitted to pay the defense costs of officers charged with violating the Sherman Act or the Fair Labor Standards Act. Union members will be free to decide whether they wish to pay these costs or not.

Assertion: "The penalties for violating the reporting sections are made ineffective by the requirement that they must be willfully false."

The facts: The foregoing statement is a half-truth. The criminal penalties apply to wilful failures to file a report. The bill also punishes as a crime any false statement made by a person who knows it to be false and any knowing omission of information. Would the chamber make it a crime to file a report which the union officials believe to be true but which turns out to include an unintentional misstatement?

Assertion: "While purporting to eliminate 'blackmail' picketing, it merely restates weakly some of the prohibitions already contained in the Hobbs Act."

The facts: This assertion is based upon a deliberate distortion of the term "blackmail picketing." Secretary Mitchell and others call any picketing for organizational purposes "blackmail picketing"; then, because the bill does not forbid all organizational picketing, they say that the bill does not prohibit "blackmail picketing." Blackmail implies some kind of extortion. The bill does forbid any picketing about the premises of any employer "* * * as part of any extortionate plan or conspiracy for the purpose of taking or obtaining any money or other thing of value from any employer." Therefore the bill does prohibit blackmail picketing in any true sense.

The provisions in the bill regulating organizational picketing were explained above.

Assertion: "The bill fails to establish any standards for conducting an honest union election at the intermediate or national union levels except for the requirement of a secret ballot."

The facts: This is obviously not the case. The bill imposes the following requirements:

1. Section 401(d): "A reasonable opportunity shall be given for the nomination of candidates."

2. Section 401(d): "Every member in good standing shall be eligible to be a candidate and to hold office (subject to * * * reasonable qualifications uniformly imposed) and shall have the right to vote * * * without being subject to penalty, discipline, or improper interference or reprisal of any kind."

3. Every member is guaranteed 45 days' notice of the time and manner of making nominations and also of the place and date of the election (sec. 401(d)).

4. No member whose dues have been checked off by his employer may be denied the right to vote because the employer has not paid the money over to the union (ibid).

5. In an international election the results of the voting in each local must be published separately (ibid).

6. All records pertaining to the election must be retained for 1 year (secs. 401(d) and (e)).

7. Union money may not be contributed or applied to promote the candidacy of any person (sec. 501(f)).

8. Each candidate is given the right to have an observer at the polls in a local election (sec. 501(b)).

9. Each candidate is given the right to have an observer at the counting of the ballots in a local election.

10. In addition to the foregoing requirements it will be a violation of the Federal statute for the union not to conduct the election in accordance with its constitution and bylaws. The chamber's assertion, "The union constitution and bylaws govern * * *" is another half truth. Section 501(d) provides that they shall govern insofar as they are not inconsistent with the provisions of this title.

Assertion: "There is no provision giving candidates access to membership lists in elections at the international level or for an honest count of ballots."

The facts: This is a very technical interpretation. The bill gives every bona fide candidate a right to the list of members of a labor organization subject to a union shop agreement. The bill also gives every candidate the right to have an observer at the polls and at the counting of the ballots. These requirements are in a section the first sentence of which deals with local union elections. A fair-minded statement would have pointed out that the second and third sentences might also be held applicable only to local union elections and would have suggested that the mistake in draftsmanship should be corrected.

Assertion: "A union member is required to exhaust internal union remedies for at least 6 months before going to court to upset a fraudulent election."

The facts: It is a familiar legal principle that members of a church, club, labor union, or other voluntary association must invoke their remedies within the organization before going to court. This rule is designed to encourage responsible self-government. If officers of a local union conduct an unfair election, the proper course is to appeal to the international union whose more experienced officers may have expected to correct any wrong. If they fail to act promptly, then is the time to go to court. Furthermore, the requirement does not have to be met where the internal remedy would do no good because those to whom the member would have to appeal have been engaged in the wrong.

Assertion: The bill does not bar all criminals from union office.

The facts: We do not think that every man who commits a felony should be barred from his livelihood. For example, the chamber report complains of the failure to include manslaughter in the list. A man may be convicted of manslaughter because of an automobile accident. The list was drawn up with a view to including those crimes which are related to misconduct as union officials.

Assertion: "The fiduciary responsibility of union officials is limited to take into account the special problems and functions of a labor organization."

The facts: The bill imposes upon labor union officials the responsibilities of a fiduciary. The exact application of general fiduciary principles always takes into account the nature of the enterprise. A corporate director is not judged in exactly the same fashion as a family trustee, but both are subject to the highest standards of fiduciary responsibility. The bill establishes exactly the same test for union officials.

Assertion: "A union official is left unaccountable for profits reaped while using his office (not union funds) to his personal advantage."

The facts: This is a complete misrepresentation. Section 501(a) explicitly requires union officials "to account to the organization for any profit received by him in whatever capacity in connection with transactions conducted by him or under his direction on behalf of the organization." The same section also forbids a union officer "from holding or acquiring any personal interest which conflicts with the interests of such organization." Section 501(b) authorizes an individual member, when these rules are violated and the union fails to sue, to bring a suit "to recover damages or secure an accounting or other appropriate relief for the benefit of the labor organization."

Assertion: "The bill sanctions a virtual closed shop in the building trades, circumventing State right-to-work laws."

The facts: This too is a misrepresentation. Section 702(b) explicitly provides that nothing in the section to which the chamber refers shall be construed to override any State right-to-work law. Furthermore, the bill does not change the Taft-Hartley provisions outlawing the closed shop.

Assertion: "The bill permits lawfully replaced strikers to vote in representation elections."

The facts: This statement is true. We think that a worker who is on strike has a sufficient interest in the choice of representatives to vote in a labor board election. President Eisenhower has also recommended a change in the present law.

World Refugee Year

SPEECH

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8385) making appropriations for mutual security and related agencies for the fiscal year ending June 30, 1960, and for other purposes.

Mr. TOLL. Mr. Chairman, I am glad that the House included the item for the World Refugee Year in the mutual security appropriation bill.

Among the many supporters of this program is the American Jewish Committee. I believe the committee's statement, as adopted at its 52d annual meet-

ing in New York on April 19, 1959, is worthy of the attention of every citizen and include it below:

STATEMENT ON WORLD REFUGEE YEAR BY THE AMERICAN JEWISH COMMITTEE AT 52D ANNUAL MEETING, APRIL 17–19, 1959

By a resolution adopted on December 5, 1958, the General Assembly of the United Nations declared the year beginning July 1, 1959, as World Refugee Year. It laid down the following as the goals of the year: (a) To focus interest in the refugee problem and to encourage additional financial contributions from governments, voluntary agencies, and the general public for its solution; (b) to encourage additional opportunities for permanent refugee solutions, through resettlement or integration, on a humanitarian basis and in accordance with the freely expressed wishes of the refugees themselves.

It asked the member states of the United Nations and the specialized agencies to cooperate, in accordance with the national wishes and needs of each country, in promoting a World Refugee Year as a practical means of securing increased assistance for refugees throughout the world.

In issuing the call for World Refugee Year, the General Assembly directed attention to the plight of all refugees throughout the world. It sought thereby to awaken the world's conscience to the need for urgent measures to solve or alleviate the problems of 30,000 in European camps, where some have spent a whole decade; 100,000 Europeans, likewise unsettled, though not in camps; a million Palestine Arab refugees; a million refugees from the Chinese mainland in Hong Kong; 60,000 or more Chinese in Macao; 170,000 Algerians in Tunisia and Morocco; 9,500 Europeans still trying to get out of Communist China; Jewish refugees from Egypt; Chinese refugees in Thailand and Laos; Tibetan refugees in India and Nepal; and displaced millions in India, Pakistan, Korea, and Vietnam.

The whole world is heartened that the United Nations has directed attention in this dramatic way to the sufferings and problems of the homeless victims of political and social dislocations and upheavals. We pledge our support toward realizing the aims of the Year, and urge that our Government and citizens organizations throughout the country do likewise.

We are pleased by the manifestation of support in the recent formation of the U.S. Committee for Refugees. That committee has called on our Government to appropriate additional funds and allocate surplus commodities for refugee aid programs, and on voluntary agencies to raise funds for their own refugee aid programs over and above their present budgets. It has also called upon our Government to admit annually 20,000 additional refuges outside existing quotas. Preliminary press reports indicate that the Government's program will be more modest than that urged.

These proposals exemplify the kind of measures governments and voluntary organizations can undertake for implementing the goals of the year. We welcome these proposals, limited though they are, but we hope that the Government and the public will make contributions that are more generous and more significant.

We feel that only if the nations introduce fundamental changes in their immigration policies will the refugee problem near solution. Therefore, we express our regret that our own Congress has failed up to now to embody in our law revisions along the lines urged by the President of the United States and by leading Members of Congress of both parties. These recommended revisions are based on the recognition that our present immigration laws reflect an attitude of distrust toward aliens, discriminate unjustly on grounds of the racial and national origins of aliens, and impose a self-defeating rigidity on efforts to promote our foreign policy and to perform effectively our role as leader of the free world.

We reaffirm our dedication to the goals of an enlightened and liberal immigration policy, and we hope that Congress will in the near future take such action as is necessary to bring this vital aspect of our policies into consonance with traditional American ideals. This would be the wisest and most dramatic contribution our country could make to the observance of the World Refugee Year.

Banks—Interest Rates—The Public Interest

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. FLYNN. Mr. Speaker, 5 years ago, the Government sold 1-year notes at an interest rate of 1⅛ percent; now it is paying 4¾ percent. It is predicted that the rate will go to 5 percent in the near future.

The interest rate of the Federal Reserve bank was recently increased from 3 to 3½ percent. It is said that the date has already been set for the Federal Reserve bank to raise the interest rate from 3½ to 4 percent. This is only a few months away. Interest rates for private and commercial borrowing are rising. Interest rates to municipalities are rising. The Treasury Department is paying $6 billion a year more at the present rate of interest to finance the public debt than it did a year and a half ago. The Treasury Department is asking to have the interest ceiling removed which would result in added interest of at least $6 billion more.

David Lawrence, in his column of last week, stated that the Democratic Party Members in Congress are blocking this action. I am proud to be one of those Democrats. Interest rates on mortgage money for home building now requires higher interest rates and it is going higher. This can bring the building boom to a sudden stop and cause great unemployment and a turndown in the building industry. Many banks are already charging 7 percent interest on private loans. Increases in wage rates are being demanded to meet increased costs. This Congress is being asked by our Chief Executive to feed the present inflation by authorizing an increase in the public debt interest rate.

The Chief Executive has made no patriotic call to the citizens to use their savings to purchase Government bonds. The bankers and moneylenders are benefiting from the added interest. They are giving nothing additional in services or commodities for the extra money they are receiving. The high interest dollars paid to them are inflationary dollars. The Federal Reserve Bank is increasing the interest rate to its member banks. The effect is an increase in the interest rate throughout the country. The Federal Reserve Bank is insisting that all people compete with each other, with the Federal Government and with municipalities for an insufficient supply of money in the money market. The only result can be that many people will be unable to get needed money for their business or personal needs. This may well result in business failure and bankruptcy on a wide scale and the present boom can turn into a bust. It was only a short time ago that here in Congress we were worried about a depression. Now we seem to think that prosperity is here to stay.

While we talk about prosperity, we still have many unemployed. We have depressed areas and the depressed area list continued to grow rather than get smaller. We well know that if it were not for the $40 billion defense program that there would be more depressed areas in this Nation. The income of the farmer is many billions of dollars less than it was a few years ago and many farmers are finding it impossible to continue their operations. Small farmers and businesses across the country are being forced out or are being absorbed through mergers with larger concerns.

The people back home in our districts realize these facts while we here in Washington are told about the great prosperity that exists. We here in Washington are asked to feed an inflation in the face of these facts by permitting higher rates of interest to be paid by our Government to the tune of $6 billion a year. I say that the people of this country are opposed, in overwhelming numbers, to the interest increase. It is the bankers and the moneylenders who demand this increase. If we are voting in the interests of our constituents, we should vote against an increase in the interest rate on our national debt.

Poor Mouth

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 27, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial from the Machinist:

POOR MOUTH

We hear it every time we go into negotiations; management tells us how poor the company is. Rich relatives tell us how broke they are—for fear we'll touch them for a loan. We hear it when somebody is taking up a collection. It's called poor mouthing. And, we're going to be hearing a lot more of it from Washington. We're going to hear that the richest nation on earth is too poor.

We heard it from President Eisenhower last week when he vetoed the housing bill. He said the country couldn't afford to continue a major slum clearance program. He and others in Washington have decided that poor mouthing is good politics.

They want us to believe that the country is too poor to repair our public school system, too poor to expand our airports, too

poor to organize a decent hospitalization program for the aged, too poor to continue building better roads.

Of course, they dont "poor mouth" what they believe in. Take foreign aid, for example. They believe in foreign aid, as we do too. We can afford that. But, they don't believe our Government should also spend money on projects to help the American people live better. They tell us we can't afford them. They feel that if a person wants to live better he should work harder, write a book, buy stocks and bonds, or inherit a fortune—like they did.

So they poor mouth us with a thing called the balanced budget. We all know about family budgets; we know our family budget has to balance or we'll go broke. They tell us we have to balance our Government budget or the country will be bankrupt.

What they don't tell us is that when they balance the Government expenditures against income, they don't give a nickel's credit to Government assets. The Government spends money to build a big dam, a public housing project, or a school. They want all those capital improvements paid for out of current income.

That's not the kind of budget balancing they use for industry. When a corporation wants to build a new plant or buy out a competitor, it usually borrows the money by selling stocks or bonds. They don't call it deficit financing, they call it raising capital.

The national debt is no more a sign of national bankruptcy than the stock market is a sign of business bankruptcy. A company is successful and sound when its customers are pleased; a government is successful and sound when its people are well cared for and happy. The richest nation on earth can afford to clear its slums and any other Government service its people want. Let's not let them poor mouth us out of it.

Congressman and the Polish Cause

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 21, 1959

Mr. PHILBIN. Mr. Speaker, last month my good friend, Francis Mleczko of Webster, Mass., gave a courageous and forceful speech on the Polish cause over Radio Station WESO in Southbridge, Mass.

In his eloquent remarks, Mr. Mleczko touched upon my humble efforts over the years in behalf of the gallant Polish people and their fight for freedom and liberation. I am indeed thankful to him.

Under leave to extend my remarks in the CONRESSIONAL RECORD, I include the text of Mr. Mleczko's address over WESO on June 7, 1959.

The material follows:

CONGRESSMAN PHILBIN AND THE POLISH CAUSE

Ignace Paderewski, the excellent Polish statesman and world renowned pianist, with his political wisdom and with his enchanting music, exerted tremendous influence on President Woodrow Wilson during First World War and also after its conclusion. Under the influence of Paderewski's music, President Woodrow Wilson constantly pondered in his mind the Polish villages and cities, which were drowning in tears and blood under the burden of years of bondage, devastated with sword and fire by their greedy and selfish neighbors: Prussia, Austria, and Russia.

Sensitive of human plight, President Woodrow Wilson, a statesman with a just and noble heart, learned about the country of our forefathers and grandfathers, and, when the time of decision arrived, he gave his friend Paderewski and his countrymen the greatest of all gifts: Poland—free and independent Poland. He guaranteed the freedom and independence of Poland in the Versailles Treaty in the famous 13th paragraph reintroducing Poland into the international arena after well over 100 years of bondage. President Woodrow Wilson became the idol of the Polish people. Faith in historical justice and the deep confidence that all evil some day will find its end, finally triumped. Every Polish child of school age had a great admiration for the American Nation and everlasting esteem and honor for its great and noble President. President Woodrow Wilson had occasion to visit the capital of Poland, Warsaw. The result of his visit was material help and food from the United States of America so vital to Poland's continued existence in the world of free nations.

After 20 years of fantastic rehabilitation, the young Polish state once again was subjected to humiliation by the same greedy and selfish neighbors, Germany and Russia. In 1939 Poland was again crucified and ferocious ravens tore her flesh swiftly even as her last breath of life was ebbing.

The epic of the tortured Polish nation immensely impressed President Roosevelt. President Roosevelt, in his manifest, calling for mobilization of all powers against Teutonic tyranny and barbarism, declared Poland the inspiration of all nations and asserted that such a nation cannot perish. Unfortunately, after a few years the greatest drama, the greatest tragedy in world history took place. The same President, for reasons, which only history will read, either under the burden of his sickness or under the influence of his ill-advised White House staff, failed to realize the greed and rapacity of Stalin, and, disregarding the fact, that the Polish soldiers fought valiantly in all sections of the front, allowed Poland to be seized once again by the Red communistic hand of Stalin.

Therefore, we are looking today to the friends devoted to Poland, friends who could achieve an insight into her situation as well as into the situation of other countries in Europe, similarly occupied by Russia, and who could in the right moment follow the sample of President Woodrow Wilson.

Our researchers are at constant work. We scrutinize every word spoken in defense of Poland by individual Senators and Congressmen.

With pleasure we state that among the proven and warm friends of Poland we can rely on our Congressman from Massachusetts, PHILIP J. PHILBIN.

Congressman PHILBIN, well known from numerous movements in the Polish cause during World War II, does not stop his work for Poland's welfare and on every possible occasion gives deep understanding of the exceptional situation in which the Polish nation now exists. What is more, he sees clearly the injustices which the Allies have done to their truest and most faithful partner.

During the past few weeks, Congressman PHILBIN asserted himself honorably on two occasions on the floor of Congress for the Polish cause.

By his speech in the House of Representatives he saved from deportation 60 Polish sailors, who, 4 years ago, escaped from a Polish ship to Formosa and then found asylum in United States of America. This year all these seamen were notified about pending deportation to Poland because of the present progressive improvement in the general situation, because of the so-called communistic thaw in Poland after October 1956.

Congressman PHILBIN, as an experienced statesman, demonstrated in his speech the communistic government imposed upon Poland, upon the Polish people known for their love of peace. In that speech he pointed out that the individual living conditions in Poland are deteriorating from day to day, contrary to the news spread by false propaganda. Individual rights, which are so jealously guarded here by the Constitution are there brutally and ruthlessly trodded upon. Here the highest law is the Constitution; over there the law of the mailed fist. He recalled among other things: (1) The recent unprecedented raid on Jasna Gora, the monastery of the Pauline Fathers in Czestochowa, (2) the ban to distribute by church auspices the gift packages received from America from the National Catholic Welfare Council, (3) the removal of crucifixes from schools and public buildings, (4) the suppression of rights of speech and press.

As a truly great friend of Poland, Congressman PHILBIN concluded his remarks with an unusually strong appeal to the President of the United States of America and to the Government to abandon threats and proceedings about deportation of the Polish sailors and to continue the principle of offering asylum for the brave and unfortunate people of oppressed nations.

The day May 18, is a great day for all Poles scattered all over the world. It is a day on which the Polish soldier conquered the seemingly unconquerable German fortress on Monte Cassino in Italy 15 years ago. Congressman PHILBIN kept that in mind, too. On that day he delivered a flaming speech in the House of Representatives. He reminded all Congressmen that, thanks to the sacrifices of the Polish soldier, the final victory over the Germans was accelerated, but Poland herself went from one bondage to another.

Congressman PHILBIN in his daily work helps individual Poles in an apparent and friendly way. A wise philosopher says: "The friend in need is the friend indeed." Congressman PHILBIN has proved to be a true friend, indeed. Moreover, his frequent efforts in the Polish cause encourage us to feel that Congressman PHILBIN, like President Woodrow Wilson, in his nobility and righteousness, has before his eyes the vision of a free and independent Poland.

May the Almighty God bestow upon him health and give him inspiration in his valiant fight for the righteous cause of Poland.

May God grant him wisdom and courage so that he may continue in his efforts to curb these cruel injustices against God and humanity.

Air for Candidates on Sensible Basis

EXTENSION OF REMARKS
OF
HON. PAUL F. SCHENCK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 29, 1959

Mr. SCHENCK. Mr. Speaker, our House Interstate and Foreign Commerce Committee has given a great deal of study to the troublesome problem of equal time for political candidates on radio and television. Recently the problem was brought into sharp focus by the ruling made by the Federal Communications Commission in its interpretation of section 315.

The committee has held a number of hearings, has discussed the subject fully,

and has reported out a bill to remedy the present situation. I hope that prompt approval of this legislation will bring about a workable solution.

A recent editorial in the Dayton Daily News calls attention to the two impossible choices existing under the present ruling. Under leave to extend my remarks in the RECORD, I include this thought-provoking editorial:

[From the Dayton Daily News, July 20, 1959]

AIR FOR CANDIDATES ON SENSIBLE BASIS

The furor over equal broadcasting time can and should be settled in Congress.

In the now famious Lar Daly-Richard J. Daley case, the Federal Communications Commission ruled that any appearance of a candidate on television constituted a "use" that must be matched with equal time for all other candidates.

This seemed to border on the ridiculous when it involved a mayor seeking reelection and when his TV appearances in question were news items lacking any element of campaigning.

Broadcasters were left with two impossible choices by the FCC interpretation. One possibility was to assume that every political officeseeker, from President down to dogcatcher, deserved the right to make a political speech every time the corresponding officeholder made news. The other was to have a news blackout on all incumbents standing for reelection.

The proposed remedy, approved by the Senate Commerce Committee, would amend the Communications Act so the equal-time rule would apply specifically to "political use." It may be argued that even straight news, by publicizing a man's name, enhances his political chances. There is an element of truth in this, but it has its own built-in equalizer; namely, that a man in office, being under constant public scrutiny, is much more vulnerable than his opponents.

The amendment is a proper one and should be acted upon promptly. Then attention should be focused on a more serious issue of equal opportunity for candidates, the laws governing campaign expenses. Present laws are so unrealistic and, for that reason, so blinked at, that the public interest easily may be compromised by election fund-raising practices.

The Mayors of America Speak

EXTENSION OF REMARKS
OF
HON. WILLIAM T. CAHILL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1959

Mr. CAHILL. Mr. Speaker, the entire country has been reading in the past week of Vice President NIXON'S visit to Russia and has been made aware by the excellent news reporting, of the attitude of the Soviet officials toward the United States and its representatives. One of the most caustic and completely erroneous statements was attributed to Premier Khrushchev, who in commenting on Vice President NIXON'S arrival in Moscow said "a representative of the panic-stricken Americans has just arrived in Moscow." This and other remarks attributed to Mr. Khrushchev indicate that he does not realize the solidarity of Americans and the unanimity of approval of our people favoring President Eisenhower's stand in relation to Berlin.

I am happy, therefore, to bring to the attention of the Congress of the United States a resolution adopted on Wednesday, July 15, 1959, at the U.S. Conference of Mayors held at the Statler-Hilton Hotel in Los Angeles, Calif.

This resolution clearly indicates that the mayors of approxiamtely 300 cities of 50,000 or more population representing as they do, both major political parties and a cross section of our people, are 100 percent behind the President and the Vice President's stand in relation to Berlin.

This should be clear evidence to Mr. Khrushchev and all of Russia of the solid backing of Americans in relation to our foreign policy.

It is interesting to note too, that this resolution was unanimously adopted and was the first of 29 resolutions submitted by the resolutions committee.

I am personally happy that the resolution was prepared by and introduced by the Honorable Alfred R. Pierce, mayor of the city of Camden, N.J. I commend Mayor Pierce and all of the mayors attending the Conference of Mayors in Los Angeles on the action taken by them. This is a clear and decisive and complete answer to Mr. Khrushchev. The resolution is as follows:

RESOLUTIONS ADOPTED BY THE 1959 ANNUAL CONFERENCE OF THE U.S. CONFERENCE OF MAYORS WEDNESDAY, JULY 15, 1959

BERLIN

Whereas the peace of the world may well depend upon the events occurring in the near future at a city far removed from this conference, the free city of West Berlin, Germany;

Whereas we strongly believe that in this age of astounding scientific development that the beliefs and determinations of our Government should be clearly understood so that no foreign government may misunderstand its intentions;

Whereas we believe that any foreign government will appreciate that an expression of opinion from this body is an expression from a group that daily meets with the people at all levels, and thus is not concerned only with matters of State or foreign policy;

Whereas we further believe that world peace should not depend upon governmental leaders playing guessing games as to another nation's intentions, respecting bluffing or nonbluffing as to foreign policy; and

Whereas we are convinced that this Nation should continue to constantly strive for world peace, but to do so by negotiation and not by appeasement; to refuse to be intimidated by threats knowing full well that though the ominous specter of atomic warfare is always present, but yet we desire to live as free men; and to have others enjoy their freedom.

Whereas, though we here assembled represent various political parties, and views, yet we serve notice that internationally we stand together as Americans on international policy of peace and good will and friendship: Now, therefore, be it

Resolved by the U.S. Conference of Mayors, That we fully support the policy expressed by the President of the United States of America concerning the free city of West Berlin, Germany, and that we believe that people, cities, or nations are not to be discarded or abandoned because some nation believes itself powerful enough that it may dictate to free men and thus to the world. Freemen remain freemen because they are willing to stand for right. This we are willing to do.

Indochina After 5 Years

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. BRAY. Mr. Speaker, there has been considerable unfavorable publicity lately regarding American expenditures in Vietnam. Unquestionably there have been errors, some of them serious. However, when I spent some time in Vietnam 6 years ago, I recall that the conditions seemed hopeless. I doubted, at that time, that it would be possible to save this area for the free world. I was again there 2 years ago and while conditions were not perfect the improvement made during those 4 years was most outstanding and encouraging. While it is important that the public be informed of the mistakes that our Government makes, it is equally important that the public be made aware of that which is good. This has been well pointed out in an editorial in the Washington Post for Sunday, July 26, 1959, which, under leave to extend my remarks in the RECORD, I am including.

INDOCHINA AFTER 5 YEARS

Five years ago the filthy war in Indochina came to an end with the armistices at Geneva. The infant nations of Vietnam, Cambodia, and Laos, which had attained only limited independence from France during the protracted struggle with the Communists, were on their own. The wonder 5 years later is not that these countries have been plagued by contradictions, handicapped by lingering colonial resentments and beset by occasional abuses in American aid programs, but that they have survived and prospered as independent nations.

Whatever their economic and governmental deficiencies, the three countries have not fallen to communism, a fearful danger in 1954. To a large extent this is no doubt the result of the allied military shield. But in considerable measure it also is the result of conscientious efforts to promote stability by building internal security and fostering economic improvement.

Cambodia, perhaps the most tranquil of the three, has gone through several changes of emphasis in its neutrality, but there can be no doubt of Prince Sihanouk's genuine wish to bring education and more representative government to his people. American aid has contributed a highway to a new port on the Gulf of Siam which should be of much economic importance. Laos, the least developed country, has never been completely free from Communist harassment. Inefficient government and maladministration of what at times has seemed profligate American aid have created difficulties; but a strong Cabinet under Prime Minister Phoui Sananikone now seems to be giving the country a sense of direction. Both Cambodia and Laos stand to benefit from international projects on the Mekong River.

Vietnam, which is the focal point of some current concern about American aid, has in many ways been in the most difficult posi-

tion of all. Divided at the 17th parallel, it had to overhaul its economy, absorb nearly a million refugees, develop a national identity under President Ngo Dinh Diem and build a government—all while protecting itself against the double menace of external Communist aggression and internal terrorism.

American military and economic aid programs in Vietnam have been very large. It is hardly surprising that in the process of readjustment there have been bumbles, even scandals. The swollen Military Establishment has had perhaps exaggerated emphasis; certainly it has impaired normal economic and political development. Some Americans tend to congregate primarily with other Americans instead of becoming part of the community. American agencies have sometimes seemed to jostle each other in competition to inaugurate programs. The annoyance of Washington-trained bureaucrats with the "locals" has sometimes made enemies rather than friends.

But it also is necessary to look at the accomplishments. Internal security, land reform and refugee resettlement efforts have, in the main been successful. Vietnam's economy is expanding. What is bad about the American aid program stems occasionally from the wrong kind of people, but in considerable part from red tape, an excess of restrictions from Washington, and a tendency to mastermind everything. One conspicuous shortcoming is the failure to place more American advisers in Vietnamese ministries where their help would do the most good. One of the prices of the independence this country is trying to encourage is that local officials sometimes will see things differently.

As Congress is implored to look critically at the aid programs, we hope that it also will keep a sense of perspective. It is easy to become outraged at what appear to be inexcusable waste and boneheaded blunders. Undoubtedly reforms are needed; many of them. But none of these young countries can be judged fairly by American standards of efficiency, development or even political liberty. The shortcomings ought to be stated but the essential counterpart is a recognition of what might have happened but for timely and friendly help.

Cross Country With the On-to-Oregon Cavalcade—XI

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1959

Mr. PORTER. Mr. Speaker, the Oregon wagon train was nearing the Oregon border when the account from July 6 through July 12 was written by Rudy Roudebaugh of Drain. Under leave to extend my remarks, I include the account, as follows:

INDIAN RAIDS, DUST, HEAT, FREE MEALS, LOTS OF "PIONEERS"

(By Rudy Roudebaugh)

July 6, 5:55: We're shoving off and is it ever cold; the wind is going right through us. We had our last visit with the Duncans Sunday having lunch with them. Ki done up our laundry at their house. Jan has started on her third set of shoes, and Doc has started with his second set of new shoes on the front. 6:13: Going through the small town of Chubbuck. 7:30: Crossed the Portneuf River. 7:35: Entering Power County and leaving Banook County. 7:57: Going by Fort Hall Indian Reservation. 9:50: stopped for water. They passed out fruit and candy.

9:05: We are on our way again. 10:52: Leaving Fort Hall Indian Reservation. They grow potatoes, wheat in this part of Idaho. They irrigate their wheat with sprinkling system. The traffic has been very heavy today. 12:50: Entering American Falls, population 1,847. 1:35: Arrived at camp under the falls. It's nice and shady and we really needed it as it sure is hot. At 6:30 we were given a turkey dinner by the C. of C. Some time in the night the Carnines from Camas Valley rejoined us. Sunday I had some relatives visit me that I hadn't seen in 25 years. Mr. and Mrs. Bert Foreman of Idaho Falls. Made 25 miles today.

Rudy Rojas and his family were also visitors Sunday. He formerly taught in Dram and has taught the last 3 years in Albany. He is now attending summer school at Idaho State College. Pocatello is his hometown.

July 7, 5:12: Left camp. Guess they are going to make an endurance contest out of this. 5:42: Hit highway 30 going along the Snake River. 7:55: Stopped at Massacre Rock and had breakfast given by the Massacre Rock Cafe. Several riders came out to meet us and brought us in.

On August 10, 1862, a band of Shoshone Indians ambushed an emigrant wagon train and killed nine white men and wounded six others.

9:01: Westward again. Janell and Claudia are driving and I'm going to try to sleep. 10:20: Four-lane highway. 12:10: Entering Casin County leaving Powell County. Poor wheat crop around here. 1:10: Arrived at camp at Rafter River and the wind is really blowing. This part of the country is called Suitcase Farmers. Ki was on cook shift today.

July 8, 5:58: Sitting here waiting again. It's sure cold, but clear. 6:10: Going west again. 6:16: Crossed Raft River. 6:27: Waited 10 minutes for Dave (Gastman) to change saddle horses. Doc got two new shoes on his hind feet last night. Land is rocky along here and very little sagebrush. 7:01: Sagebrush is beginning to be higher and thicker, but still rocky. Ki is on cook shift today. 8: You can see where they have cleared part of the ground and broke it up and planted grass, but it isn't doing very good. 9:30: Janell has been driving the last hour. I can see a few trees ahead. They look mighty good. 10:06: Stopped to water. 10:29: On our way again.

10:36: A car just went by from Yoncalla and yelled to me "I sure enjoy reading your reports in the Drain paper." Here comes two men on horses to meet us. They are ahead of the chamber of commerce of Rubert.

11:11: Leaving Cassia County and crossing the Snake River and entering the Minadoka County. 11:15: Met by the Rupert Saddle Club, the biggest group that has met us so far. 12:06: Pulled into Rupert rodeo grounds. The Rangers' wives served us dinner and the merchants furnished the food. In the evening they gave us a show at the grounds. It was the largest turnout in Idaho.

July 9, 5:55: Ready to roll. 6:05: Going west. 6:14: Crossed the Minidoka Canal. Ki and Janell are still in bed. 6:21: Entering Rubert, population 3,750. The weather has been nice and warm this morning.

Around here they grow sugar beets, potatoes, beans, peas, corn. Boy. The people are sure out taking pictures this morning. 7:55: Entering Heyburn, population 559. 8:01: Here comes the Minidoka County sheriff's posse to escort us into Burley. 8:14: Crossing Snake River again. 8:16: Entering Cassia County and also Burley, population 5,924. 8:45: Stopped for breakfast. While eating we were introduced to Miss Idaho of 1959, Joanne Ashby. The breakfast was given by the merchants of Burley.

The Latter Day Saints sang a hymn while we were eating. 10:09: Leaving Rubert. 10:29: Crossing the Snake River from Cassia County back into Minidoka County. 10:35: Challenge Gerome Corp. Creamery gave each wagon one dozen ice cream bars. We passed them out to children along the road. 11:15: Stopped to water, but Doc and Jan drank very little. 11:35: Leaving our rest period.

12:02: We are entering the reclamation area that was opened for homesteaders. The women all got together at the last minute and had potluck dinner for us. I mean they really had wonderful food. I would say they are about 300 to 400 homesteaders. They have developed this ground in the last 3 years. Wheat makes 100 bushels to the acre and other crops are also doing well. This land used to be sagebrush. We are on gravel road. 1:20: Entering Jerome County leaving Minidoka. 1:25: Arrived at camp at the M. Palmer farm. Talk about dust after the cars and wagons and mules done a little stirring up we really had a mess and we still haven't got it out of our beds and clothes.

July 10, 5:57: Waiting on Roy again this morning. 6:10: Going west. 7:09: Leaving the homestead area, going on highway 25. 7:37: Crossing Milner Canal. 7:54: Going by Greenwood Service Station. 7:59: Crossing north side of canal. Looks like half of the water from the Snake River is running in the canal about 75 feet wide. 8:03: Pulled off highway 25 on gravel road. Weather clear and warm with no wind. 9:48: On oil again. 10:13: Stopped to water on the Albertson ranch. Doc and Jan drank two pails of water each. 10:29: Westward again. 11:44: On highway 50. 11:25: Leaving Jerome County going over Hansen bridge which spans a 375-foot canyon with Snake River at the bottom. Ki was really scared, but Janell is getting to be an oldtimer like me. It didn't bother her at all, and the mules made out just fine. The bridge is held up by 6½-inch cable. Entering Twin Falls County. 1:06: Arrived at camp at the Bruce Luloff farm.

We went to town and had baths in tubs at the Park Hotel. The Daughters of the Utah Pioneers are serving us dinner. All pools and theaters are free for the whole wagon train personnel. We have a beautiful campsite, shady and lots of water around us. Made 24 miles today.

July 11, 6:25: They are holding us up a half hour this morning because two Indian chiefs flew here to give us word the Indians would be friendly in Pendleton and we'd have safe passage. 7:29: Entering Twin Falls, population 20,500. We have been escorted by the Twin Falls sheriff and deputies all the way from camp. They also will take us to camp today. 7:55: The Indian chiefs met us at the 12th Avenue. Shoshone Carol Chugg rode with me today. She wore one of Ki's dresses and the Indians tried to take her from the wagon. 9:15: Here comes Carol's husband to pick her up. 9:31: Going over the old bridge over Cedar Creek. 10:16: Stopped to water. Jan and Doc drank two buckets of water apiece. It's about 97°. Ki is in town doing the laundry. 11:10: Left the oil. 11:47: You can see where the Oregon Trail went through the fields. 12:37: Back on the oil roads. 1:22: Entering Buhl, population, 4,670. We had an Indian raid right in town. The lead wagon and mine ran away about five blocks. 12:40: Arrived at the Buhl labor camp. It's a real pretty place, right across the street there is a swimming pool which is free to all of us.

July 12 (Sunday), LeRoy White an old schoolmate of mine came out and looked me up. Took us out to his place for dinner. He also took us out to the Snake River Trout Co. It is the largest independent hatchery

in the world. Trout sells for 90 cents a pound. We went to visit the Niagara Crystal Falls which were beautiful. We've had a large crowd here today. I've given away about 1,500 letters and answered 40,000 questions.

Appreciation for Our Spanish Allies

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. PHILBIN. Mr. Speaker, it is appropriate indeed that Congress should recognize the 23d anniversary of the original effort of General Franco to eradicate Communist infiltration in Spain and check the Communist conspiracy in that historic country.

In our own country, we are irrevocably committed to the principles of free constitutional government, because we feel that under this form of government man has achieved a great measure of freedom, as well as a larger measure of prosperity, than under any other system. It could be said, therefore, that as Americans we unalterably favor free, representative, democratic institutions.

Notwithstanding that fact, most of us must be deeply impressed with the determined fight that General Franco and his government have made against the organized, world Communist conspiracy that was so intent upon fastening its ruthless talons on the Spanish people. Theirs was not an easy task. It was fraught with bloodshed, sacrifice, and internecine strife characterized by brutal and bloodthirsty outrages against human decency and by persistent schemes and plans to impose the Communist system upon the entire Spanish people.

This campaign employed every means of strategem and trickery, deceit, misrepresentation, and violence to destroy the forces of religion, order, and stability in the Spanish Government and nation. If it had succeeded, Spain and its noble people with their great heritage of faith and devotion to the spiritual values of Western civilization would have been forcibly taken into the fold of the Communist world movement and would have been unceremoniously dragged behind the Iron Curtain, so to speak.

This result would have been tragic, not only for Spain, but for the world. We can, therefore, express our gratitude to those who successfully beat off the attempts of Communists to infiltrate and capture Spain.

We have other reasons for gratitude in that since that time the Spanish Government, although it is not modeled on the lines of democracy that we ourselves embrace, has loyally stood by our side in the great world conflict against communism which will determine the destiny of free men and decide whether or not mankind will henceforth live under institutions of liberty or in a state of debased serfdom.

Spain is strategically located on the European Continent. It has wholeheartedly collaborated with us in establishing necessary defenses against Communist encroachment and aggression. Our Nation has, in turn, done much to bolster the military and economic strength of Spain and thus we not only have a willing ally, but an ally that is possessed of growing power and strength to withstand Communist infiltration and attack, and to join with the other free nations in checking the gigantic scheme to make all peoples of the world captive to Marxist domination.

I join with other Members of the House in congratulating General Franco and the Spanish Government upon its successful fight against communism and upon its undeviating loyalty and allegiance to the cause of the free world which our own great Nation represents.

I desire to express my compliments and appreciation also to my esteemed, able, and distinguished friend, the gentleman from New Mexico [Mr. MONTOYA] for arranging on July 16, the special occasion upon which the Members of the House might express their views on this subject matter.

Franklin D. Roosevelt Memorial

SPEECH
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 23, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the resolution (H.J. Res. 115) to reserve a site in the District of Columbia for the erection of a memorial to Franklin Delano Roosevelt, to provide for a competition for the design of such memorial, and to provide additional funds for holding the competition.

Mr. LANE. Mr. Chairman, we do not have to wait for the verdict of history. One hundreds years from now, when scholars sift all the objective evidence of the stirring events that occurred during the emergency years from 1932 to 1945, they will merely confirm what we now know to be true; that Franklin Delano Roosevelt was a national and a world leader of enduring fame.

Being human, he made mistakes, even as you and I, but they were the passing errors made by a pioneering leader who was not afraid to dare and do as he faced up to the unknown and inspired the American people to rise from the bleak pessimism of economic catastrophe, to victory in affirmation of their freedom. No other President faced this double threat, one following closely upon the other.

Our Nation emerged from these inner and outer challenges to its very existence, stronger in substance and purer in spirit, thanks to the indomitable courage and resourcefulness of one man: Franklin D. Roosevelt.

The reckless greed of the twenties had plunged the Nation into a paralyzing depression that spread fear throughout the land, as the confident young Governor of New York began his campaign for the Presidency. His smile, his encouraging tone of voice, his proposals for dynamic action, radiated his complete faith in the ability of a free people to lift themselves from the morass of economic stalemate and to develop new instrumentalities for progress.

Here was a leader in the best American tradition, directing us toward the new horizons waiting for discovery, and saying: "Come. Let us go forward. There is nothing we cannot accomplish if we blend our individual creativeness with group cooperation."

It seemed as if the spirit of history itself had ordained these testing periods for this democracy-in-a-republic, to determine if we were merely coasting on the accomplishments of the past, or if we could live up to the values and the responsibilities of freedom in order to cope with the new challenges of our times.

Franklin Roosevelt understood the real danger, and the people responded to his call for trail-breaking action. The fault was within ourselves. Could we learn to make freedom work in all fields, and for other peoples as well as for ourselves?

With the rare foresight, and courage, and the willingness to try new ways and means, that characterizes genuine leadership, F.D.R. brought us through the struggling years from massive unemployment and the depths of economic despair to the summit of economic and military victory. Without him, where might our Nation be today? Locked in the sterile status quo of entrenched privilege that forever exploits the people, or a captive nation that declined because it had neither the spirit nor the intelligence to work and fight for the expansion of freedom?

We remember the minority that opposed the economic and social reforms of President Roosevelt and those who cravenly rationalized that we can do business with Hitler.

But Roosevelt knew that freedom is life itself. It cannot breathe and grow if it is gripped by the dead hand of yesterday, held tight by the rigor mortis of defunct procedures and policies.

Without vision, a nation perisheth. Roosevelt had that vision in abundance, and the practical genius of experimenting so that we could make freedom realize in fact, more and more of its great and inexhaustible potentialities.

Fourteen years after his death in the service of our country, and in the service of freedom for humanity, we are honored by this opportunity to build a beautiful memorial that will perpetuate his gallant spirit, his achievements, and his confidence in mankind.

Thanks to Franklin Delano Roosevelt, we face the future unafraid.

Appendix

Distress Resulting from Stoppage of Steel Production Operations

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, July 30, 1959

Mr. JOHNSON of Texas. Mr. President, we tend to forget, when we read the graphic headlines, that there is individual distress in the big, nationwide strikes. This is beginning to show up already in the stoppage in steel operations. It is not widespread, but there are people who are looking forward to an immediate future of uncertainty.

Helen Dudar, of the New York Post, illustrated this graphically in a story, printed on Tuesday, of what one individual family involved in the steel strike is doing to tighten its belt.

I ask unanimous consent that this very fine story be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Post, July 28, 1959]

STEEL STRIKE IS BEGINNING TO PINCH THEIR SAVINGS

(By Helen Dudar)

LEVITTOWN, PA., July 27.—The second week of the steel strike has been a week of decision for Frank and Harriet Dzurinko.

They decided not to make their mortgage payment for the month of August and they made in Frank's casual report, "our first drag on the savings."

They are a proud couple, accustomed to stinting to house six growing children and loathe to sound either self-pitying or immersed in the pleasures of economic martyrdom. They would like to have more money, but they get along on what they have without grievous complaint.

DON'T WANT RELIEF

"We could have made a payment," said Mrs. Dzurinko, "but why should we use up our food money? We might have to go on relief and I wouldn't want to do that."

The first dent on the savings was a $50 withdrawal. "I could have used that," she added lightly, "to buy a dresser for the girls' room upstairs."

When the Dzurinkos were interviewed by the Post last week, they reported that thanks to the near-record outpouring of steel during the first half of the year they had been able to save several hundred dollars.

The forced savings program was adopted, they said, in anticipation of a long period of strike idleness.

The Dzurinkos would be more solvent now if the Fairless Hills mills—unlike most of the other steel plants involved in the nationwide strike—had not found that it was unable to pay the 2-weeks' wages earned for the men before the start of the strike, for lack of personnel.

CAN'T MAKE OUT PAYROLL

"The white collar workers are on strike, too," Dzurinko explained, adding angrily, "The company's got 250 supervisory people living in that plant—eating and sleeping there—and they claim that 250 educated, responsible management people can't make out a payroll."

At work, Dzurinko handles stock inventory in a unit that operates between two processes of steelmaking; he hasn't had a chance to miss it.

As captain of what his 7-year-old calls the "pickle line." (Dzurinko used to work in a steel-pickling process, and Francine sees a mysterious connection) he has been too busy these past 2 weeks tending to gate-policing assignments to relax.

"He hasn't even gotten to do things he was planning to do around the house during the strike," Harriet said.

MANY KIDS VACATION

The older children have felt the impact of the strike chiefly on their playtime activities. Many of their friends, children of steelworkers in this lower Bucks County industrial area, have gone with their families to "vacation" without expense at homes of relatives for the period of the strike.

The Dzurinkos have no such cushion to fall back on. Dzurinko's father is a retired steelworker and his three brothers are all steelworkers, idled by the strike back in his hometown of Monessen, Pa.

The major immediate financial problem will be the $14-a-month utility bill (unlike the local tradesmen, the utility company doesn't extend credit) and school clothes for the four older children.

"Marlene's got $13 saved up from baby sitting," Mrs. Dzurinko said, "so she should be able to get something for school, but she's afraid it'll look funny buying clothes while the strike is on."

"Well, won't it, Mommy?" demanded 11-year-old Marlene, oldest of the six.

"Spend it before I have to," her mother advised.

Dzurinko interrupted, jokingly, "Well, I don't know. We may have to pool our money."

"I gave Frank $3 to buy us food for dinner the other night and told him he couldn't spend any more and he came back with steak," his wife reported proudly.

" 'Steelworkers' prices,' " Dzurinko explained. "I got steak at the local market for 95 cents a pound."

It is a family of controlled appetites. Two pounds of steak fed all of them; the remaining $1.10 bought the rest of the meal.

"We get awfully tired of hamburger," said Harriet, "and of eggs and potatoes for dinner."

But there's a bright side to everything.

"I'll tell you one thing about this strike," she added. "The children never would eat potatoes before, but they're learning."

Veterans Should Back Teague Bill

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. WHITENER. Mr. Speaker, the Shelby Daily Star, Shelby, N.C., carried an editorial on July 29, 1959, concerning the veterans' non-service-connected pension bill recently passed by the House of Representatives.

The editor of the Star has made a very able analysis of the provisions of the bill and, under leave to extend my remarks, I include it in the Appendix of the RECORD:

[From the Shelby (N.C.) Daily Star, July 29, 1959]

VETERANS SHOULD BACK TEAGUE BILL

One veterans' organization (World War I Veterans) has been seeking an across-the-board pension of $100 a month for men and women who served at least 90 days in the First World War.

This pension would be received by all, regardless of need.

The organization has bombarded Members of Congress with mail in support of the monthly pension plan, with no income limitations for its recipients.

The House Committee on Veterans' Affairs has wisely and courageously kept this proposed bill from getting on the floor for a vote. If it advanced that far, chances are—politics dictating the course—that it would be approved.

A much wiser, fairer, and more sensible bill is H.R. 7650, the Teague bill, which establishes a level of need for all pensioned veterans and their dependents. It would pay pensions on a graduated scale, increasing them as outside income declines.

Under present law disabled veterans are subject to an "all or nothing" pension plan. They receive the full pension if their income from outside sources does not exceed $1,400 a year. But if they have only 1 cent of income over $1,400 they receive nothing.

Under the Teague bill, all income limits will be raised. The veteran with the greatest need will get the greatest help. Veterans with dependents will get the greater help. Veterans with dependents will get increased pensions. The bill will bring onto the rolls additional pensioners now barred by lower income limits.

This is a bill that veterans of all wars should welcome and urge their Senators to support. No one now on the rolls would go off, and a majority would get more money. Pensioners could choose the old or new scale, whichever was higher.

Where present pension law has only two rates, $66.15 or $78.75 per month, and two income limits, $1,400 for single persons and $2,700 for those with dependents, the Teague bill will have three pay intervals giving:

1. More money where the need is greatest.
2. Less for new pensioners where the need is least.
3. Pensions to many now barred because their income exceeds $1,400 or $2,700.

Few veterans and their families seem to realize that the Teague bill will increase pensions for 80 percent of all single veterans on the rolls, for 62 percent of all married veterans and for 70 percent of all widows and orphans now drawing pensions.

Seventy percent of all pensioners will get more money and the remaining 30 percent will be protected from a decrease by the "grandfather clause," allowing them to elect the old or new scale.

No pensioner would receive less than he is now receiving.

In considering the Teague bill, veterans should be careful to make a distinction between compensation and pension.

Compensation is given for disability incurred or aggravated during wartime service. Pension is given for disability which occurs after the veteran's discharge from service. And it is intended for those veterans and families who are in real need.

The request that World War I veterans get a flat $100 a month, regardless of need, is indefensible. Why should a veteran who is well off financially and who does not have a service-connected disability receive a monthly grant from the Government?

If we start that kind of pensioning, there will be no stopping place.

OLIN E. TEAGUE, of Texas, chairman of the House Committee on Veterans' Affairs and author of H.R. 7650, is a man who has the veteran at heart. He is one of the most-decorated combat infantry officers in our country today and was wounded several times in service. Veterans' affairs are in good hands with Congressman TEAGUE.

We consider H.R. 7650 a real break for veterans of all wars and their families who deserve pensions because of need. It is far more acceptable than the flat pension proposal for the veterans of one war.

The House has passed this bill and it is now in the hands of the Senate Finance Committee. It deserves the support of veterans and their families, not their condemnation.

Award to and Dedication of Atlantic Research Corp. Laboratory

EXTENSION OF REMARKS
OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 30, 1959

Mr. BYRD of Virginia. Mr. President, on July 18, 1959, Rear Adm. Paul D. Stroop, Chief, Bureau of Ordnance, Department of the Navy, awarded to the Atlantic Research Corp. of Alexandria, Va., a certificate of commendation for the outstanding service this northern Virginia corporation has performed.

I ask unanimous consent to have printed in the Appendix of the RECORD this certificate of commendation and the address made by Dr. Arch C. Scurlock, president, at the opening of the laboratory of this corporation.

There being no objection, the certificate of commendation and address were ordered to be printed in the RECORD, as follows:

DEPARTMENT OF THE NAVY,
BUREAU OF ORDNANCE,
July 18, 1959.

Certificate of commendation awarded to Atlantic Research Corp. for outstanding service to the Bureau of Ordnance, Department of the Navy, in advancing significantly the state of the art of solid propellant rocketry. In the course of 10 years of solid propellant and rocket research and development under sponsorship of the Bureau of Ordnance, Atlantic Research Corp. has made a series of marked contributions including the development and application of Arcite plastisol propellants; the development of high-performance, end-burning rocket motors; the effective utilization of aluminum as a high-performance propellant ingredient; the development of plastisol double-base propellants; and the establishment of a technique for rigorous theoretical calculation of propellant performance. These achievements are regarded as significant contributions to the accomplishment of the overall mission of the Bureau of Ordnance. It is in recognition of this outstanding service that this award is presented.

PAUL D. STROOP,
Rear Admiral, U.S. Navy, Chief, Bureau of Ordnance.

ADDRESS DELIVERED BY DR. ARCH C. SCURLOCK, PRESIDENT, ATLANTIC RESEARCH CORP., AT DEDICATION CEREMONY, JULY 18, 1959

Fellow employees and friends of Atlantic Research. This is to me certainly a great and heart-warming day. And I am sure it is also to many, many others of you with whom I have worked shoulder to shoulder to build this fine organization and to conduct successfully our many technical programs during the last 10½ years.

From very meager beginnings and an initial staff of exactly two souls, Atlantic Research has grown in 10 years to become, I believe, the largest independent research and development organization in the area of Metropolitan Washington. Our staff presently totals over 600, and our annual payroll now exceeds $2½ million. Rapid growth has always been the rule with us, rather than the exception, and our organization is presently operating at an annual expenditure rate of approximately $8 million—a seventy percent increase over last year at this same time. Of this $8 million, production accounts for about 25 percent and research and development for the remainder.

Our company is presently conducting substantial research and development efforts for every branch of the military service. Work is also progressing for the National Aeronautics and Space Administration, the Atomic Energy Commission, and a number of other sponsors.

Sixteen different rockets are now either in production or under development by Atlantic Research, and our rockets are finding wide use in a variety of military and space applications. The most recent Atlantic Research rocket to move from development to production is the Arcas, a technologically advanced high-altitude sounding rocket developed under Office of Naval Research sponsorship to carry a 12-pound payload to 200,000 feet. On June 23 at White Sands, the Arcas, carrying a 12-pound payload achieved an altitude of 245,000 feet. Production of Arcas by yearend is scheduled to reach 100 per month.

Atlantic Research is accustomed to growth, but so also is this area here in which we live. And this great metropolitan area of Washington is as certain to continue its rapid growth as any place on the globe. With this growth, an even greater expansion of scientific, educational, and cultural activities will surely take place. World capitals throughout history have always grown to be great centers of learning and culture—Athens, Rome, Paris, London. Thus also has grown the once-raw Capital City of Washington with its original swamps and pastures. And it will grow still larger in the future.

For many reasons, perhaps foremost being that Washington is the seat of our Federal Government and headquarters for the many Federal agencies concerned with direction of Government-sponsored research and development efforts, the Washington area is very well suited as a location for R. & D. organizations like Atlantic Research. I predict that many such new organizations will spring up here during the next 10 years; and that most of those now here, including Atlantic Research, will continue to enjoy rapid growth and prosperity.

If this area possesses any single major weakness as a research and development center, it could probably be said to be its inadequate facilities for technical training at the graduate level. Importing scientists and engineers from afar, of course, presents more problems for an organization like Atlantic Research than would getting production of such people right out of the plant backdoor. An M.I.T., a California Tech, or a Harvard in this area would certainly be a giant step forward.

Regarding the cold war and its implications to Atlantic Research; although it looks like an end to this Nation's competitive struggle with Russia is nowhere in sight, it does appear likely (at least to this party) with both countries coming nearer to possessing the capability for almost total push-button annihilation of the other, that the competition is likely to shift, to some extent, to more peaceful pursuits. The conquest of space offers profitable competitive opportunities which are now beginning to be exploited by both countries. This is an area where Atlantic Research has much to contribute. There are almost unlimited additional scientific and technological areas which, while perhaps not quite so glamorous to the general public as space-oriented programs, also offer challenging opportunities for technological advance and for competition on an international scale. Such other areas include the medical and biological sciences, particle physics, computer technology, exploration of the earth's core, and direct conversion of nuclear to electrical energy to mention only a few.

We are presently in an era of breathtaking technological advance, the end of which is not now in sight, but which is likely to lead within a few years to almost unbelievable achievements in every branch of science. Atlantic Research stands ready to participate and to be a leader in the continuation of this great technological revolution. Now on behalf of Atlantic Research I wish to thank the Bureau of Ordnance and Admiral Stroop for the fine recognition they have accorded us on this day. It is with great pride that I accept from the Bureau of Ordnance this citation for a job well done. I myself look upon the technical achievements cited not only as giving credit to our capable staff, but bringing equal recognition to the dedicated and competent civilian and military personnel of the Bureau of Ordnance with whom we have worked for so many years, and without whose constant assistance, cooperation, and encouragement these happy achievements would probably never have seen the light of day. In technical competence certainly the Bureau of Ordnance is second to none. I wish also now on the occasion of the dedication of this handsome new building to salute the fine members of the Atlantic Research staff to whom most of the credit must really go for our present successes. It is the product of your brain and your muscle that has done it. I hope that all of you good people of Atlantic Research, just as I do, take great pride in the contribution we have made working together to build this young organization into the substantial enterprise and national asset that it is today.

We must recognize as members of this organization, on the other hand, the increased responsibility we now have to mankind and to our great Nation as a not insignificant contributor to world technological advance and national military strength. We must bend every effort to remain as efficient and as productive in the future as we have been in the past. We must continue to maintain our high standards of technical competence and our shirt-sleeve approach to problems. We must continue to welcome hard work.

It is appropriate also at this time to give thanks to our many good sponsors and customers for their continued support over the years. It is hoped that this new building will further help us to become more efficient and continue to give a dollar and a half of results for a dollar.

Eisenhower's Cabinet a Magnet to Michigan

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the July 23, 1959, issue of the Saginaw News regarding the nomination of Frederick H. Mueller to be Secretary of Commerce. I know the nomination of this outstanding Michigan man will be supported by all those people devoted to the cause of good government:

EISENHOWER'S CABINET A MAGNET TO MICHIGAN

Michigan Republicans are faring much better via the appointive route than at the popular polls, and the plums they harvest rate among the Nation's choicest. Latest proof is the nomination by President Eisenhower of Frederick H. Mueller of Grand Rapids to be Secretary of Commerce.

The furniture executive, who has been Acting Secretary in the Commerce Department since 1955, is the fourth Michigan man to be named by Mr. Eisenhower to a Cabinet post. Postmaster General Arthur E. Summerfield still is in the Cabinet, Charles E. Wilson was Mr. Eisenhower's first Secretary of Defense, and George M. Humphrey was his first Secretary of the Treasury. Other top spots held by Michigan men in the Eisenhower team have gone to Army Secretary Wilber M. Brucker, and to Frank G. Millard, Army legal counsel.

There have been numerous other men from Michigan serving this administration, some with political backgrounds, but most simply identified as active Republican laymen. Mr. Mueller served for 13 years on the State board of agriculture, governing body of Michigan State University. While he lost this elective post in the 1957 Democratic sweep, it had been for him more an assignment in public service which had no connection with his 1955 arrival at the Commerce Department. In fact, only Mr. Summerfield reached his Cabinet rank by way of active politics.

The Grand Rapids industrialist counts himself a conservative in philosophy. He is willing to go further in defining that philosophy as "a viewpoint you reach by experience rather than by theory." Secretaries Wilson and Humphrey embraced similar philosophies, and for similar reasons—they learned their businesses in commerce before entering the service of their Government.

Since Mr. Mueller has held full responsibilities of the Department as Under Secretary since last fall, he appears well fitted to slip into the top roll without hitch in the complex operation of this 4,500-staff Department. His nomination last October was approved quickly and without debate, and Senator MAGNUSON, Democratic Chairman of the Commerce Committee, already has indicated that Mr. Mueller undoubtedly will be confirmed as quickly for the full Secretary's position. The Senate, especially Democratic Senators, removed from the scene the controversial Lewis L. Strauss and are more than content with that victory over the administration.

Unlike Mr. Strauss, Mueller has been a popular official who knows how to get along with Congressmen, inspires effort and goodwill within his staff and wastes no time with red tape or reaching decisions. He finds the challenges of Government stimulating and says he actually thrives on them. This is in sharp contrast also to the reactions and experiences of many good men who have left private business life in response to a call for their talents from Government. Some in the Eisenhower administration felt so frustrated at red tape and so unable to sublimate executive authority to the necessities of legislative consultation and compromise that their experiences in Washington were nothing less than miserable. Some left quickly and unheralded.

Mr. Mueller was both a business and civic leader back in Grand Rapids, where he enjoyed wide associations and led joint undertakings in both. For him, busines life is stimulating but Government is even more so.

If temperament and attitude are important adjuncts of experience, we judge that Frederick Mueller is going to bring greater administrative success to the Commerce Department in his role of middleman between U.S. business and the Government than has been seen during those first 6½ years of the Eisenhower administration.

Removal of the tensions and unpleasantnesses that have prevailed during one of the most historic contentions between Congress and the White House should do much for Department morale. Mr. Mueller strikes us as the kind of man who can harmonize differences if anyone can. As Michiganians, we all can take pride in his nomination.

Operation of Radio and Television Stations in the United States and Russia

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, July 30, 1959

Mr. BUSH. Mr. President, I ask unanimous consent that an editorial which appeared on July 29, 1959, in the Wall Street Journal, entitled, "The Guide That Can't," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, July 29, 1959]

THE GUIDE THAT CAN'T

"We reject the notion that that government governs best which governs least."

A forthright statement, at any rate. The repudiators of Jefferson are seven prominent economists, including J. K. Galbraith and Gerhard Colm, who came out with a report the other day on what should be done to fix up this rickety old country.

For, as the group sees it, the United States today "is a rudderless ship drifting on what is at the moment a rising tide of economic activity. Without a firm policy we will descend again into the trough of economic stagnation and retrogression. * * * The Federal Government is our only instrument for guiding the economic destiny of the country."

The panel offers specifics as well. Among others, proposed price and wage increases would be subject to compulsory Federal "fact finding"; the Government could say no and make it stick. "Expansion of investment in the public sector," that is, lots more Federal spending. Studies designed to get away from "tight" money and high interest rate policies. And other Government action to try to make the economy grow 4 to 5 percent every year.

This is a program for Government guidance all right—and with a vengeance. So it is perhaps pertinent to ask just how good a guide any government is.

In this country we have by now had considerable experience with it. We had the benefit of Washington's guidance (and spending) throughout the thirties, only it didn't quite guide us out of the depression. We have had guidance in the form of vast public investment and cheap money, and the result of that was inflation. To counteract inflation we have these repeated proposals, like the present one, for some form of price-wage control even though experience suggests it is impossible to control inflation merely by trying to control some of its symptoms.

A spectacular current example of Government guidance is the farm program. No segment of the economy has been more wrapped up with Washington, and nowhere has the defiance of all reason been more bizarre.

Other countries' experience is also instructive. Britain in the postwar Socialist era suffocated under official rules, regulations and bureaucracy; recovery began when the socialists left power. West Germany's miraculous recovery started when the people were permitted to junk their inflated currency and wartime and occupation economic controls. Russia's economy, one of the most "guided" (regimented), is also the most unbalanced among industrial nations.

Surely not all of this can be coincidental. Why does government, time after time and place after place, prove such a poor guide?

When people work without this guidance they certainly can make mistakes, but the mistakes affect themselves and relatively few others. Set up a ministry of the economy, however, with a bureau of steel, a department of automobiles, a national refrigerator agency and so on and on, and the mistakes will be colossal, for they will affect all those in an industry and all those in any way related.

Moreover, the mistakes will be inevitable. Government officials cannot run an economy well. It's not so much that they often lack experience as that they must interfere with and disrupt the marketplace; to do so is their excuse for existence. They substitute their judgment for the collective judgment of millions of individuals, and it just is no substitute.

Many of the bureaucrats' judgments will not even be economic at all but political because they are political creatures subject to political pressures. For that and other reasons, a government-guided economy is bound to be an inflationary economy. Inflation's appeal to politicians is notorious, and quite understandable since they can almost never raise enough taxes to do all the "public" investment and whatnot they want.

Economists who clamor for government guidance are echoing Lord Keynes' misplaced faith in officialdom; they naively assume that bureaucrats, once an economy is delivered into their hands, immediately become saints and repositories of total wisdom.

And this is also something worse than naivete. It is not only saying they know better than Jefferson, although that is saying a good deal. It is saying they know so much they can reject the guidance of history itself.

Nixon-Khrushchev Debate—Getting Down to Brass Tacks

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

NIXON-KHRUSHCHEV DEBATE—GETTING DOWN TO BRASS TACKS

There was good reason for Nikita S. Khrushchev's jaw to drop open in astonishment when he engaged Vice President NIXON in verbal debate. In Mr. NIXON, for the first time, Mr. Khrushchev was faced with a man who not only got down to brass tacks—but seemed perfectly willing and able to get down to brass knuckles if necessary.

Other free world visitors to Moscow have failed to make a dent in the crusty shell of the Red dictator. Their subtleties, their diplomatic finesse and their attempts to avoid rocking the boat played Khrushchev's hands.

Mr. Khrushchev delights in blackjacking his visitors with insults—all the while smiling. As a consequence they have—barring Mr. NIXON—been off balance, intimidated at the start. Mr. NIXON realized from the first that he was up against a tough, bullylike world figure who mistakes finesse for softness, niceties for cravenness. So Mr. NIXON smiled and poked his finger in the Khrushchev chest to stress a point. He hammered at him with facts, and the facts found their marks.

Blow by blow was demanded in the Khrushchev-Nixon meeting. And that is what has happened. The two protagonists have not been swayed from their beliefs. But they understand each other. And it is highly probable that at last Mr. Khrushchev is realizing that Mr. NIXON is the amplifier of American unity and resolution. Certainly the Russian dictator must know now that Mr. NIXON represents American public opinion and American determination to hold fast, regardless of political belief. The American people and their Government are not separate entities.

Mr. NIXON is very much on balance in his fencing with Mr. Khrushchev. He has a strong case, and he has stated it well. He has put the record straight for the Russians. Nothing he has said has supplied the Kremlin with propaganda weapons. The same cannot be said for other naive Kremlin visitors.

The story of Vice Adm. Hyman Rickover and the Russian atomic ice-breaker demonstrates Mr. NIXON's firmness. The admiral, an outstanding authority on atomic submarines, at first was denied access to the Russian vessel. Mr. NIXON told him to stand fast, reminding his Russian hosts that Frol Kozlov had been permitted to inspect freely in the United States. The admiral stood fast, just as we are standing fast at Geneva, Berlin, Quemoy, and every other site of Red intimidation.

Mr. NIXON caused the Red leadership to reassess its distorted and warped picture of America.

The Vice President has told Khrushchev the things our people have yearned to tell him for years.

Fleet of Mercy Ships To Help World's Sick

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, July 30, 1959

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement prepared by the junior Senator from New Jersey [Mr. WILLIAMS], with two editorials referred to in his statement.

There being no objection, the statement and editorials were ordered to be printed in the RECORD, as follows:

FLEET OF MERCY SHIPS TO HELP WORLD'S SICK

Earlier this year I was happy to have an opportunity to add my name to a bill known as the Food for Peace Act, introduced by the distinguished senior Senator from Minnesota, Senator HUMPHREY. Its objective is to help build essential world conditions of peace through use of our agricultural commodities for the relief of human hunger. This presented, to my mind, a really effective means of promoting our foreign policy objectives. And now to broaden this whole concept has come a most imaginative proposal as a sort of followup to the food for peace idea. I refer to the proposal of Comdr. Frank Manson, of the U.S. Navy, to send mercy ships—grain ships, hospital ships, education ships—as a great white fleet designed to make the benefits of the free-enterprise system available to the entire human race.

Obviously, we have no illusions that such a fleet will bring peace to the world in one sweeping movement but again, it is another step in our progress toward peace—a bit at a time. As Commander Manson says: "American leadership can prevent the people of the world from losing hope."

I submit that this proposal will have great dramatic impact and will, I believe, capture the imagination of every American. As evidence of how this thought has already caught hold, Senator HUMPHREY has introduced legislation in this body to provide two such white fleets.

We are presented here with an unique and challenging opportunity which will hold much good for America and for the entire world. I attach hereto editorials from the July 25 Daily Home News, of New Brunswick, and the July 29 issue of the Asbury Park Press.

[From the New Brunswick (N.J.) Daily Home News, July 25, 1959]

FLEET OF MERCY SHIPS TO HELP WORLD'S SICK

With so much talk of war and destruction, it is refreshing to read of the historymaking food-for-peace program before Congress and described in today's Allen-Scott report, and the plan of youthful Comdr. Frank Manson of the U.S. Navy to send mercy ships around the world as revealed in this week's Life magazine.

We will let Robert Allen and Paul Scott describe for you how U.S. food surpluses could be used in undeveloped countries and explain Manson's idea which grew out of the things he witnessed, as did thousands of other American servicemen, at the close of World War II.

"I saw diseased, destitute, and poverty-stricken people living on the rimland of Asia, Europe, and Africa * * * some actually dying on the streets of starvation and disease," he said. For 10 years these sights were relived in Manson's mind until on a December afternoon in 1957 the plan evolved as he was thumbing through a photographic file in his Pentagon office. This includes pictures of auxiliary and hospital ships.

Why not, he mused, have an entire fleet of mercy ships—grain ships, hospital ships, education ships, power ships—a fleet designed to make the benefits of the free enterprise system available to the entire human race. It was one of those large and simple ideas which, once formulated, surprises you that it wasn't thought of sooner.

Manson, who is now on duty with U.S. Navy headquarters in London, has no illusions that a fleet of mercy ships will bring peace to the world in one sweeping movement. But he is convinced his plan will bring people closer to people and therein lies a road to peace.

[From the Asbury Park (N.J.) Press, July 29, 1959]

A NEW WHITE FLEET

Fifty-two years have have passed since that day in 1907 when President Theodore Roosevelt sent 16 U.S. battleships on a tour around the world. Many shore residents will recall the day of the ships' return when, gleaming white and flag-bedecked, they steamed past Asbury Park and headed for New York harbor. The impressive armada became known throughout the world as the Great White Fleet.

Five decades later a naval officer, Comdr. Frank Manson, seeks to re-create this fleet and use it, in a different way, to impress the world. This time we would not seek to awe the world with our display of might but rather demonstrate our love of peace and our spirit of good will toward other nations. We would take this fleet from mothballs and commission it as an angel of mercy. Instead of armament it would carry food and medicine and it would visit any port of call which asked for its services. It would show the world that our New White Fleet is just as powerful as its prototype of 1907 and that good will can win as many battles as force.

There can be no doubt of the preeminence of the United States in the fields of manufacturing, engineering, science, medicine, agriculture and a dozen others. But in the realm of propaganda we have lagged. We have talked at length of our good will toward less fortunate nations and we have backed our words with millions of dollars. Yet, somehow, we have failed to win the friendship that should be ours and, in the propaganda war, Russia, which has never given away anything without first attaching a good strong string, seems to have excelled us. Truly, our failure has been compounded not of a lack of generosity or friendliness, but, rather, of shortcomings in our methods of bestowing our assistance.

The new White Fleet, in our opinion, would do more to spread the peaceful intentions of the United States than any other single thing we can do. It would be a dramatic demonstration that the United States accepts its responsibility to its neighbors and assumes an obligation to aid those less fortunate than ourselves. It would be an unforgettable example of the U.S. creed that those in trouble are to be succored, not exploited and enslaved.

Commander Manson's dream has received congressional support. A bipartisan group composed of Senators AIKEN, of Vermont, and HUMPHREY, of Minnesota, and Representatives BATES, of Massachusetts, and EDMONDSON, of Oklahoma, is sponsoring a resolution urging President Eisenhower to put

the new White Fleet in operation. Few projects are capable of firing one's imagination as this one. It is an undertaking combining humanitarianism with practicality and offering a generous dividend in good will. Few proposals are more deserving of support. We commend it to our readers and urge them to write Senators CASE and WILLIAMS and Congressman AUCHINCLOSS soliciting their endorsement.

Responsibility of the Flight Engineer for Passenger Safety in Commercial Aviation

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. AVERY. Mr. Speaker, the Flight Engineers' International Association are making every effort to increase the passenger safety in commercial flying. Considerable responsibility rests with the flight engineer as he is responsible for the ground repair that must be done to an aircraft at each landing while on a flight plan or schedule. Not only must the flight engineer, under FFA regulations, identify the various mechanical repairs that must be made on the ground other than the routine ones, but it is basically his responsibility ascertain whether these repairs have been made before the aircraft is again taken into flight.

As an example of the effort of the Flight Engineers' International Association effort to improve the skill of the members of their profession, I want to include an address made by the association president, George R. Petty, Jr., at a seminar on jet safety held in Washington on July 29, 1959. The recent mechanical difficulties developing as a result of the increased number of jet-propelled craft on commercial airlines has emphasized the responsibility of the flight engineer and his effort to better discharge that responsibility:

We have had many glowing reports in the press and trade publications about the wonderful public acceptance of the jet airplane in commercial use.

We read where each jet flight has a waiting list; where the load factors have boomed to 90 or more percent—this even in the so-called off seasons.

And yet, we cannot help wondering what would have happened had the public understood that the jet era, as the airlines like to call it, was one man away from being a complete fiasco—financially and safetywise.

What would have happened had there been innumerable delays and cancellations, what would have happened had there been innumerable scare stories similar to the Chinese fire drill which took place at Idlewild a few weeks back?

The memory of the Comet failures has not faded completely from the public mind and a few incidents with our own jets could very easily have brought it back.

This is why we say the jet era stood one man away from fiasco. This man we maintain is the flight engineer. Ever since the jet has been introduced this man has had to compensate through his skill and background for poor or inadequate maintenance, design faults in some components and systems of the airplane and, on some airlines, an utterly miserable training program. Let me list a few examples:

Before Pan American took delivery on its first 707 a test flight was flown from Boeing Field in Seattle to Mexico City with a Pan American flight engineer aboard, as well as several Boeing flight engineers. The purpose of this flight was to discover how to keep an accurate record of fuel consumed in long-range operation. It was found by the Pan American flight engineer that the fuel gages at his station were completely unreliable for such a purpose and that only by minute-to-minute calculation of fuel consumed could the flight engineer insure a reliable figure for fuel remaining when the plane reached its destination. In making these calculations, he had to utilize the miniaturized fuel flowmeters on the pilot's instrument panel, making accurate reading difficult, if not impossible, from the engineer's station. Flight engineers have been performing this function for close to 30 years in airline operation and as a result of this flight they found it even more necessary and critical on jets.

Shortly after taking delivery of the 707, Pan American experienced several failures of the engine accessory drive gear box. In one instance, the aircraft landed in the Azores with a full load of passengers and maintenance was not prepared to cope with the situation—and the Azores are not an out-of-the-way or off-line station. The flight engineers aboard, one of whom is here tonight, took the gear box apart, cut out the failed gears with a hacksaw, reassembled the parts to prevent oil leakage and certified the aircraft as airworthy under their aircraft and powerplant licenses and the airplane was flown back to New York with a minimum of delay.

Later, in 1958, a flight engineer during a preflight inspection in Paris, discovered damaged compressor blades in an engine of an aircraft that had been on the ground for 8 hours and had undergone maintenance inspection required at a Paris turnaround. The engine was found unserviceable and was removed as a result of his discovery. Takeoff or flight with this engine damage undetected, could have led to the disintegration of the engine in flight.

On another occasion during a takeoff from Paris, in icing conditions, two engines of the jet flamed out when the engine anti-icing system was operated. The aircraft was heavily loaded and the captain decided to dump fuel to reduce weight. The flight engineer suggested it would be safer to try for an aerial relight of the engines. By assisting in the proper relight precedures the flight engineer made both engines operative and the flight continued to New York—and the Eiffel Tower remained intact. Investigation of this incident led to the detection of a fault in the design of the water injection system. It has since been corrected.

On many occasions the flight engineer has been called upon to repair or compensate for the failure of the autopilot while the aircraft was in flight. The operation of the autopilot is a vital factor in the efficient handling of the huge jets.

You have seen the slides which show the complex nature of this system.

You are probably all familiar with the unfortunate 30,000-foot nosedive of the 707 over the North Atlantic several months ago, and the penalties imposed upon the pilots in that incident. But no mention has ever been made of the part played by the flight engineer aboard the plane. It was the fight engineer who first called attention to the impending trouble. During the dive, the flight engineer electrically deactivated the malfunctioning autopilot and operated the manual stabilizer controls to assist the captain in regaining the control of the airplane.

FAA investigators on returning from the initial interrogation of the crew were high in their praise of the actions of the flight engineer and felt that he had performed a critical part in saving the aircraft from destruction.

On many occasions the pressurization and air conditioning system of the jets has been repaired after having failed in flight. Failure to have done so would have made a turn around mandatory.

It is interesting to note at this point that all of the jets now in commercial use are carrying flight engineers who possess an aircraft and powerplant license. This means simply that these men have the background and training necessary to make these repairs and corrections. If they did not, the jet age would have gotten off to a slow start to say the least.

But what about the training?

Training programs for engineers on most airlines are woefully behind the actual delivery of the aircraft. On some airlines, the training programs of engineers have been dictated to the companies by the Air Line Pilots Association. On Eastern Air Lines for example, the original training period for the Electras was to be 12 weeks. This was cut to 6 when the pilots demanded "equal time" in training. After getting their "equal time" period of 6 weeks, the pilots further complained that the course was too long and it was subsequently cut to 4 weeks. This was done over the protest of the flight engineers department and the flight engineers union.

Training failures have not only occurred in the initial stages: at least one major airline is under fire from the FAA for not giving sufficient recurrent training to its engineers. On one airline some 15 violations have been found in the recurrent training program which is required by law.

Because of the weaknesses of the training programs, the flight engineers union has had to establish its own training program, given on members time and paid for with their money. We have had to write and distribute our own courses on jet engines, and we are now in the process of doing the same thing for the complicated electrical and electronic systems of the jets.

Flight engineer local groups have coordinated with State adult educational programs in California and New York to obtain additional jet engine and electrical training.

In addition, in at least five cities around the country local flight engineer groups have established courses taught by manufacturers' representatives.

Because of the obvious dangers inherent in the operation of jet aircraft, the Federal Aviation Agency has been acting rapidly and with muscle to punish offenders. In the past few weeks it has received some criticism in the press and I would like to take this opportunity to urge you as representatives of the public concerned with aviation problems, to support the courageous efforts of Pete Quesada and his staff to deal with the problems of our new jet era.

Memorial Address by Hymie Greenspan, of Dallas, Tells of Americanism

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, July 30, 1959

Mr. YARBOROUGH. Mr. President, every American needs to pause at intervals and reflect on the heritage which is his. I believe a recent memorial address

delivered by Hymie Greenspan of Dallas, Tex., national vice commander for the seventh region of the Jewish War Veterans of the United States, helps call to mind the principles and ideals of our country.

I ask unanimous consent to have printed in the Appendix of the RECORD the talk delivered by Mr. Greenspan at the Jewish war dead memorial of Dallas Post 256 in the Shearith Israel Memorial Cemetery at Dallas, Tex., on May 31, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF HYMIE GREENSPAN, OF DALLAS, NATIONAL VICE COMMANDER, SEVENTH REGION, JEWISH WAR VETERANS OF THE UNITED STATES OF AMERICA, ON MAY 31, 1959, AT THE JEWISH WAR DEAD MEMORIAL OF DALLAS POST 256 AT THE SHEARITH ISRAEL MEMORIAL CEMETARY AT DALLAS, TEX.

Today, Memorial Day 1959, as we place the flag of our country upon the final resting places of our comrades, we must pause and realize the principles for which these men fought and died upon the fields of battle. The heroism, the sacrifices, and the unselfish devotion to duty of Americans of all creeds, during the time of war, were offerings placed upon the altar of human equality, liberty of conscience and American democracy.

We, the Jewish War Veterans of Dallas are proud of the distinguished record of the men of our faith upon the battlefields of every war in which our country has participated. They have woven the pattern of their patriotic and loyal devotion into the very fabric and structure of our American way of life. They, who have gone before, have thrown to us the torch of service and patriotism so that we might carry it forward against the benighted powers of bigotry and the dictatorships of the world.

Today, more than ever before, all Americans must realize that "eternal vigilance is the price of liberty." This eternal vigilance it is our purpose to keep, in order that we may pass on to American generations yet unborn, undimmed and undiminished, their God-given rights of life, liberty, and the pursuit of happiness.

Let us remember the grim and bitter lessons of other wars; let us remember the sufferings and the sacrifices that were made; let us remember the destruction and the devastation that they brought upon mankind: let them be a constant reminder that America must win the peace as well as the armed conflicts, so that, Americans who laid down their lives upon the battlefields of the world, shall not have died in vain. That we, who remain today, shall rededicate ourselves and our lives to the true principles of our American way of life and live by those principles for which the men and women to whom we pay tribute; and those, whom we memorialize today, so unselfishly laid down their very lives.

U.S. Farm Subsidies

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 16, 1959

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include a letter to the editor of Life magazine on farm subsidies from the Deer Creek Pilot, Rolling Fork, Miss.:

[From the Deer Creek Pilot, July 24, 1959]

FARM ECONOMIST ANSWERS LIFE EDITORIAL ON U.S. FARM SUBSIDIES

EDITORS, LIFE MAGAZINE,
Chicago, Ill.

SIRS: Your editorial, "A Tax Cut You Can Aid," is typical of many appearing these days in that it presents only a small part of the total subsidy picture, and, as usual, points the finger of scorn at agriculture. It is replete with distortions regarding Federal farm programs designed to turn city people still more against farmers. It is time more was said in defense of the American farmer. You owe it to your readers to present a more complete picture of subsidies and farm programs.

The subsidies-in-reverse, from farm people to city people are seldom publicized or editorialized. The flow of farm youth, raised and educated at the expense of rural communities, from farms to city jobs is a subsidy to our economic growth impossible to measure in dollars. Increasing farm production and improved marketing have benefited consumers more than farmers and are the second important subsidy in reverse. Never in any time or in any place have so few farmers produced so much high quality output for so many people at such reasonable prices.

The cost-of-living index has been quite stable since last June, courtesy of the American farmer. Food prices have been declining enough to offset rising prices for other good and services. Lower food prices in the retail store mean lower prices received by farmers for their products. Marketing costs have not declined. Yet you blame price supports for the high cost of food and clothing. If wheat farmers donated the wheat for making bread, the cost of a 25-cent loaf of white bread would be only about 2 cents less. The cost of a $4 man's dress shirt would be reduced by only 30 cents if cotton were free.

Farm subsidies have been widely publicized and criticized. Little is known or said about the hundreds of nonfarm subsidies which have benefited business, industry, and the general public since this Nation began. Those who are so ready to criticize agriculture are often doing very well with subsidy arrangements of their own.

For example, if you are so interested in reducing taxes, you might show the way for other newspapers and magazines by paying your own way through the mails. A special study on subsidies, published in Department of Agriculture appropriations for 1959, hearings before the subcommittee of the Committee on Appropriations, House of Representatives, 85th Congress, 2d session, pages 152–166, shows that Life enjoys an estimated annual postal subsidy of $9.5 million or 7.5 cents a copy. This is several times the wheat and cotton loans cited in your editorial as having been received by two corporation farms. Note that these were loans secured by the farm commodities upon which the loans were made; the taxpayers at least have something to show for their money. This study also reports that second-class mail subsidies (newspapers and magazines) amounted to $3.2 billion from 1932 through 1956. Third class mail (advertising circulars, catalogs, etc.) was subsidized $1.8 billion in this period.

Other important nonfarm subsidies include: business war reconversion payments during and after World War II, $43.3 billion (agriculture helped win the war too); maritime organizations, $3.5 billion, 1938–57; airlines, airports and facilities, $362 million in 1958 alone. Depletion allowances on petroleum, natural gas and minerals provide billions in subsidies to firms engaged in exploiting these natural resources. These are just a few of the many direct and indirect subsidies to nonfarm businesses and individuals such as tariffs, patents, copyrights, grants, tax concessions, and supplying goods and services at less than cost. The important point is that farmers are not the only group in our society receiving subsidies.

You state that the farm support program has cost taxpayers $18 billion in the past 25 years. This apparently ignores the recovery of much of the Government's investment in farm commodities.

The USDA in a report, "Commodity Credit Corporation Charts," November 1958, shows a cumulative net loss of $5.7 billion for 1933–58. Losses will increase in 1959 and subsequent years unless production can be brought more into line with use. We cannot indefinitely accumulate stocks of farm commodities. It should be noted, however, that twice in the past 20 years our burdensome farm surpluses suddenly became strategic reserves.

Another common misconception is that all USDA appropriations are direct-to-farmer subsidies which increase taxes and food costs. Actually many USDA activities benefit the rest of us more than farmers. Programs to expand farm commodity exports make an important contribution to keeping the free world free but the entire fiscal 1958–59 cost of over $850 million is charged to agriculture. The research and educational activities benefit industry and the public as well as farmers. Meat inspection cost $17 million last year to assure the public of a clean, wholesome supply of meat; it's administered by USDA. The school lunch program subsidized 22 million (mostly city) school children in 1958 but cost $100 million, included in USDA appropriations. Over 50 million vacationing Americans visited the national forest last year; the Forest Service appropriation of $120 million comes under USDA.

PROPER PERSPECTIVE

It is not my purpose to defend farm price support programs as they now exist or to justify farm subsidies on the grounds that others get them, too; but rather to place them in their proper perspective. Present programs have not solved farm problems. But the only solution you and other critics have to offer is to do away with farm price and production controls, get the Government out of agriculture and set the farmer free to produce, market, compete—and go broke.

Even if farmers are willing to accept this approach, can the Nation afford to ignore the effects of the attendant consequences upon the rest of the economy? We can get adjustments in agriculture in this manner—adjustments of the type farmers went through in the 1920's and 1930's. Keep in mind that the free market would be free on one side only. Prices farmers receive would be free to drop to disaster levels; farm costs, on the other hand would decline little if any, and then only for items farmers buy from other farmers. Most nonfarm industries have rather effective methods of their own for controlling production and maintaining prices. This would put farmers through the financial wringer with resulting bankruptcies, mortgage foreclosures, tax delinquencies, etc. Lower farm incomes mean reduced purchases of industrial products by farmers.

These are the consequences which are usually ignored in the current loose talk about "getting the Government out of agriculture." So long as the farmers are not effectively organized, they must look to the Federal Government for economic and political bargaining power comparable to that of big business and big labor, which do not operate under the one-sided free market conditions being adovcated for agriculture.

EVERETT E. PETERSON,
Agricultural Economist, University of Nebraska.

Capital Times of Madison Denounces Military Waste

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, July 30, 1959

Mr. PROXMIRE. Mr. President, the junior Senator from Alabama [Mr. SPARKMAN] recently delivered a hard-hitting attack in the Senate on the waste and extravagance in our Military Establishment and the failure of the military to provide any kind of an adequate opportunity for small business to share in the multibillion dollar national defense program. I was particularly impressed by the Senator's speech because a few days before it was delivered, competent and convincing witnesses before the Small Business Subcommittee of the Banking and Currency Committee had testified to exactly the same thing.

At that hearing I asked these witnesses whether, in their judgment as businessmen who had been dealing with the Defense Department successfully for years, a greater share of defense could be bought by our Government on a cost-saving, competitive bid basis, the area where small business and the taxpayer both have a chance. Their answers shocked and surprised me. They told me that with any kind of real determination in the Defense Department the present distribution of 85 percent negotiated and 15 percent competitive bidding could be if not reversed, at least drastically changed to a 25 percent negotiated and 75 percent competitively bid. And these were businessmen speaking in a congressional hearing, not theorists or politicians stirring up the home folks in the heat of an election campaign.

Mr. President, the Capital Times of Madison spells out the extent of the cost of this give-away procurement program in an indignant editorial of a few days ago; and I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WASTE AND INEFFICIENCY IN NATIONAL DEFENSE PROGRAM

Senator JOHN SPARKMAN, Democrat, Alabama, chairman of the Senate Small Business Committee, made a blistering attack Monday on the waste and inefficiency in the Defense Department which is costing the American taxpayers millions of dollars.

But this significant speech will get little attention in the press which likes to talk about economy in government.

Senator SPARKMAN drove hard at the point that big business preference in the awarding of contracts is a primary cause of the waste. Twenty large companies, he said, are getting 50 percent of the defense contracts.

"To a large degree we have turned the small businessman out to pasture as far as military procurement is concerned," he said.

There is a myth existent in this country that big business is far more efficient in the production of military goods, so very little is said about the fact that 85 percent of defense work is let on negotiated contracts rather than on competitive bidding.

The folly of this myth is well illustrated by some findings of the Sparkman committee published in the current issue of the Progressive magazine:

In spite of the administration's lipservice to the free enterprise rule of competition, 85 percent of the $23 billion the Pentagon is spending this year for weapons is being spent on negotiated contracts—without competitive bidding. What this means in dollars is brought out graphically by a few of the many examples provided by Senator JOHN SPARKMAN, speaking as a member of the Senate Small Business Committee:

When the Navy ordered a gear assembly from Westinghouse on a noncompetitive basis it paid $277.44 on competitive bidding. Glove Gear, a small company, supplied the same gear for $27.50—a saving of 90 percent.

The Navy paid General Electric $82 per unit for carbon packing. On competitive bidding it got the same item for $15.

Bearing sleeves cost $425 when purchased from Allis-Chalmers on a negotiated basis—$189.50 on a competitive bid by the Waukesha Bearing Co.

Michigan's Democratic Representative MARTHA W. GRIFFITHS estimated that "if we cut out cost-plus contracts and used competitive bidding, we could save $5 billion. Someone from the Pentagon called me and said 'You're wrong; we could save $7 billion'."

It is this kind of waste that is draining the American taxpayer dry, but it is the feeble social welfare programs that get the blame.

House Labor Comes Through

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. GIAIMO. Mr. Speaker, since the introduction of the Elliott bill, H.R. 8342, the Labor Management Reporting and Disclosure Act of 1959, as written by my Committee—the Committee on Education and Labor—there have been opinions on the part of management organizations and labor organizations expressing disssatisfaction with the bill. On the one hand, it is called weak and ineffective. On the other, it is called union busting. Others call it watered down, or a compromise.

In my opinion, Mr. Speaker, the Elliott bill is none of these. We all recognize, I am sure, that we must pass legislation this year which will effectively curb the racketeering and abuses which exist in this field of labor-management relations. We all recognize the need for some changes in the provisions of the Taft-Hartley law. The great majority of unions are honest and well conducted and will have no difficulties living with the provisions of this bill. I believe that the Elliott bill steers a sound middle course between legislation which is effective in correcting the abuses in some labor unions without crippling the legitimate operations of trade unions in their most important economic and social functions.

Mr. Speaker, 30 members in my committee have met almost daily for the past 5 weeks trying to write a labor-management reform bill that would be in the best interests of our country as a whole. Some on the committee favored an extremely strong bill; others a weak bill; and some of us urged moderation between the two extremes. There were many individual shades of opinion on that committee. The result of the deliberations is the Elliott bill which to me most nearly represents the most desirable course of action to be taken by this Congress.

Many newspapers and magazines throughout the country have taken a dim view of the Elliott bill terming it "weak" and "watered down." I believe these charges to be unfair and untrue. The following editorial from the Washington Post reflects, I believe, a sober, objective analysis of the labor problem facing this Congress:

[From the Washington Post, July 20, 1959]

HOUSE LABOR COMES THROUGH

It is not yet possible to appraise all the 90 or more amendments attached to the Kennedy-Ervin bill by the House Committee on Education and Labor. Some of these changes would doubtless have the effect of weakening the measure. Some others would make notable improvements. In at least two respects the committee has done well: It resisted the temptation to bottle up the bill and let it die, and it refused to eliminate some of the provisions that some unions and their friends fought most vehemently.

Among the improvements made in the bill two stand out very prominently. First, the committee knocked out the ineffectual and troublesome provision of the Taft-Hartley Act requiring non-Communist affidavits from union leaders. The Senate had extended this oath requirement to employers, thus compounding the folly. The House committee dealt more directly with the problem by forbidding Communists to hold union offices. Second, the committee rejected completely the Senate's unworkable solution of the so-called no man's land dilemma.

Cases in the no man's land are those over which the National Labor Relations Board has jurisdiction but which it has never been able to handle for want of time and manpower. The Senate would let the States decide these cases, providing they applied Federal law as interpreted by the NLRB. This curious farming out of a Federal administrative chore to boards responsible to the States (and many States have no such boards) could lead only to chaos.

The House committee would wisely require the NLRB to do its own work and give it more manpower and decentralized machinery to make that possible. It would increase the board's membership from five to seven. As the board operates in panels of three in many cases and as each member has a substantial staff, this would add materially to available manpower. Even more important, the committee would allow representation election cases to be handled by regional offices of the NLRB. This would keep representation matters in the hands of officials closer to the scene, and would allow the Board in Washington to concentrate on unfair labor practice cases. It should not be difficult to convert the Senate to this notable improvement in its bill.

Other substantial achievements are the acceptance of the Senate bill's hot cargo and picketing provisions in the face of tremendous pressure from the spokesmen for organized labor. To be sure, the hot-cargo provision aimed chiefly at the Teamsters

Union was amended so that under its terms an employer could not discharge an individual truck driver who refused to cross a picket line for the delivery of goods to a second firm that might be engaged in a labor dispute. Some of the experts say this only make explicit what the Senate bill intended; others say it rips a hole in the Senate's hot-cargo safeguard. But, in any event, the committee showed a good deal of courage in retaining the provision in any form. The Senate's curbs on organizational picketing were left unchanged.

The committee also resisted efforts to kill the so-called bill of rights, merely changing the enforcement mechanism from criminal penalties to injunctions for the protection of individual union members. This may be an improvement. On the whole, the committee is entitled to congratulations for a good piece of work. It has immeasurably improved the chances of getting a sound labor reform bill enacted.

Post Office Gamble

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, July 30, 1959

Mr. BEALL. Mr. President, it is always pleasant to see recognition—especially public recognition—accorded to a job well done. During the past year, the Baltimore post office, under Postmaster William F. Laukaitis, inaugurated an experiment dealing with late evening pickups of mail which, after receiving extensive private acclaim, has now been praised in a newspaper editorial.

I ask unanimous consent that this editorial from the July 18 edition of the Evening Sun, of Baltimore, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Baltimore Evening Sun, July 18, 1959]

POST OFFICE GAMBLE

So much criticism is turned upon the Post Office—sometimes justified, sometimes not—that the public's chance to offer a congratulatory word ought not to be missed. Last fall the Post Office saw there might be an unmet need for more late evening pick-ups. Some businesses, particularly small ones, might be cleaning up the mail as late as 8 or 9 in the evening. Some ordinary citizens might dash off a quick letter after supper. Both might want to see their mail speeded on its way without going to the trouble and expense of running to the Post Office itself.

Without knowing how the scheme would work out, the Post Office decided to try designating 185 selected mail boxes as late-hour collection points and marking them plainly. It worked. In only 9 months—and it sometimes take quite a while for such things to catch on—the public has been responding enthusiastically. The collections made from the express boxes between 9 and 10 in the evening range from 150 to 1,000 or more pieces and the Post Office is thinking of expanding the system. Everybody concerned is happy.

The pleasant feature of this trial is that the Post Office wasn't afraid to try something it was uncertain about. It took a small but imaginative gamble—the kind of thing that private business often does and Government businesses are frequently accused of not doing. Postmaster William F. Laukaitis says he is "very highly pleased." So, we presume to say, is the public.

Opposition to Downtown Routing of the Interstate Highway System Through Reno, Nev.

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. BARING. Mr. Speaker, under leave to extend my remarks, I would like to submit a copy of a letter that I have addressed to the President.

For 2 years I have opposed a downtown routing through Reno, Nev., of the Interstate Highway System. I have done this because I object to the reckless spending of Federal funds at the instance of the Bureau of Public Roads to acquire expensive property and to build elaborate superstructures which actually defeat rather than implement the spirit of the Federal Highway Act of 1956.

In Reno alone if the freeway were routed around the city rather than through it the Government would save approximately $20 million. If there are 1,000 Reno's throughout the country the savings would be in the billions of dollars rather than millions. At this time when the administration has called upon Congress for more money with a warning that unless Congress acts promptly highway work must cease, I feel that my letter is most timely. The complete text follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., July 28, 1959.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: I note with considerable concern that your administration has warned that contracting for new interstate highways will be halted for a number of months if Congress does not act soon to provide more money.

If what has taken place in the planning of an interstate highway through the city of Reno, Nev., is an example of how the Bureau of Public Roads is spending Federal funds, to say that I am not surprised that they are out of money is a gross understatement. For more than 2 years I have done everything within my power to prevent the routing of this highway through the very center of downtown Reno, thus bisecting the city and causing irreparable damage to its industrial growth. I have written to the Bureau of Public Roads and charged that they coerced the board of county commissioners in the selection of a route from the California-Nevada State line to Lawtons, which is a point 7 miles west of Reno. This point lies south of a solid rock saddle automatically forcing the freeway through Reno instead of following the north rim course which the citizens of Reno endorse.

As you know, whenever a transcontinental highway is routed through an urban area, the law requires that the economic impact of such routing be considered. There was a congressional investigation of this matter held in Reno early this year by a special subcommittee of the Commtitee on Government Operations, chairmaned by JOHN BLATNIK.

On page 19 of House Report No. 292, which is attached for your convenience, you will note that the committee concluded that the consideration of a route and its economic impact upon the community in which the route is located should be based upon more than the removal of property from the tax rolls.

On page 14 under "Comments of the Committee," it is noted that "except for some testimony on the tax revenue loss to Reno as a result of approval of the Third Street route, the record contains little discussion of the economic effects of route selection. There is some testimony concerning economic effects with respect to the Sparks area presented by witnesses supporting the routing in that area, but testimony of local and State officials is silent on this point." Here, clearly, is a failure to comply with the provisions of law.

Now, considering my charge that the Bureau of Public Roads coerced the board of county commissioners in their ratification of the highway routing from the California-Nevada State line to Lawtons, please read their comments on page 17 that the "county officials who had not personally examined line J in Verdi prior to their initial approval of the line, reversed themselves after such examination, and subsequently reinstated the initial approval following realinement that met their objections." You will note the State approved line J in advance of the public hearings and that the Bureau of Public Roads had acquiesced in State approval in advance of these hearings

Back in 1957 Frank Turner, of the Bureau of Public Roads, sent a telegram to a Mr. Farin, regional engineer for the Bureau in San Francisco, stating that no Federal funds would be made available for any route other than line J from the California State line to Lawtons. The following day Farin transmitted this wire to William Howard Smith, State engineer for the Bureau of Public Roads, who in turn wired Mr. Peterson, chairman of the board of county commissioners, Washoe County. At the same time, Mr. Turner also phoned Commissioner Peterson. The following day he held a special meeting of the board of county commissioners, at which line J was again ratified. You will note the report states that the telegram originally sent by Frank Turner and the other two noted above was obviously designed to influence action that accorded with earlier State and Bureau of Public Roads approval of line J, and that a local body faced with a telegram that line J is the "only location acceptable for the expenditure of Federal interstate funds" has little room for deliberation.

Why was the Bureau of Public Roads so determined to follow line J, which would necessitate building a trestle over a ravine 125 feet deep, when they could have selected a route around the northern mountain slopes continuing north Reno and across the meadows east of Reno which would follow the natural contours of the north rim and require no superstructures? We are now talking about spending Federal funds.

At the public hearings required by State law an employee of the Bureau of Public Roads made it very evident that the Bureau would not consider any route outside of the city limits of Reno. Mr Turner also informed the Governor of my State that he would not consider a proposal skirting Reno to the north.

Before comparing cost estimates, let me first direct your attention to page 10 of the Blatnik report. Back in 1955 a firm of consultants were employed to make a study of both local, and through traffic. From this

study benefit-cost ratio factors were assigned to six proposed routes. A so-called northern bypass route was assigned a benefit-cost ratio of 6.9. Third Street (elevated) as submitted to the Bureau of Public Roads by the State highway department had a benefit-cost ratio factor of only 5.1. Now, if you will note below "Additional Bureau of Public Roads Estimates," the Bureau estimated a benefit-cost ratio of 1.1 for the north rim. I might say here that the northern bypass and the north rim lines are probably no more than six blocks apart and the north rim route is only approximately 17 blocks from the center of Reno. It is absolutely ridiculous to even assume that line F would yield approximately six times the benefit that line R would yield. In the first place, highways form new traffic patterns and either improve the economic growth of a community or depress it. So-called benefit-cost ratio factors are nebulous and absurd and still the Bureau of Public Roads from the very beginning refers to the north rim 1.1 factor as a product of the consultants' study. Right here in my office Frank Turner, on several occasions, told me that the north rim could not be considered since it only carried a benefit-cost ratio factor of 1.1 while the Third Street line carried a benefit-cost ratio of 5.1.

Now let's consider cost. As I have said, the city of Reno is but a speck on the map and is located in a bowl formation. To the north of Reno are gentle mountain slopes. A highway following this contour could be prepared for laying concrete with a couple of bulldozers in 30 days. I have traveled every inch of this route on foot and I would say today that the entire distance from the California line to the meadows east of Reno could be traveled by jeep. In contrast, I have already mentioned that line J, as approved, would necessitate building a trestle 125 feet in the air. Line O through Reno crosses the Truckee River several times and one Y-shaped bridge diagonally crossing the river at the police station would conservatively cost at least $3 million. The Bureau of Public Roads admits that the north rim route could be completed for about $17 million. It would cost many millions more to run a highway through the center of town.

I will not quote figures because at best all figures quoted are no more than learned estimates. It is a simple fact that its costs money to build an elevated highway and it also costs money to build underpasses and overpasses. This is why the Brueau of Public Roads is now crying for more money. I would be reluctant to support any appropriation or gasoline tax bill until there is a thorough investigation of the Bureau of Public Roads. I do not understand why a small bureaucratic governmental agency can force an interstate transcontinental highway through the heart of a city as small as Reno, knocking out millions of dollars of personal property, and dislocating business establishments which employ thousands of people, against the will of the citizens of Reno. I say against their will advisedly, because I have in my office some 17,000 names on petitions opposing a downtown routing.

According to a plan presented to the Bureau of Public Roads by the State highway department there are 13 turns within the city limits, a stretch only 5 miles long. It was described by an expert as a loop-to-loop, shoot-to-shoot affair that would give a hot rodder a cheap thrill driving 40 miles per hour. Why the turns? To miss certain pieces of property predestined not to be disturbed. There is no bottleneck traveling through Reno from east to west. There is from north to south, because of the railroad crossing adjacent to Third Street.

The original plan called for two railroad underpasses, which were rejected by the Bureau of Public Roads. Now the State plans to divert urban and secondary funds to build these underpasses. In other words, it would be the biggest swindle ever perpetrated in the State of Nevada—a steal of all funds allocated to the State from all other counties to build a 5-mile elevated concrete superhighway through 5 miles of Reno. This reckless spending cannot be justified. If Reno is an example of highway planning throughout the country, and I believe it is, it would cost our taxpayers billions of dollars in excess of a reasonable program cost figure and would still not accomplish the intent of the Federal-Aid Highway Act of 1956.

I understand that you have asked that the program not be bogged down through the purchase of expensive personal property in urban areas. I know there are highway scandals in the shadows of the Capitol which will be brought to light by those other than myself. I urge, Mr. President, that immediate steps be taken, not only to investigate present activities of the Bureau of Public Roads, but also to regulate its future conduct, and that they be forced to curb their excessive spending as a step toward balancing our national budget.

To expressly reflect the attitude of the Bureau of Public Roads in this regard during the John Blatnik investigation, I specifically asked Mr. Turner if he was willing to spend three to four times as much Federal moneys to route the freeway through downtown Reno as it would cost to skirt the city, and he replied that he was, and when I asked where the money would come from, he quipped you are the Congressman, that's your job.

As a result of their support of the proposed Third Street routing of the freeway we now have a new Governor, a new comptroller, and a new attorney general, who constitute the State highway board. We also have a new mayor, a new city council and, with the exception of two members who did not commit themselves, a new board of county commissioners. It has just been called to my attention that the mayor and the new city council now definitely oppose the Third Street routing and that the State highway board would be willing to reconsider the entire matter if the Bureau of Public Roads indicated that this was their prerogative. This should be done by a letter from the Bureau of Public Roads to the State highway department. I strongly urge that you so instruct the Bureau of Public Roads and that Mr. Frank Turner withdraw his statement that Federal funds could not be made available for the north rim route since the benefit-cost ratio of 1.1 was merely a "guestimate" assigned by the Bureau of Public Roads and completely unrelated to the traffic study made in 1955.

I respectfully request a reply to this letter at your earliest convenience.

Respectfully,

WALTER S. BARING,
Congressman for Nevada.

(NOTE.—Line F, northern bypass; line O, Third Street (elevated); line R, north rim; line J, California line to Lawtons.)

Campaign Against Tuberculosis in New Jersey

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, July 30, 1959

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement prepared by the junior Senator from New Jersey [Mr. WILLIAMS], with an Associated Press release of July 18 referred to in his statement.

There being no objection, the statement and release were ordered to be printed in the RECORD, as follows:

The battle against disease throughout the world has attracted considerable attention in the Senate and House this year, and with good reason. From small town councils to the specialist committees of the United Nations, a new optimism about final victory over affliction is in the making.

Dr. Roscoe P. Kandle, who became the New Jersey State Health Commissioner this month, had some very interesting things to say recently about the possible victory over tuberculosis in that State. His interview with an Associated Press reporter also deals with other matters. I attach hereto an Associated Press release of July 18 from the Atlantic City Press.

STATE HEALTH CHIEF SEES DEATH OF TUBERCULOSIS

TRENTON.—New Jersey's new health commissioner thinks tuberculosis in this State can be completely wiped out.

And he thinks his department needs to make the same sort of intensive drive against polio by getting everyone vaccinated.

Dr. Roscoe Kandle, 50, of Pitman, a soft-spoken, slightly balding man with a varied health work background, has been on the job since July 1.

He replaced his close personal friend, Dr. Daniel Bergsma of North Haledon.

Bergsma resigned after 10 years in office to become associate medical director of the National Foundation (for infantile paralysis).

In some ways it has been old home week for the new director. He was head of the department's division of preventable diseases for a year in 1947. Many of his friends are still on the job.

SOUTH JERSEY POST

Before that he was southern district health officer, responsible for Camden, Cumberland, Gloucester and Salem Counties.

Kandle said in an interview his fondest wish is to finish the job of tuberculosis control.

"I'm tremendously impressed at the progress we've made," he said, "but we need to settle down and ferret out each source case.

"Our aim is complete eradication—and I think it will come."

The Pitman native said that on polio it gets harder to sell vaccination as the nonimmunized group gets smaller.

"People ought to want to protect their own children," he added, and pointed out they can get free shots at many clinics if they can't pay a doctor.

Kandle said diphtheria was brought under control when 65 percent of the people had been vaccinated, but polio may require 90 percent vaccination.

OTHER POINTS

On other points, he said:

1. Prospects are not so good for effective air pollution control because of automobile exhaust and other fumes. "I don't know how clean the air is going to get," he said, and both New York and New Jersey are "sinners."

2. The department can work on malnutrition in babies and older folks as a way to cut down some mental illness.

3. While Bergsma wanted a big program of State aid for health agencies, Kandle feels "you have to live within your budget."

Since leaving the New Jersey Health Department 10 years ago, Kandle has been in many positions around the country, including field director of the American Public Health Association.

He feels New Jersey's health services to its 5,600,000 citizens are better than the average in the United States.

Kandle operates out of a modernized air-conditioned headquarters in midtown Trenton—at 129 East Hanover Street.

Kandle and his wife are now seeking a home in the Trenton area.

They have three children—George, a Princeton Seminary student; John, Eastern New Mexico University student, and Catherine, 9.

American Labor's Growing Role in Diplomacy

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. PUCINSKI. Mr. Speaker, I have the pleasure of introducing into the RECORD today an article which appeared in the Chicago Daily News on American labor's growing role in diplomacy.

This article is of particular importance at this time when all American labor leaders are being blanketly indicted by many enemies of the labor movement because of the defalcation of the few.

Mr. Milt Freudenheim of the Daily News wire service quite appropriately points out that American labor union men, with their counterparts abroad, may be crucial in holding the vast underdeveloped nations friendly to the free world.

I think we Americans do a great disservice and a great injustice to the decent men of the American labor movement who have fought hard to preserve democratic principles in this country and who have given of their time and effort to help our State Department develop contacts abroad simply because a few representatives of labor have gone astray.

Only recently, Mr. George Meany, president of the AFL–CIO, and a large delegation of other respectable labor leaders returned from an international conference of labor spokesmen from all over the world, which was held in Europe. Their mission to Europe has been highly praised by those seeking a better understanding among all nations.

I wish to call attention of this article to the Members of this House at this particular time, when in a few days we, as Members of Congress, must give serious thought to the entire question of how far do we want to tie the hands of the American labor movement and its legitimate spokesmen.

I hope that my colleagues will ponder the full impact of this article as they proceed to make their ultimate decision. Those who have been advocating extremist labor reform have made capital only of the abuses in the labor movement and very conveniently overlooked the fact that the trade movement of America has indeed produced great and dedicated leaders who have worked steadfastly not only to raise the standard of living in our own country to the highest in the world, but within the framework of our free enterprise system, have bravely fought off those who would try to sell communism and other foreign ideologies to our people.

Are these the men that we want to drive out of the labor movement through punitive legislation, which goes clearly beyond the scope of labor-management reform?

I think it is high time that we showed the American people that not everything in the labor movement is bad but that, to the contrary, by an overwhelming majority, those truly dedicated to the principles of trade unionism have served their country well.

Mr. Speaker, the Daily News article follows:

AMERICAN LABOR'S GROWING ROLE IN DIPLOMACY

(By Milt Freudenheim)

NEW YORK.—Contacts by American labor union men with their counterparts abroad who wield great political power may be crucial in holding the vast underdeveloped nations friendly to the free world.

George Cabot Lodge, U.S. Assistant Secretary of Labor for International Affairs, calls for stepping up these contacts, using American assets to beat the Communists at one of their favorite games.

Writing on "Labor's Role in New Countries," in Foreign Affairs Quarterly, Lodge says worker groups in the newer nations are a crucial force and often are the only leadership aside from the educated elite.

He believes that the United States must be prepared to make the same effort in behalf of worldwide economic progress as we have exercised in building military strength to deter aggression.

"The Communists have increased substantially their influence in the labor movements of Asia, Africa and Latin America," notes Lodge, son of the U.S. Ambassador at the United Nations, Henry Cabot Lodge.

They concentrate on key industries, such as steel in India, inviting large numbers of young labor leaders to Moscow each year for a highly developed course of indoctrination.

In areas where anyone who has taken a plane ride to a faroff country is looked upon with awe, these Moscow visitors return to find eager listeners for their far-flung promises of "easy money and full bellies * * * by the shorter Russian route of totaltarianism."

But American union leaders also carry tremendous prestige in the same countries. They are innocently credited with "singlehandedly" wresting the high standards for American workers from "capitalist" hands.

Lodge calls for renewed support for the Government exchange program which annually brings 900 trade unionists to the United States from abroad for from 3 to 9-month stays.

"The leaders and members of foreign workers organizations can see firsthand the extent to which American labor has confounded the 100-year-old prediction of Karl Marx," Lodge points out.

He also urges increasing the present 48 labor attachés now serving with American embassies abroad, and maintaining U.S. support for the International Labor Organization (ILO).

In ILO, he says, not government spokesmen but workers have been most effective in spotlighting Communist totalitarianism for the delegates of new nations to see.

"The day has long since gone," Lodge says, "when relations with other countries can be effectively carried on solely in the traditional 'diplomatic' way at the usual 'diplomatic' levels.

"The power of Africa and Asia is often not in the hands of government officials, but rather in the hands of relatively obscure native leaders who first appear on the national scene as leaders of a workers' organization," Lodge concludes.

MATS Must Be Ready at All Times

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, July 30, 1959

Mr. THURMOND. Mr. President, a very excellent summary of the case for MATS which was discussed at length on the Senate floor during the consideration of the Defense Appropriation Act for fiscal 1960 appeared in the July 28 issue of the Greenville News, a newspaper published in Greenville, S.C., in an editorial entitled "MATS Must Be Ready at All Times." I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Greenville (S.C.) News, July 28, 1959]

MATS MUST BE READY AT ALL TIMES

Almost every American has heard of SAC, our Strategic Air Command which is our first line of defense against an atomic attack by an enemy. SAC is on 24-hour alert and in times of suspected emergency has planes in the air, armed and ready to deliver a counter blow on order from the proper authorities.

Fewer people know about STRAC, our Strategic Army Command composed of two airborne divisions and two infantry divisions which are trained and ready to go to any part of the world on command and fight a limited war. Some of these troops were dispatched to Latin America a few months ago when Vice President NIXON ran into trouble. Many of them, a whole battle group in fact, were airlifted to Lebanon when things were threatening to blow sky high in the Middle East.

Even fewer people know that these two vital forces, SAC and STRAC are dependent on adequate airlift in the event that they are called on for any sort of sustained action in any part of the world.

Let us state at the outset that both of these forces are prepared and ready for quick action in an emergency.

SAC can mount a counterattack almost instantly. STRAC can move the first elements of a combat-ready division in 2 hours and can have a whole division ready to move in a few more hours. And, if the need arose, the U.S. Air Force, working through the Military Air Transport Service could cancel all other commitments and move them.

MATS keeps enough planes in reserve at all times to start such a movement, but what probably would happen after that is part of the subject of this editorial.

Back to SAC for a moment. It is contemplated that the initial counterattack would be mounted from bases within the continental United States. Extra fuel needed to get the planes to their targets and back would be provided by Air Force tankers.

But, after that initial counter attack, things would be different. To move in on the enemy, we would have to establish bases closer to his borders. This would mean a vast movement of men, fuel, equipment, armaments and other supplies in a hurry. This means airlift.

The same goes for STRAC operations. It is one thing to drop the initial assault forces in to a combat area. It is quite another to reinforce them, to resupply them with food, ammunition and all of the equipment needed to maintain a division or an army in the field.

This would mean still more airlift, because we no longer can wait for weeks while those men, equipment and supplies are loaded aboard ships and laboriously convoyed across thousands of miles of submarine-infested ocean.

We are less familiar with the problems of sustaining a naval operation, but we understand enough of the overall principles of logistics to know that keeping a fleet in combat would entail the same sort of requirements in terms of airlift.

If war comes again, global or local, it will come swiftly and it will be fought swiftly. Without adequate airlift, we can expect to be defeated in a hurry in either event.

This is where MATS—and Donaldson Air Force Base, a MATS base, come in.

For the fact is that MATS is being held back and eroded. It does not have enough of the most modern aircraft.

We first ran into this a few months ago when we had occasion to observe at close hand a massive maneuver of one of the Nation's crack airborne divisions. One of the few things the commanders of that division were reluctant to talk about (as a matter of fact they refused to talk about it at all, except to discuss how fast they could move the first elements and be ready to move the others) was the availability of air transport.

The problem was spotlighted during recent days in columns by Holmes Alexander on this page when he told of flying with military people in outmoded aircraft long since abandoned by private airlines.

Senator STROM THURMOND focussed the light again when he sought to persuade the U.S. Senate to cut back on its use of civilian airlines and put the funds into MATS operations.

We have no objection to military use of civilian airlines. In fact, in limited movements of personnel and equipment, it is feasible to use private lines. But it is hard to mesh military and civilian operations. And when MATS crews are flying empty or nearly empty planes in order to maintain their flight proficiency and to continue their training (and this has to be done) waste results.

Furthermore, Representative MENDEL RIVERS, of South Carolina, in a recent address in the House, revealed that fly-by-night airlines are being created by the operators of obsolete planes for the sole purpose of getting military air transport business. If war came, as Mr. RIVERS said, these lines would be useless.

MATS presently depends on the C-124 Globemaster, a fine airplane capable of long flights with heavy loads. But there aren't enough of them and they are relatively slow and becoming obsolete. The service also has a few C-130's and C-133's, faster turboprop craft also capable of carrying heavy loads and having the added capability of landing almost anywhere.

But there aren't enough of these.

That is what Holmes Alexander, the newsman, STROM THURMOND, the Senator, and MENDEL RIVERS, the Representative, are saying. And all three are in position to know what they are talking about.

Our great civilian air fleet, owned by private companies, is a nice thing to have in reserve. But these planes could not be converted to military use fast enough to meet a sudden emergency.

As MENDEL RIVERS says, the determining force in the next war, if it comes, will be the force that is in being when the first shot is fired.

Interest Rate Ceiling Limitation

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, tomorrow will mark the lapse of 7 weeks since the Committee on Ways and Means concluded public hearings on legislation requested by the administration 8 weeks ago to permit more flexible debt management. The administration requested the repeal of statutory interest rate ceilings on savings bonds and marketable bonds in order to facilitate efficient and economical debt management and to prevent any further erosion of the dollar from mounting inflationary pressures.

After the conclusion of those hearings 7 weeks ago the committee held extensive executive session on the administration's legislative request. Approximately 3 weeks ago we reached the point in those executive sessions where the majority of the committee had approved several controversial amendments and had instructed the chairman of the committee to introduce legislation embodying these tentative decisions. No further action has occurred.

Mr. Speaker, it appears that the "sit and wait" policy of the Democratic House leadership that has been applied to many other urgent legislative matters has been extended to include this most serious of all matters involving public confidence at home and abroad in the integrity of the national credit. The Republican members of the Committee on Ways and Means have made repeated efforts to have the Democratic leadership abandon its ostrichlike sit-and-wait policy in favor of a straightforward position of responsible action to give to the Secretary of the Treasury the necessary tools to safeguard against national financial crisis. On July 22, 1959, the Republican members of the committee joined in addressing a letter to the Speaker pointing out the urgent considerations that required prompt action on the administration's legislative proposal. We indicated that our reason for writing directly to the Speaker was in recognition of press statements attributed to him that "the legislation would not receive House consideration in the absence of administration concurrence in the amendments tentatively approved by the majority members of the committee." In our letter to the Speaker the Republican members of the committee also called attention to the fact that the majority-approved amendments were inflationary, destructive of public confidence, and costly in terms of debt management.

On July 27, 1959, I received in the mail a carbon copy of a document that appeared to be a statement by the Speaker issued to the press responding to our letter of July 22, 1959. Neither I nor any other Republican member of the Committee on Ways and Means has received any direct comment on this matter from the Democratic House leadership. So that the membership of the House may be informed in regard to this statement by the Speaker I will at this point in the RECORD insert the text of that statement.

SPEAKER RAYBURN'S STATEMENT IN REPLY TO THE LETTER SIGNED BY REPRESENTATIVE SIMPSON AND OTHER REPUBLICAN MEMBERS OF THE COMMITTEE ON WAYS AND MEANS, JULY 23, 1959

The Committee on Ways and Means moved promptly on the legislation to remove the statutory ceiling on the interest rate of long-term bonds, because it was aware that the request of the President deals with one of the most important issues facing us. Both the committee and I are fully aware of the gravity of the problems involved.

In substance, the committee gave the President the flexibility which he requested in the management of the public debt. The committee added two provisions to the legislation requested by the President.

First, instead of removing the ceiling permanently, the committee placed a 2-year limitation on the authority granted to the President.

Second, the committee required that before bonds could be issued at rates of interest above the existing ceiling, the President must make a finding that it is in the national interest to do so.

The only other provision which the committee added to the legislation was a declaration of the sense of Congress relative to the management of the public debt. This section states the concern of the Congress over the continuing rising costs of financing the public debt. It expresses the hope that further increases in interest rates can be avoided or minimized without interfering with efficient debt management and the Federal Reserve's efforts to preserve a sound currency.

Here is the language in question:

"It is the sense of Congress that the Federal Reserve System, while pursuing its primary mission of administering sound monetary policy, should to the maximum extent consistent therewith, utilize such means as will assist in the economical and efficient management of the public debt and in so doing the System should, where feasible, bring about needed future monetary expansion by purchasing U.S. securities, of varying maturities."

This is what the language does. It expresses the sense of Congress that the Federal Reserve System should assist the Treasury in the management of the public debt in a way that is consistent with the System's primary mission of administering a sound monetary policy. This language further expresses the preference of Congress that when it is necessary for the Board to carry out its function of expanding the supply of money and credit, this could be done whenever feasible by its purchase of U.S. securities. This language does not require or even urge any expansion of the credit supply that would not be desirable and necessary for economic growth. The language of the bill says simply that it is the sense of the Congress that wherever feasible this needed growth of the money supply could be provided through the purchase of Government securities. There is nothing new, unreasonable, or irresponsible in this procedure. I

need only to point out that the Federal Reserve banks already hold $26 billions of U.S. Government securities.

I have been forced to the conclusion that the Federal Reserve authorities have reached a point in their thinking where they consider themselves immune to any direction or suggestion by the Congress, let alone a simple expression of the sense of Congress. It appears that the fault of the suggested committee bill was not that the language itself was wrong, but that the Congress dared even to speak to the Federal Reserve, a creature of Congress.

The failure to move this bill is the failure on the part of the administration to understand that the Congress cannot be expected to be unconcerned about what might happen in the exercise of the authority granted to the President under the bill. It is the failure of the administration to accept the right of the Congress to express its concern within the statute, that this authority should not be exercised in ways which are not in the public interest. It is the failure of the administration to accept the right of Congress to place a time limit upon the exercise of this very substantial authority so that the Congress may, from time to time, reexamine the way that the authority is being exercised.

Since the responsible solution of this problem is of great importance to the country, it is disappointing that the Republican members of the Committee on Ways and Means have decided to play politics with it, particularly at a time when conferences were being held with responsible administration officials in an effort to resolve this problem. Every Republican member of the Committee on Ways and Means must have known of the efforts on the part of the leadership of the Congress and the Democratic members of the Committee on Ways and Means in meeting with representatives of the administration seeking a solution to this problem. They must have known that I, along with others, have been making every effort to resolve this problem in a way that is of the best interest to our country. We are not wedded to the language suggested by the committee, and despite the political activities of the committee minority, we will continue to make every effort to develop an effective solution to this problem. In my opinion, this is a matter far too important to get involved in partisan politics.

Mr. Speaker, having read in the press on the evening of July 23 the reaction of the Democratic leadership to our letter of July 22 charging unwarrantedly that our letter was a political play instead of a responsible request for responsible action, I issued a statement on July 24, 1959, responsible to the charge of the House Democratic leadership. So the record may be complete on this point I will also place my statement in the RECORD at this point.

The Honorable RICHARD M. SIMPSON, Republican, of Pennsylvania, ranking Republican Member of the House Committee on Ways and Means, today expressed regret that the Speaker of the House of Representatives had unwarrantedly chosen to characterize as a political play the pledge of support from the 10 Republican Members of the Committee on Ways and Means to assist in obtaining favorable House action on the administration's request for legislation to remove statutory interest rate ceilings to facilitate economical public debt management.

Mr. SIMPSON stated that the Speaker's reaction to the Republican joint letter of July 22, 1959, is an indication of the Democratic House leadership's vulnerability to the charge that if the Democratic leadership continues to thwart House action on this measure the Democratic majority in the House must accept the responsibility for the consequences of failure to act on a measure that involves the soundness of the Nation's currency and the integrity of the Nation's credit. Mr. SIMPSON noted that while neither he nor any other Republican Members of the Committee on Ways and Means had received a reply from the Speaker to their letter of July 22, the Speaker had claimed in a press statement "the leadership of the Congress and the Democratic Members of the Committee on Way and Means are seeking a solution to this problem." Mr. SIMPSON acknowledged encouragement from the fact that the Democratic House leadership reccgnized the matter as a problem but he said "I find difficulty in reconciling that statement by the Speaker to a press statement of July 16, 1959, attributed to the Speaker saying 'we can sit here and wait'."

Mr. SIMPSON said that one of the considerations that had prompted the committee Republican members to urge action on this important legislation is their concern that the Democratic House leadership had decided to sit and wait in taking action on this important measure in the same way "the Democratic leadership has been sitting and waiting on effective farm legislation, a suitable housing bill, and a labor bill that will protect the rights of all American citizens." He went on to say, "The Democratic leadership in the Congress seems to have effectively adjourned the Congress without the awareness of the Members."

Mr. SIMPSON said: "I presume if and when the Democratic House leadership makes its decision as to what is good for the Nation with respect to public debt management, it will permit the entire House membership to vote on legislation meeting the approval of that leadership without regard to the President's recommendation."

Mr. SIMPSON noted that the Speaker's criticism of the Federal Reserve Board was totally unwarranted and constituted a rebuke by a highly placed Government official of other Government officials who are earnestly doing their patriotic best to fulfill their responsibility as prescribed by law.

In connection with his statement Congressman SIMPSON released the text of a letter he had received from the Honorable William McChesney Martin, Chairman of the Board of Governors of the Federal Reserve System on the Democratic proposed amendments to the administration's legislative proposal

The complete text of Mr. SIMPSON'S statement follows along with the text of Mr. Martin's letter:

"TEXT OF THE STATEMENT BY THE HONORABLE RICHARD M. SIMPSON

"I sincerely regret that the Speaker of the House of Representatives has unwarrantly chosen to characterize as a political play the pledge of support from the 10 Republican members of the Committee on Ways and Means to assist in obtaining favorable House action on the administration's request for legislation to remove statutory interest rate ceilings to facilitate economical public debt management.

"It is a matter of public record that a substantial cleavage exists among House Democrats on this legislative proposal and our pledge of unanimous support by Republican committee members and the expression of expected supports from at least 140 Republican Members of the House were intended to give encouragement to the House Democratic leadership to break the existing stalemate and deal forthrightly with this important issue involving confidence in the soundness of our dollar and in the integrity of our credit.

"While neither I, nor to my knowledge any other Republican member of the Committee on Ways and Means, has received a reply from the Speaker to our letter of July 22, the Speaker apparently has said to the press that the leadership of the Congress and the Democratic members of the Committee on Ways and Means are seeking a solution to this problem. I am encouraged that the Democratic House leadership has recognized and is seeking a solution to this problem, but I find difficulty in reconciling that statement by the Speaker with a press statement of July 16, 1959, attributed to the Speaker saying 'we can sit here and wait.'

"One of the considerations that weighed persuasively with the Republican membership of the Committee on Ways and Means in urging the Speaker to end the committee bottleneck was our concern that the Democratic House leadership had adopted a 'sit and wait' policy on this important matter in the same way that the Democratic leadership has been "sitting and waiting" on effective farm legislation, a suitable housing bill, and a labor bill that will protect the rights of all American citizens. The Democratic leadership in the Congress seems to have effectively adjourned the Congress without the awareness of the Members. I presume if and when the Democratic House leadership makes its decision as to what is good for the Nation with respect to public debt management, it will permit the entire House membership to vote on legislation meeting the approval of that leadership without regard to the President's recommendation.

"The Speaker has unjustly expressed criticism of Federal Reserve authorities. This criticism is totally unwarranted and constitutes a rebuke by a highly placed Government official of other Government officials who are earnestly doing their patriotic best to fulfill their responsibility as prescribed by law. The Speaker in seeking to cast responsibility for this Democratic caused stalemate on the Federal Reserve authorities is criticizing recognized monetary authorities who are conducting themselves with impeccable propriety on this important issue. In his criticism of the Federal Reserve the Speaker seems unmindful of the virtually unanimous criticism expressed by financial writers of the amendments tentatively approved by the Democratic Majority on the Committee on Ways and Means. An example of such criticism appears in the July 13, 1959 publication of Aubrey G. Lanston & Co. Inc., who are foremost specialists in Government securities. An excerpt from that publication states the following with respect to the amendment which would require the Federal Reserve to peg Government bond prices:

"Some things, however, are clear. The management of money, credit and debt is an art the practice of which is replete with complexities. The means by which these arts are practiced very definitely are not matters in which Congress can afford to meddle whimsically or for purposes of advancing partisan objectives. The manner in which, and the methods by which Federal Reserve open market operations are conducted may not be subjected to black-and-white analyses. But, certainly, the national interest dictates that the choice of methods be left to the experts, and that the actual decisions with respect to these matters be left to the experts who are charged with the responsibility. Certainly, too, Federal Reserve officials know better than the House Ways and Means Committee what the Fed can and cannot do in the Government market if the public interest is to be served."

The Speaker in stressing what he interprets as the permissive character of the proposed amendment also seems unmindful of statements made on the House floor by Democratic House Members indicating that perhaps the amendment would be mandatory on the Federal Reserve.

On July 13, 1959, I addressed a letter to the Chairman of the Board of Governors of the Federal Reserve System, the Honorable William McChesney Martin, Jr., at the request

of several members of the Committee on Ways and Means asking the Chairman to evaluate the amendments that had been tentatively adopted by the House committee majority. Because I was uncertain as to the scheduling of subsequent activity by the committee on this legislation, I asked that Chairman Martin expedite his reply. His answer contained nothing that he had not previously brought to the attention of the committee before the Democratic majority had approved these amendments. I consider that his answer contained his earnest and patriotically expressed views on this very serious matter.

In view of the aspersions that have been cast upon the Federal Reserve authorities, I feel it only proper that the text of Chairman Martin's reply to me should be released at this time. It is appropriate that the American people should be permitted to judge whether he is acting as an obstructionist as has been alleged or instead is constructively working as a responsible Government official who is knowledgeable in monetary affairs to find a correct solution to a very grave national issue.

(There is attached the text of the letter to the Honorable RICHARD M. SIMPSON from the Honorable William McChesney Martin, Jr., Chairman, Board of Governors, Federal Reserve System).

BOARD OF GOVERNORS OF THE
FEDERAL RESERVE SYSTEM,
Washington, July 14, 1959.

The Honorable RICHARD M. SIMPSON,
House of Representatives,
Washington, D.C.

DEAR MR. SIMPSON: This response to the request contained in your letter of July 13 puts in writing the gist of the comments I made in the executive session meetings of the Ways and Means Committee on the amendments to the legislative proposals originally offered by the administration.

It is my considered judgment we are facing a serious financial situation. The limitation on interest rates is unrealistic in the light of present market quotations and denies the U.S. Treasury the tools essential to effective balanced handling of its borrowing needs. By statute the Treasury is now limited, because of the ceilings, to the issue of short-term securities which under present conditions of rising prosperity is dangerous. These short-term obligations can readily be converted into money at the option of the holder. In effect, they are a substitute for money, and thus could swell the flow of money far beyond that needed to purchase available goods and services at current price levels. The threat of a money flow out of hand has a major impact on the cost of living and places a burden on all of us.

It serves no useful purpose at the moment to argue whose fault it is that we are in our present predicament. The fact of the matter is we are in it. The committee is not being asked to vote whether interest rates should or would go up or down, but merely to grant the Treasury authority to exercise its best judgment in meeting an existing problem. We are discussing a crucial matter—the credit of the United States. Failure to deal with this could (and I was careful not to threaten or assert that it necessarily would) have the most serious implications. It was my duty to warn of this, much as I disliked the task. These are the basic facts with which we were dealing and any amendments must be considered in this light.

The amendment to retain the statutory ceilings but permit them to be disregarded if the President found the national interest so required did not seem to me to present unworkable problems. Accordingly, I did not raise objections, although I prefer the original.

The sense of the committee amendment is quite a different matter. I object to this on principle. The Open Market Committee and the Federal Reserve Board are given the responsibility under the Federal Reserve Act for regulating the money supply. If the Congress wishes to spell out the means of doing this, it should amend the Federal Reserve Act and not tack this on to a debt management bill.

Furthermore, under present conditions, I am convinced that this amendment, when stripped of all technicalities, and regardless of whether the language is permissive or mandatory, will cause many thoughtful people both at home and abroad to question the will of our Government to manage its financial affairs without recourse to the printing press. To me this is a grave matter. We are here dealing with trust and confidence which is the keystone of sound currency. Therefore, I must oppose this proposal as vigorously as possible, as I did during the hearings.

The amendment limiting the President's authority to 2 years is, in my judgment, unsound. It could be a source of embarrassment to both the next President and the then Secretary of the Treasury.

I have tried as faithfully as possible to summarize what I actually said during the hearings, and not to introduce new ideas. May I, in conclusion, thank you and all the members of the committee for the courtesy and consideration shown me and my associates throughout the meetings. I am taking the liberty of sending a copy of this letter to Chairman MILLS.

Sincerely yours,

WM. MCC. MARTIN, JR.

Mr. Speaker, the time has come when effective leadership must be brought to bear in obtaining floor consideration of this important administration request for legislation. It is no coincidence that financial writers and editorial comment have been virtually unanimous in criticizing the committee-approved amendments to this legislation. Political machinations and leadership equivocation have no appropriate place in this consideration. We are confronted with the fact of grave consequences assuredly detrimental and potentially disastrous if we do not provide the Secretary of the Treasury with the authority he must have in managing a public debt of $285 billion and in refinancing the $75 billion of Federal obligations that will mature in the next 12 months.

Mr. Speaker, as the Republican members of the Committee on Ways and Means indicated to you in our July 22 letter, the Republican administration and the Republican membership in the Congress are willing to accept the responsibility for removing the statutory ceilings on interest rate on Government securities to facilitate the economical management of the public debt. The Democratic majority in the House must accept the responsibility for unwise action or no action at all; the American people will bear the brunt of the consequences if the Democratic House leadership persists in "sitting and waiting."

There is legislation before the House, H.R. 8304, which I have introduced as ranking Republican on the Committee on Ways and Means carrying out the administration's recommendations in this area. It is urgent that the House be allowed to work its will with respect to this legislation.

Surplus Power From Bonneville for Atom Smasher

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, July 30, 1959

Mr. ENGLE. Mr. President, the eminent Senator from New Mexico [Mr. ANDERSON] who serves with distinction as chairman of the Irrigation and Reclamation Subcommittee of the Senate Interior and Insular Affairs Committee, as well as chairman of the Joint Committee on Atomic Energy, is ever alert to the needs of the West in particular and the interest of the U.S. taxpayers in general. I wish to commend him for his understanding of the water and power needs of my State and for his effective leadership in our efforts in Congress to meet these needs.

A current case in point was reported in the Washington Daily News of July 27, 1959, under the heading "Maybe Senator ANDERSON Saved Us Taxpayers a Few Millions." This has to do with the plans of the Atomic Energy Commission to build a $105 million linear electronic accelerator at Stanford University. Initially, at a capacity of 10 billion electronvolts, the accelerator would require 60,000 kilowatts of electric power; ultimately, enlarged to 45 billion electronvolts, the accelerator would, of course, require a great deal more electric power. Senator ANDERSON has pointed out that the proposed Federal transmission line intertie between the Bonneville power system of the Pacific Northwest and the Central Valley power system of California could be the means of delivering some of Bonneville's current surplus power to Stanford for the AEC installation.

I ask unanimous consent to have the news article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAYBE SENATOR ANDERSON SAVED US TAXPAYERS A FEW MILLIONS

Senator CLINTON P. ANDERSON, Democrat, of New Mexico, may have discovered a way by which the Government can save millions of dollars a year in operation of its proposed linear electron accelerator at Stanford University.

When Senator ANDERSON's Joint Committee on Atomic Energy held hearings on the accelerator, Stanford witnesses testified it would cost $15 million a year to operate, much of which would go for purchase of electric power from a private utility company.

This power cost could be quadrupled under ultimate plans for the accelerator.

But Senator ANDERSON then recalled hearings over which he presided last spring, in

his capacity as chairman of the Irrigation and Reclamation Subcommittee of the Senate Interior Committee.

These had to do with a proposal to carry surplus power from the Bonneville Dam in the Pacific Northwest to northern California.

The same private utility that wants to sell power to Stanford was negotiating with Bonneville for its surplus. Senator ANDERSON has called attention to Bonneville's surplus power and the proposal—discussed in 1952 and then abandoned—for a Government intertie line.

"If the intertie were constructed," Senator ANDERSON wrote AEC Chairman John McCone, "it could make at least some power available to Stanford at 'dump' rates below the presently quoted rates from private sources," possibly saving enough on the accelerator's operation to pay for constructing the high-voltage intertie transmission lines.

Rural Development: A Program That Works

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 29, 1959

Mr. HENDERSON. Mr. Speaker, there appeared early in June in the Christian Science Monitor the first and second in an important series of articles on the national rural development program, now going forward in some 200 counties in 30 States. Two of these pilot counties are in my congressional district in southeastern Ohio. The Monitor, which is one of the most highly respected and independent newspapers in the Nation, terms rural development "a program that works."

In view of our deep concern over the problems of the Nation's agricultural areas and the intensive search for effective, long-term solutions to these problems, this independent account of what the national rural development program has accomplished deserves the closest study. This approach, originated by the present administration, may well turn out to be one of the most significant steps taken in recent years to solve the farm problem—once and for all.

I wish to commend the Monitor's excellent review of the program to the Members of the House:

RURAL TEAMWORK SPURS FARM GAINS

(By Helen Henley)

WASHINGTON.—In many rural areas where farmers are hard pressed to earn adequate incomes, new hope is appearing.

That hope has blossomed through efforts of many citizens working together in the rural development program. This project was launched 3 years ago by Secretary of Agriculture Ezra Taft Benson, but in great degree it owes its expanding success to the cooperation of citizens in each community. If the Federal Government has supplied the basic machinery, local workers might be said to have supplied the gas.

Throughout 200 counties in 30 States, rural development projects in various stages include such things as: New market opportunities for local produce; new educational opportunities; improvement in farming practices, to yield more income; construction of new business facilities; opening of new roads; and in short, better utilization of whatever resources a community has. Although initiated to aid low-income farmers, the program is rejuvenating entire communities.

HOW PROJECTS OPERATE

The way these projects operate is indicated in a report from Park Rapids, Hubbard County, Minn., which reads:

"An invisible little pig market is having some plain-to-be-seen results here in northern Minnesota. It's invisible in this respect: There are no stockyards, no holding pens, no market-owned trucks or cattle cars. Instead, the market is a listing service for farmers who have pigs to sell. A local office keeps the list for buyers who then go out to the seller's farm to do business.

"Simple as it sounds, this market has sold some 2,000 little pigs—worth about $25,000—since it started operations in April. Farmers here call it the best thing ever to happen to the pig business in this area.

"One of the eight key rural development committees in the county—the farm management committee—developed the idea for the pig market. But they didn't rush into it blindly. They first surveyed local farms and decided from the results there would be enough volume to warrant a marketing association."

INCOME BOOSTED

Now, says the report, the 50 association members, who each pay an annual membership fee of $2, have received $1 to $2 per head above the going price "which has added about $2,500 to the local income."

Other developments in Hubbard County, Minn., include "a vegetable market operation at Nevis during the past two summers * * * an effective antilitter campaign in the tourist country. * * * Work is underway on development of a 5,000-acre bog area into a wildlife refuge and public hunting ground. And some intensive studies have been made of other local conditions, including industrial and small business credit needs, youth camp proposals, and needs for scholarship programs."

Down in Berkley County, S.C., where lack of proper drainage and flooding of roads perennially caused problems, a whole area was lifted out of the muck when a new weatherproofed road was built, with culverts and proper drainage structures throughout the region. Everybody helped with this—the county agent, special rural development program workers, the Soil Conservation Service, the South Carolina Highway Department, and farmers who granted the necessary rights-of-way.

WASHOUTS AVERTED

"Farmers can get into the fields earlier this spring, and save crops formerly washed out," commented the Southern Planter.

A new produce market in Bertie County, N.C., locally financed and managed, handled during its first year $170,000 worth of watermelons and yams, and now has extended its operations to include other produce. To finance this market, local business leaders formed a corporation and sold stock, while specialists of North Carolina State College and extension agents helped with technical aspects.

In a statement to Congress March 25, 1959, Representative WILLIAM H. NATCHER, Democrat, of Kentucky, said of his own district:

"The initial impact of the rural development program has been partly responsible for many improvements in Butler County, Ky. It has aided in many accomplishments, namely, a new health unit, an increase in local employment, erection of three modern buildings on the main street of Morgantown, the county seat, a new post office building to be erected in the near future, construction of new homes and business houses, improvement of roads and schools, a building erected for use as a meeting place for the rural development group, improvements generally in living conditions on the farms, and better acceptance and use of farm programs offered throughout the county, as well as overall progress in the city of Morgantown."

But the most important benefit of all, perhaps, was pointed out by the Southern Planter: "* * * the program has succeeded in focusing attention on low-income rural families as people needing jobs, or more farm know-how, or better educational opportunities, rather than as economic units producing 'X' number of bales or bushels."

RURAL DEVELOPMENTS A PROGRAM THAT WORKS

(By Helen Henley)

WASHINGTON.—Squabbles on Capitol Hill about farm programs that don't work have largely drowned out some good news about a farm program that does work. The plan which, in a brief 3 years of pilot operation, has begun to show sturdy signs of its effectiveness is not, strictly speaking, exclusively a farm program, though it was originally inspired by the needs of marginal farmers. Known as the rural development program, the project helps entire rural areas to solve their problems largely through local efforts, though certain forms of Federal aid are available.

A workshop meeting at Weston, W. Va., in mid-May spotlighted some amazingly substantial gains made through the rural development program in its first 3 years.

Some of the farmers most needing help in this age of technology are counted among some 2,700,000 small-scale, part-time and residential farmers who, although they make up about 56 percent of the farm community, produce only about 10 percent of the farm products marketed, Secretary of Agriculture Ezra Taft Benson told the workshop meeting.

From the standpoint of economics these small producers might be considered expendable. But "low income rural areas are rich in human resources," Under Secretary of Agriculture True D. Morse, Chairman, Committee for Rural Development Program, declared in a workshop address.

INDIVIDUAL HELP OFFERED

It was to channel these human resources into their most effective use that Secretary Benson, with President Eisenhower's blessing and a small appropriation from Congress, launched the rural development program 3 years ago to help rural families make whatever adjustment their situation requires for their own well-being.

This might mean staying on their farms and finding jobs in industry nearby to supplement their income. It might mean learning better farming practices to increase their income. Or it might require moving away from the farm entirely. In any case, the farmer makes his own decision concerning his future, and can call on both Federal and local agencies in the rural development program to help him.

The pressing need for such a program had first been clearly defined in a year's study of rural areas which was summed up in a report by Secretary Benson to Congress in April 1955, entitled "Development of Agriculture's Human Resources." This documented the plight of almost 3 million small farmers who receive no benefit whatsoever from the Nation's expensive price-support programs.

The original 20 counties selected as pilot counties for the rural development program have been expanded now to include 200 counties in 30 States and Puerto Rico, with activities rapidly spreading even beyond these.

More than 350 projects are now in various stages of development, including such things as new industries to supply jobs, conserva-

tion and land drainage to improve farming practices and income, better marketing procedures to facilitate sale of produce; added educational and training opportunities to prepare young people for off-the-farm careers.

Local leaders are, in short, getting together to make the most of their regional resources, to keep people on their own farms when that is desirable, and to improve their own communities.

"The rural development program is presently emerging from the pilot or demonstration phase and becoming a permanent, long-term approach to the improvement of opportunities in rural areas," said Secretary Benson at the workshop.

The U.S. Department of Agriculture is making grants to States to pay the salaries of agents devoting their time to the RDP, and these State-Federal coordinators help local groups to "iron out the kinks." But each community tackles its problems in its own way, sometimes with a whole trading area working together rather than just a county. Bankers, businessmen, ministers, women's clubs, farm organizations, extension workers—all interested citizens—join in the effort.

APPROACH OUTLINED

Mr. MORSE outlined the approach in this way:

"States have formed rural, resource, or area development committees—with broad representation. Counties or areas have development committees—with project or subcommittees as needed.

"There is a national committee at the under secretary of sub-Cabinet level. This committee for rural development program represents Department of the Interior; Department of Agriculture; Department of Commerce; Department of Labor; Department of Health, Education, and Welfare; Small Business Administration; Council of Economic Advisers. Dr. Harry J. Reed, former dean of agriculture at Purdue University, is the coordinator."

The Small Business Administration has been especially helpful in making loans to start or expand regional industry, but many projects have been locally financed.

What such coordinated efforts can mean to an entire region was summed up in a report from the American Bankers Association which, commenting on rapid industrial expansion which has increased off-the-farm employment opportunities and has tended to insure a balanced economy between agriculture and industry stated:

"A U.S. Chamber of Commerce report on the relationship between industrial growth and general community development measures the effect of new industrial jobs to a community. The report indicates that 100 new factory workers meant the following in their communities:

"Two hundred ninety-six more people; 112 more households; 51 more school children; $590,000 more personal income per year; $270,000 more bank deposits; 107 more passenger cars registered; 174 more workers employed; 4 more retail establishments; $300,000 more retail sales per year; 31 fewer agriculture workers."

The rural development program attacks only one aspect of the total farm problem—that of rural families with substandard income or living conditions. It is still a small-scale operation, and has not yet reached many areas needing help. But step by step it appears to be proving effective and to be pointing the way toward solution of some of the farm problems weighing most heavily on the conscience of a nation.

Some specific rural development program projects now underway in various States will be described in succeeding articles.

Hope for the Future

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Thursday, July 30, 1959

Mr. CARLSON. Mr. President, Dr. Norman Vincent Peale, one of our outstanding national religious leaders and clergymen, wrote an article entitled "Hope for the Future," under the column "Confident Living," which appeared in the New York Herald Tribune on Sunday, July 26.

Dr. Peale in this article tells of a most interesting dinner party, at which there was not just the usual fellowship, but a deep sense of the presence of God among those in attendance.

It is an excellent article, which discusses in general the program of the International Council for Christian Leadership and the great affect this organization can have on the future welfare of the nations of the world.

I ask unanimous consent that the article be made a part of these remarks and inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONFIDENT LIVING

(By Dr. Norman Vincent Peale)

HOPE FOR THE FUTURE

It was a gay and exciting dinner party. The food was superb, the conversation brilliant, the laughter uninhibited * * * then an unforgettable climax. Suddenly our hostess rose and quietly asked me to offer a prayer. The fellowship deepened. The sense of God's presence was definite. A strangely moving unity prevailed as we all stood around the table.

This happened in a gracious home on the Rue Faubert, Paris, only a stone's throw from the Invalides and Tomb of Napoleon. Our hostess, Anne Marie Christine la Contesse de Gontaut-Biron, petite and gentle, was one of the most inspiring personalities of the French Resistance. Fifty times she crossed the Swiss border incognito to secure funds for starving refugees in Paris.

She was eventually seized by the Nazis and interned for 2 years at Ravensbruck, the infamous concentration camp. Only 15 out of 500 people in the last convoy to Ravensbruck returned alive; and the contesse and her daughter were among the fortunate 15 who came through that harrowing experience.

A fascinating group was gathered about her dinner table. Opposite me sat Minister of Justice Edmond Michelet. Second ranking minister to Debre, Michelet is very close to De Gaulle and is regarded by many as a potential premier. He, too, was a leader in the resistance and suffered at Dachau. Deputy Pierre de Chevigny, a brilliant conversationalist in French and English, and other government leaders were also present. Two of the most gracious ladies of Europe lent their charm to the party, the Contesse de Leusse, international hostess, and Mme. Lansberger, Polish noblewoman.

All were ardent De Gaullists. At mention of the general's name an almost reverential attitude seemed evident. They were deeply appreciative when we voiced our admiration of the French leader. "He is like Lincoln to us," one said.

This dinner party was much more than a social affair. It was part of a reception given by the International Council for Christian Leadership. This organization is headed by Rev. Dr. Abraham Vereide, secretary general; Rev. Wallace Haines is president on the Continent, and Senator FRANK CARLSON here. Its members include some of the most distinguished political, business, and professional leaders of many countries—both Catholic and Protestant; its objective is to assure a deeper penetration of Christian ideals and practices into international affairs as well as in personal living. The strong Christian "cells" developed by I.C.L. are doing much toward creating not only better understanding among free peoples, but deeper unity as well.

The depth of spiritual fellowship evidenced in this Paris meeting was one of the most impressive of my entire experience. It could actually be said that the Christian love and faith felt that evening surmounted all differences of language, nationality, and those between Protestant and Catholic. It was a group where the main desire was to follow Christ and make Him uppermost in all of life.

The amazing strength of the spiritual movement abroad is not fully realized on our side of the Atlantic, and it is most encouraging to see that all over Europe people of great influence are being drawn into effective groups to study how Christianity may be implemented practically in our life today.

A day later, in Rome, I saw further evidence of the upthrust of spiritual unity. I visited the dynamic spiritual and educational leader, Father Felix A. Morlion, president of the International University of Social Studies Pro-Deo (under God). Pro-Deo's program is based on the belief that freedom and free enterprise can best assure economic and social progress and allow unlimited development of human possibilities.

This university is an amazing experiment in interfaith activity. Its board of distinguished laymen consists of 12 Catholics, 12 Protestants, and 6 Jews. The student body numbers 1,600 students from many countries and is composed of Moslems, Hindus, Buddhists, Jews, and Christians.

Father Morlion, who has the blessing of Pope John XXIII, is training leaders "under God" who will have the dedication and know-how to make religion and freedom the guiding forces of the future in politics, business, and personal living.

So, take heart, reader, really take heart. God is on the move. The economic and political life of the free world is truly alive under God.

Objective of Long-Range Economic International Relations

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by George C. McGhee before the International Economic Policy Association's National Conference on the U.S. Economy and International Relations, Washington, D.C., June 30, 1959:

OBJECTIVES OF LONG-RANGE ECONOMIC INTERNATIONAL RELATIONS

It is a great pleasure indeed to appear before this National Conference of the International Economic Policy Association, which has considered in its meetings today "The U.S. Economy and International Relations." I have followed with interest your program. The discussion on Government aid programs are of particular interest because of my work as a member of the President's Special Committee To Study the U.S. Military Assistance Program (and related economic programs)—the so-called Draper committee. Although it is difficult in the limited time allowed to cover such a broad field, I will attempt to emphasize some of the considerations which have been a part of our studies.

In our first interim report issued March 17, 1959, the Committee confirmed that "The Communist military threat is greater than ever. The Communist economic and political efforts are expanding."

We stated as the issue "whether we intend to seek survival in isolation—state of siege—as the world continues to shrink." And we said further that "the only alternative we can see to the interdependent allied free world, strengthened by our aid where needed, would be the Fortress America concept—taking our first stand in the last ditch."

The Committee confirmed its confidence that the mutual security program both in its military and its economic aspects is a sound concept and concluded that "the mutual security program is now and will remain an essential tool of foreign policy."

The Committee, in particular, endorsed the amounts of economic aid requested by the administration for fiscal year 1960. It further stated that "As an order of magnitude, we believe that loans for economic development under the mutual security program will probably be needed at the rate of at least $1 billion a year by fiscal year 1961." This compares with a request by the administration for $700 million for fiscal year 1960.

Before proceeding, let me just summarize for a moment where I believe we now stand.

The dominant fact of life in the world since the end of World War II has been the clear intention of the Soviet Union to extend its political domination over the entire world. This threat has, and rightly so, constituted the basis for most of the actions and reactions of the governments of the free world throughout this period. Unfortunately, since the threat not only continues but is increasing, we and the other free world nations must continue to give to it a large measure of our attention.

Our preoccupation with the Russian threat, however, has served to obscure another world problem of the first order of magnitude. This problem arises out of the historic transition of a large part of the world from the colonial era to one of free and independent nations. The colonial system, which made important contributions in its day, did, however, mask from the attention of the world the great disparity in economic opportunities existing among the peoples of the world. It muted the voice of those who would have drawn this problem to the world's attention.

We and other free world nations have, however, in recent years, become increasingly aware of the problem and of its magnitude. We have already made an important contribution in assisting the underdeveloped countries in their drive for economic progress. We have perhaps not even yet, however, grasped the full scope and significance of the problem, the tremendous difficulties to be faced, and the urgent necessity for enlisting the support of other free world nations who can contribute if satisfactory progress is to be made. Under Secretary of State Dillon recently said in his speech at Harvard, that this is a problem we will face for the next 20 to 30, or perhaps 50 years.

Inequality of conditions and opportunities have always, and probably will continue to exist in the world. What we can and must do, if we expect the continuation of a group of free world nations in which we can achieve our own national objectives, is to assure the people of the less developed countries that we are conscious of their problems and will make an effort to help them, perhaps not as much as they would like, but an effort in some way commensurate with our ability.

One problem in this regard, however, is that the desire for progress on the part of the underdeveloped countries is more universal than the wisdom to develop wise plans, the determination to carry them out, and the available material resources upon which progress can be based. We are only in the beginning stages of understanding the dimensions of the problem, much less the means of overcoming it.

Unfortunately, there is no example of an underdeveloped country which has, as a result of outside assistance made an important economic breakthrough or shown sustained accelerated development which makes it possible for that country to move forward without foreign aid. The future will probably reveal that the achievement of this breakthrough will in most cases take much longer than we have envisaged. In many countries, because of climate, population growth, lack of resources, unstable governments, and many other factors, there may be no satisfactory progress for a very long period of time. In other countries progress made as a result of forced or artificial means may turn out to be illusory, and only after disappointing setbacks and readjustments will sustained progress be made.

But why, one might ask, do we provide assistance to these countries? Why are we willing to make this great effort? The answer to me is very clear. It is necessary for our continued growth as a nation, even possibly our survival.

The United States and the other developed nations of the free world cannot continue to enjoy their present rate of economic growth and prosperity in isolation. As an example: the United States is already dependent on foreign sources for more than 80 percent of 11 important raw materials (nickel, platinum, antimony, bauxite, natural rubber, tin, chrome, industrial diamonds, manganese, cobalt, and abaca) and to a lesser extent of numerous others; and this dependence will increase in the years to come. At the same time, export markets account for one-third to one-half of total markets for four of our major agricultural crops (cotton, rice, wheat, and tobacco), and are highly significant for many industrial products. Our future prosperity will increasingly depend on such markets. The free nations of Europe and Japan are dependent to an even greater degree upon the raw materials and markets of the underdeveloped countries. We need the rest of the free world as it needs us.

The recent internal economic achievements of Russia, and more especially those reported by China, have brought the problem of the underdeveloped countries sharply into focus. China and Russia are pursuing a totalitarian and brutal method of achieving rapid economic growth, at a tragically high cost in the loss of human life and freedom. Since these costs are not everywhere clearly understood, the Communist system seems to many to offer an alternative to the present slower rate of progress in the underdeveloped countries of the free world.

In the underdeveloped countries there is urgent need to move toward the achievement of a more acceptable rate of economic progress in order to decrease the possibility of Communist political and economic domination. Defection of the underdeveloped world or any significant segment of it to the Communist bloc would have seriously damaging consequences for the United States and the rest of the free world.

Moreover, there is a definite moral responsibility to do what we can, along with other countries who can help, toward achieving this end. Not to do so would be contrary to our national tradition. Only if we continue to do our part in this general international effort can we fully realize the ideals and purposes which should inspire us as a nation as we play our proper role in the world of the future.

I would, in conclusion, just like to summarize a few of the principal factors that should be kept in mind in connection with our programs of economic assistance.

1. Provision must be made for longer range planning. We must recognize that in most countries economic development is a long-range problem. We can no longer afford the luxury of a year-by-year piecemeal approach to the problem. Longer range planning will require both legislative and organizational changes.

2. The countries being aided must take the initiative in the planning and execution of their own development programs. They must take stronger measures to solve their own problems, and must work toward internal reforms along lines that have made development possible in other countries. Our aid programs must emphasize the assumption of this responsibility by the countries receiving aid.

3. The distribution of resources in the world is quite different from that after World War I, when the United States had to bear the whole burden. The Western European countries and Japan, together, have a capacity of assisting the underdeveloped countries roughly comparable to our own. They are already providing assistance on a large scale. In 1958 they extended through loans and grants more than $700 million for economic development. We must, wherever feasible, approach the problems of the underdeveloped areas on a multilateral basis to assure participation by those willing to help. We should seek no monopoly in aid to others.

4. An increased role must be played by free enterprise. The resources and skills of our free enterprise system are one of our most valuable national assets. The Russians are using their total national resources in their efforts abroad. We are not competing to the maximum extent that we can unless we use all of our resources.

The report "Expanding Private Investment for Economic Growth," prepared by Mr Ralph I. Straus, and the report by the Committee on World Economic Practices, of which Mr. Harold Boeschenstein was Chairman, are both excellent and point in the direction we should take. We can literally bind the world to us in mutual self-interest through the bonds of free and expanding trade. If we are disturbed by the $1 billion of economic and military credits extended by Russia in 1958, even in comparison with some $4,386,000 in total assistance extended by the U.S. Government in fiscal year 1959, one is heartened by the fact that Sino-Soviet trade with the underdeveloped countries was only 3.5 percent of the trade between those areas and the rest of the free world ($1.8 billion versus $51 billion). This great volume of trade serves the free world interest just as our aid programs do.

There are even further steps that our Government can take to mobilize the resources of free enterprise in this country in the task of assisting the underdeveloped countries. I anticipate that the Draper committee will have some important recommendations on this subject in its final report.

5. If we are to make the most effective use of our total resources, both government and private, we must further perfect our government organization through which we

extend aid. The diffusion of responsibility in the foreign aid field among the various departments and agencies makes it difficult to marshal our available resources for assisting particular countries into an integrated and well balanced program. This also is a necessity to which the Draper committee is giving careful attention.

These are merely highlights—there is much else to be said. The important thing, however, is a recognition on our part that the United States is in this affair on a large scale and for a long period of time. We have no acceptable alternative. No matter what the scale of effort we allocate to the task we must make that effort the best the American people and government can do and then, and only then, will these efforts be successful.

Thank you very much.

Our China Policy Needs Revision

EXTENSION OF REMARKS
OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 30, 1959

Mr. ENGLE. Mr. President, on May 21 I addressed the Senate on the need for a revision of our China policy. I have been gratified by the response to that speech from my own State of California and from other sections of the country. I ask unanimous consent to have printed in the Appendix of the RECORD some of the editorial comments on my proposals for a new look at our China policy.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Sacramento (Calif.) Bee, June 7, 1959]

CLAIR ENGLE STRIKES KEEN BLOW AT U.S. CHINA POLICY

Any criticism, even constructive, of this Nation's Red China policy has been treated much as one might approach a carload of nitroglycerin jolting over the Burma Road.

It is to the singular credit of U.S. Senator CLAIR ENGLE, of California, that in a Senate floor speech he has brought our China policy out of the realm of fantasy and untouchability into that of rationality.

In what may be the first frank official challenge to the Eisenhower administration's Red China policy in more than 6 years, ENGLE boldly stepped over that nightmare threshhold where any advocacy of a possible change in such policy virtually has been equated with treason.

Papier mache illusions have controlled the State Department's Red China policy—the illusion Red China was on the verge of collapse, that, as President Dwight D. Eisenhower has maintained, any forthright dealing with Red China would cause the rest of Asia to tumble into the Communist camp like "falling dominoes," that Chiang Kai-shek might some day return to the mainland from Formosa, that any lifting of the present news blackout between Peiping and Washington would give Red China such a buildup that millions of Asiatics would turn to Communism, that China was ever ours to lose and that former Secretary of State Dean Acheson's policies turned mainland China over to communism.

Such illusions are a backwash of the late Senator Joseph R. McCarthy's terror that paralyzed the Nation and the State Department. They have also been cultivated by that loose amalgam of groups called the China lobby. Some members of this lobby are sincere in trying to get Chiang's forces back to the mainland. Some are wealthy Chinese who want to get back to resume their lush pickings at the expense of the people.

ENGLE, while supporting all our defenses in Asia, called for an end to the news blackout, for making it clear the United States would support no military adventure from Formosa against Red China, that at some stage in our return to reality, we negotiate with Peiping at a level higher than the present ambassadorial talks in Warsaw and that we put trade with Red China on the same basis as that with the Soviet Union.

Even the late former Secretary of State John Foster Dulles, while indignations were high against Red China because of the Korean war, wrote in his book "War or Peace," "all nations should be members of the United Nations" without appraising whether they were good or bad. ENGLE merits great credit for his pioneering for a return to rationality in discussing the Nation's Red China policy.

[From the St. Louis Post-Dispatch, June 7, 1959]

A NEW DIRECTION FOR CHINA POLICY—CALIFORNIA SENATOR URGES A BEGINNING ON NEGOTIATIONS WITH MAO

(By CLAIR ENGLE (Democrat) in a Senate speech)

If we recognize, as I think we should, that our present Chinese policy is not adequate, we should be prepared to negotiate for some specific changes. Our policy, and what we propose, should be flexible, depending to some degree upon how far the Red Chinese are willing to make concessions in our interest in the Far East.

These steps should be taken one at a time and we should not be in too big a hurry about it. But there are certain areas in which we should be willing to negotiate and talk with the Red Chinese with a view to concessions to be made on their side.

As a start, we should be willing to negotiate the entrance of Chinese correspondents to the United States on a basis of reciprocity and equality with United States correspondents admitted to Red China. We should be willing to place the issuance of visas to the Chinese on the same basis and under the same controls as now apply to the citizens of the Soviet Union provided that the Chinese are willing to admit American correspondents to the mainland of China.

Second, we should be willing to discuss with Red China the possibility of placing our trade with Red China on the same basis as our trade with the Soviet Union. Why should they be different? There are many concessions with reference to trade in the Far East that might be advantageous to us and our friends if this kind of an arrangement is carefully negotiated.

Third, we should make it plain that although we intend to maintain our treaty obligations with reference to Formosa, we have no intention of supporting military adventures against the mainland of China—with its consequent danger of setting off a major war. This kind of discussion could be the basis of relaxing the military tensions in the Far East.

Fourth, we should assume the initiative in placing the defense of Formosa on a broader international base than it is at present and lay the foundation for the long-range status of Formosa.

Time is running out. Both Chiang Kai-shek and his soldiers are growing older and sooner or later we have to face up to a new status for Formosa. Why should we not place the matter squarely before the United Nations, offer to refrain from participation in the discussions if the other interested parties in the Far East stay out also, and ask a committee of the United Nations comprised of Asians, or on which Asians are predominantly represented, to come forth with some positive suggestions?

Fifth, we should consider the possibility at some stage during these proceedings, especially if the Mao government shows any willingness to meet us halfway, to negotiate with the Mao government on issues of substance at a level higher than the present ambassadorial talks in Warsaw. This, it is true, would lead us nearer to practical recognition of the Mao government, but it is still one or two steps removed.

Finally, all these negotiations throughout should be on a quid pro quo basis, and we should make it clear that our determined aim is to halt any Communist aggression in the Far East. We should give substance to this determination by continuing to strengthen military and economic defenses, but at the same time we should permit the countries of Asia to participate with us in progress made in economic and cultural relations with China rather than follow our past practice of penalizing and frowning upon such efforts.

This is not an easy program to undertake. It proceeds from the assumption that our present policy is getting us nowhere and that we ought to try new means and new methods. It presupposes the active and good faith cooperation of the Red Chinese themselves in a step-by-step exploration in each of the separate areas I have mentioned. It will take time and patience but it can be done and eventually the necessity of doing it has to be faced, and so let us face it now.

The challenge to our foreign policy in the next decade is to prevent the total marriage of China and the Soviet Union. The resulting economic, political, and military colossus would include nearly one-third of the world's population. Stretching in one unbroken, tightly controlled Communist federation from Berlin to Canton, it offers a chilling prospect.

Some people think that has already occurred, but I do not agree. I think there are basic ideological frictions at the present time. China is in no sense a satellite of Soviet Russia, as are Hungary, Poland, Czechoslovakia, Bulgaria, and Rumania. China is big enough and important enough to stand alone, and the Chinese leaders know that. Our policy should move in the direction of preventing a complete dependence of Red China on Soviet Russia and a total marriage of the two on the basis of the Chinese necessity. Our present policy does not move in that direction. For those reasons, I raise these questions and make these suggestions in the hope that we can get started now with a new and more vigorous approach to a policy that will move in the right direction.

[From the Riverside (Calif.) Press-Enterprise, June 14, 1959]

CLAIR ENGLE ON OUR CHINA POLICY

A recent Senate speech by CLAIR ENGLE did not receive nearly the attention his subject or his comment deserved.

"If we recognize," Senator ENGLE said, "as I think we should, that our present Chinese policy is not adequate, we should be prepared to negotiate for some specific changes. Our policy, and what we propose should be flexible, depending to some degree upon how far the Red Chinese are willing to make concessions in our interest in the Far East."

California's junior Senator wants first of all for the State Department to negotiate an exchange of news correspondents with Red China. Greater effort in this regard is being made by the Department under Secretary Herter than under his predecessor.

Second, he believes "we should be willing to discuss with Red China the possibility of placing our trade with Red China on the same basis as our trade with the Soviet Union."

Third, "we should make it plain that although we intend to maintain our treaty obligations with reference to Formosa, we have no intention of supporting military adventures against the mainland of China."

Fourth, "we should assume the initiative in placing the defense of Formosa on a broader international base than it is at present and lay the foundation for the long-range status of Formosa."

Fifth, "we should consider the possibility at some stage during these proceedings, especially if the Mao Government shows any willingness to meet us halfway, to negotiate with the Mao Government on issues of substance at a level higher than the present ambassadorial talks in Warsaw."

Sixth, "all these negotiations throughout should be on a quid pro quo basis, and we should make it clear that our determined aim is to halt any Communist aggression in the Far East."

Much of this many Americans will find unpalatable, at least upon first consideration. Too many of us are in a rut on what little thinking we do on Communist China. Across the page today Marquis Childs discusses one of the men most responsible for the staleness of our China policy. Given Walter Robertson's dedication to duty, his retirement, now imminent, should signal a reevaluation of the policy for which he has been so much responsible.

Senator ENGLE, among others, has provided food for thought the palatability of which increases when its realism is given its due regard.

[From the Redding Record-Searchlight, June 19, 1959]

ENGLE PROPOSES A NEW LOOK

(From the Milwaukee Journal)

In the days when former Senator Knowland, Republican, of California, held sway, there was little talk about our policy toward Communist China in Congress, except calls for stiffening it. The China lobby (Nationalist) rode high.

Now the man who replaced Knowland, Senator CLAIR ENGLE, Democrat, of California, has demanded a new look at our China policy—with the aim of putting some sense into it. He is not advocating recognition, or Communist China's admission to the United Nations. He admits that "conditions of hostility" prevail still. But he doesn't see much sense in treating Communist China so much differently than we treat other Red countries.

He would admit Chinese Communist newsmen to this country on the same basis that we admit Russian newsmen, and open the way for our own newsmen to go to the China mainland. The total embargo on trade with Communist China makes no sense to him. Why not permit it on the same basis as we permit trade with Russia? Truth is, ENGLE said, that China can get what it wants of most of our goods through middlemen.

Why not make it perfectly clear that we do not intend to permit—or to help—Chiang Kai-shek's Nationalist forces to attack the mainland? Why not end the pretense that Communist China doesn't exist, and seek high level talks on the differences between us—in particular talks aimed at the release of Americans held in China? Such talks, ENGLE believes, should be on higher than the present ambassadorial level.

ENGLE has at least opened the door toward realistic discussion of our China policy—something that has been practically taboo in official Washington.

[From the Modesto (Calif.) Bee, July 20, 1959]

CHINA POLICY NEEDS DISCUSSION

(From the St. Louis Post-Dispatch)

On the Senate floor recently Senators HUMPHREY, of Minnesota, and GORE, of Tennessee, talked at some length on a subject that only a few years back would have been impossible to mention without the risk of a major controversy. What they discussed was Communist China and whether it would be necessary to include it in a proposed system of control stations set up throughout the world in connection with possible agreement to stop nuclear weapons tests.

The unusual aspect of the dialogue was not the ideas advanced by either of the participants, but the fact that no McCarthy and no Knowland arose to denounce the very suggestion that the United States may have to negotiate with Peiping on this issue. The inclusion of Red China has not been mentioned publicly in the American-British-Russian test bar negotiations at Geneva.

This is not the first time that the subject has come up in the Senate and, of course, it will not be the last. But it is encouraging that there is increasing readiness to discuss in this country the relationship of Red China with the rest of the world. What the policy of the United States should be toward the 600 million Chinese living under communism is a matter for argument. There can be no valid argument against public discussion. In what other way can a correct policy be formulated?

Senator CLAIR ENGLE, Democrat, of California, urging that a start be made on negotiations with the Red Chinese, proposes discussions on the reciprocal admission of correspondents, trade, Formosa policy, and other issues of substance. The authorship of these proposals is interesting. Last November ENGLE, certainly no wild-eyed radical, was elected to the Senate seat vacated by William F. Knowland. Knowland was the Senate's most ardent supporter of the Chiang Kai-shek Nationalist Government on Formosa and a man to whom talk of possible dealings with the Chinese Communists was anathema.

Anyone who views the last few years of United States China policy objectively can note a slow but inexorable shift dictated by the practical realities of the situation. It was less than 10 years ago that Chiang fled from the mainland to Formosa, an event that was followed shortly by the rise of Senator McCarthy, of Wisconsin, and the degradation of diplomats whom McCarthy and his followers held responsible for the "loss" of China to Mao Tse-tung.

The gradual change in attitude toward Red China is dictated by awareness of the fact that the regime will not go away because we do not look at it. China unquestionably is driving ahead, even though at a cost of great human suffering. The workers have been told they will be expected to raise industrial and agricultural production this year 40 percent above 1958, the year of the "great leap forward," Lord Boyd Orr, president of the British Council for the Promotion of International Trade, who visited China recently, has forecast that China will become the world's most powerful nation in 30 years.

The fact should not be overlooked, of course, that the U.S. change in attitude toward discussing Chinese problems has not been accompanied by any discernible alteration in the Chinese attitude toward us. It remains hard and uncompromising.

That is no reason, however, why there should not be the widest discussion, in Congress, in the executive branch, and among the people, of what we are going to do about it. The time is most certainly coming when major decisions will have to be made on United States and Western policies toward Red China. It is essential that the people understand the alternatives and be in a position to act in their own best interests.

EDWARD P. MORGAN AND THE NEWS, MAY 22, 1959

Time has a way of changing all things. A few years ago it would have been virtual political suicide to challenge publicly the administration's China policy. Short months, even weeks, ago it was not a subject of any intensive discussion on Capitol Hill. But yesterday in Congress, U.S. policy toward Communist China was the target of an exhaustive, carefully reasoned attack. Current historians with a taste for the paradox may savor the fact that the attack was mounted by the freshman Senator from California, CLAIRE ENGLE, a Democrat, the very man who supplanted in the Senate the loudest, most ox-stubborn defender of that policy, William F. Knowland, once unflatteringly called the Senator from Formosa.

ENGLE'S criticism will not be popular. It won't cause any immediate change. He recognized himself that he probably would be misunderstood, misinterpreted and strenuously criticized. But with no little political courage he observed that "we have to start somewhere." His most devastating thrust against the administration attempt to seal off the Peiping regime in a kind of Never Never land was his substantial argument that it had failed, all but utterly. During the past decade, he said, we have not prevented the Mao government from fastening its control over the mainland. We have not been able to influence or affect Peiping's gargantuan efforts for economic change. And we have been unsuccessful in bringing about any kind of split between China and the Soviet Union.

"The challenge to our foreign policy in the next decade," Senator ENGLE said, "is to prevent the total marriage of China and the Soviet Union. The resulting economic, political, and military colossums would include nearly one-third of the world's population. Stretching in one unbroken, tightly controlled federation from Berlin to Canton, it offers a chilling prospect."

ENGLE did not hold with the view that this union already had occurred. As a matter of fact, many other observers believe that the pressures and frictions between Moscow and Peiping as China's population swells to a billion by the end of the century will profoundly influence history yet to be made.

Evidence continues to accumulate of the bursting activity of building and reforms in China. Under cruelly oppressive measures or not, the people are busy with massive projects, dams, railways, housing, government building. A Canadian scientist recently brought back color photographs he had taken on a long journey through the interior of China. They were still pictures but they showed scenes of quivering movement almost everywhere he went.

This does not mean a Marxist millenium is infallibly in the making. There are great problems. Britain's Boyd-Orr, former head of the United Nations' Food and Agriculture Organization, said after his latest trip to Communist China he thought they were licking food shortages—considered by some to be the key to success or failure of the Peiping regime. ENGLE doubts this. If they do fail to raise enough food to feed the burgeoning population he believes they must do one of three things, get it from Russia, trade with us or push farther into Southeast Asia. He thinks the third the most logical alternative. How do we meet that threat? Certainly not with troops. We must, he concedes, help Asians maintain their territorial

and political integrity against such Communist expansion but on the critical issue of food he sees some possible bargaining room for the West with the Chinese leadership.

At least we must recognize the failure of our rigid policy to date and search for better ones. ENGLE has no patented package. He opposes recognition or a U.N. seat for Peiping now. He realizes we are committed to the protection of Formosa—but certainly not to any reconquest of the mainland by Chiang Kai-shek. Senator ENGLE's main contribution has been in raising the China issue, thoughtfully, dispassionately in public. It is one of the most urgent issues extant.

The State Department's blessing to two such worldly citizens as Vincent Sheean and Averell Harriman in their efforts to get to China is encouraging, if fragmentary, evidence that it is unbending. Peiping itself may not unbend to these travelers. Whether it does or not, the issue of China is there to be grappled with. And it won't go away.

The D.C. General Hospital in Nation's Capital Shows That a City Hospital Is the Ideal Institution for Development of Medical Knowledge and Education

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. McDOWELL. Mr. Speaker, a city hospital is the ideal institution for the development of medical knowledge and the enhancement of medical education because no other institution has either the great numbers or variety of clinical material and pathology. In addition, patients with challenging problems can be studied intensively by physicians. Those physicians attracted to a city hospital environment are primarily interested in teaching and research, and the stimulus provided by concomitant medical education makes it imperative that each patient be worked up completely and his disease processes thoroughly understood.

Because of the tremendous interest in teaching and research in a city hospital, the standards of medical care provided the indigent patients are probably much better than those received by the middle-income group and even the wealthy; indigent patients not only have the benefit of being treated by the most outstanding physicians of the community attracted to the hospital, but also receive the latest and most advanced types of medical care because of research which is conducted. As a result of the above considerations, for many years the contributions of city hospitals to medical research and education have been tremendous, and they have played a leading role in providing our citizens, rich or poor, with the highest standards of medical care available anywhere in the world.

Although there have been many significant contributions to medical knowledge from the District of Columbia General Hospital, and many outstanding physicians have worked at this institution, there has never been any formal support for research activities. On the contrary, certain Members of Congress have directed their attention to discouraging research and have questioned the utilization of space at the hospital for such purposes, even making incriminating implications regarding the financing of research projects at the hospital. Money has never been requested from Congress to support research at the hospital because there have never been sufficient appropriations for even the maintenance of decent standards of patient care, and the money obtained through outside sources has been used not only for research, but also to supplement the diagnostic and therapeutic facilities necessary but lacking because of the insufficient appropriations.

It should be clearly evident that an institution so necessary for patient care and teaching must encourage research in order to function effectively, if only to keep abreast of the rapid advances in medicine. Since no appropriation has been available to provide equipment or personnel necessary to introduce modern diagnostic and therapeutic facilities, the District of Columbia has relied completely upon the tremendous interest of the individual medical officers responsible for the operation of the various hospital services. The use of the artificial heart which permits cardiovascular surgery for the large number of patients with congenital heart disease has only been possible through the research efforts of the medical officers and financial assistance from research grants. Likewise, refrigeration techniques required in certain surgical procedures have also been introduced because of private incentive. The pulmonary function tests, radioisotopes, virus studies, and many others indicated by the enclosed publication list from the hospital, have been made possible only under similar circumstances.

There is obviously a great need for the initiation of a program which will support research at the city hospital of the Nation's capital and which receives encouragement and support from our legislators.

The university hospitals of the District of Columbia, including Georgetown and George Washington University Hospitals, are becoming more and more dependent, not only for their educational programs, but also for research opportunities, upon the city institution. The high cost of medical care has made it exceedingly difficult for the university hospitals to utilize or reserve beds for indigent patients for teaching and research purposes. The tremendous costs of space also make it prohibitive to establish research laboratories within the university hospital. It becomes increasingly apparent, therefore, that the entire future of medical education in this city is dependent upon increasing the opportunities for teaching and research at the District of Columbia General Hospital. The indigent patients will in turn benefit from a closer association with the university hospitals since with improved teaching and greater emphasis on research the standards of medical care must necessarily be raised. The community will profit not only because of more efficient care to the indigent population, but also from the research accomplished at the institution.

It would not take much of an investment, considering the great returns, to provide the support required to improve the teaching and research programs at the District of Columbia General Hospital. This could be accomplished primarily by the construction of a building devoted exclusively for research located in close proximity to the presently available clinical facilities. Specific areas of this building could be set aside for each of the affiliating university hospitals and one area for independent physicians who are interested in pursuing their research interests at the city hospital. The equipment and personnel required for the operation of this building could easily be procured by the universities with money available for research purposes. Construction of such a building exclusively for research purposes has many precedents, and one need only cite Cleveland, Boston, Philadelphia, as examples.

It is hoped that Congress will have the vision to make it possible to utilize the tremendous resources of the District of Columbia General Hospital and establish in the Nation's Capital a city institution that will set high standards for other similar institutions throughout the country in inpatient care, teaching, and research.

Proof of the pudding is in the eating, and proof of the many significant contributions to medical knowledge and education by the District of Columbia General Hospital is shown by such things as the 293 articles written during the last 5 years by the members of the hospital's staff.

I include here as part of my remarks a bibliography of the 84 articles written during the years 1957–58 alone which eloquently attest to the splendid work which the District of Columbia General Hospital, has done and is doing.

Wilkes-Barre General Hospital Breaks Ground for New Building

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 30, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of July 22, 1959, as well as an editorial and a news story from the Wilkes-Barre Record of July 23, 1959:

[From the Wilkes-Barre Times Leader, July 22, 1959]

HOSPITAL MILESTONE

The ground-breaking ceremony at Wilkes-Barre General Hospital this afternoon for the proposed $3 million new building and other improvements is a milestone for the community as well as for the institution itself which has served Luzerne and adjoining counties since 1872.

From an humble beginning in a rented building, the hospital, which started with a modest 20 beds, will emerge, when construction is completed, into a modern institution with 500 employees and a medical staff of 104. This truly represents progress for the hospital and for Greater Wilkes-Barre.

In proceeding with the ground-breaking, directors of Wilkes-Barre General Hospital indicate confidence that the $125,000, needed to put the $2 million drive over the top, thus qualifying for $1 million from the Government, will be forthcoming from the public. We are certain the community will not let the institution down.

Future generations will have cause for gratitude to those who have given so freely of their time, talent and resources to provide these facilities for the use of the public. It will be an enduring monument.

[From the Wilkes-Barre Record, July 23, 1959]

HOSPITAL CEREMONIES

Groundbreaking ceremonies held yesterday at Wilkes-Barre General Hospital were, as some of the speakers pointed out, a high point in the hospital's history.

First, the new $3 million hospital remodernization program marks the first major construction at the hospital since 1928. Architectural plans call for making it one of the showplace medical institutions in America.

When completed, 580 days from now, the new hospital will make all of Wyoming Valley proud, yesterday's speakers stressed.

A second historic high point in the hospital's 85-year record, the speakers held, is the widespread level of community support given to the building program.

The public made no fewer than 25,000 pledges to the hospital's four-way fund campaign. Contributions and pledges came from all areas of the valley.

Galvanizing all this was an army of volunteer workers who gave of their time and money freely.

Historic highlights, indeed. They prove, once again, that the people of Wyoming Valley love their community, and will exert themselves inspiringly to its betterment when called upon.

The public of Wyoming Valley, which contributed 25,000 pledges totaling $1,875,000 to the Wilkes-Barre General Hospital building fund campaign, was thanked for its magnificent response, at groundbreaking ceremonies for the new hospital held yesterday afternoon at 2 at the hospital grounds.

Participating in the brief impressive ceremonies were: F. E. Parkhurst, president of the board of directors, who dug the first shovelful of ground; Dr. Lewis T. Buckman, chairman of the first phase of the hospital's campaign drive; Dr. Samuel T. Buckman, chairman of the general fund campaign; Samuel M. Wolfe, Jr., chairman of the building committee, and who was master of ceremonies. Rev. John O. Lindquist, pastor of Trinity Lutheran Augustana Church, gave invocation. Benediction was by Rev. R. E. Larkin, pastor of St. John's Roman Catholic Church. Both churches are neighbors of General Hospital.

Also participating in the groundbreaking ceremony was Marlene Butry Noxen, president of the General Hospital Student Nurses' Association.

Mr. Parkhurst, terming the groundbreaking "a great date in local history," lauded what he described as the "wonderful loyalty and cooperation" received from everyone. He cited the Women's Auxiliary, the Nurses' Auxiliary, the doctors, board of directors, employees, and the entire community for the inspirational way they have helped make the new showplace hospital a reality.

The hospital president gave special praise to Dr. Samuel T. Buckman and Dr. Lewis T. Buckman for their campaign leadership, and saluted two specified friends of the hospital who were in the audience. They included Mrs. William Conyngham and Dr. Edward W. Bixby.

Dr. Samuel T. Buckman addressed his thanks to the workers and the thousands of public-spirited contributors. The new hospital, he declared, "will make us all better people."

Laudatory remarks were expressed also by Dr. Lewis T. Buckman, and Mr. Wolfe.

Yesterday's groundbreaking marked start of actual construction work by Ramon R. Hedden Co., Nanticoke, holder of the contract for general construction.

It is expected the new hospital, planned as one of the showplace medical buildings in America, will be completed in 580 days.

At that time, Mr. Parkhurst stated, there will be a second and much more extensive ceremony.

The groundbreaking was a high point in General Hospital history. Last major construction was in 1928. The new hospital was made possible by the first public appeal for capital funds for construction in the hospital's 85-year history.

Hospital officials said the new general hospital, when completed, will represent one of the most modern and beautiful hospitals in the Nation.

New construction will replace four of the oldest buildings scheduled to be razed, and also provide modern facilities for all departments. Approximately 100,000 square feet of space will be affected.

The present private patient building will be connected with the new construction to form one completely unified modern establishment.

Following are highlights of new construction plans:

Ground floor will contain sections for emergency and outpatients, physical therapy, medical records, administrative and business offices, main lobby, gift and hospitality shop, chaplains' office, and a religious meditation room.

First floor will include a central supply and pharmacy, surgical suite, X-rays, and doctors' library and lounge.

Second and fourth floors will provide patients' bedrooms, nurses' stations, utility rooms, baths, serving kitchens and day rooms.

Third floor, transformed with most up-to-date equipment and facilities, will be for maternity patients and new born infants.

The newly constructed hospital will provide 132 beds to replace the 130 now deemed obsolete.

Hospital building committee includes: Samuel M. Wolfe, Jr., chairman; Frank W. Anderson, Dr. Samuel T. Buckman, F. E. Parkhurst, Dr. Carlos E. Rodriguez, and William O. Sword.

Ellerbe & Co. are architects for the new hospital. Local associate architect is Robert A. Eyerman.

The new hospital was under consideration for 10 years. Campaign to raise funds for remodernization was decided following announcement by the Federal Government that a $1 million Hill-Burton Grant would

be available if the hospital raised $2 million on its own.

Last summer a four-way campaign was started. First phase was an unpublicized drive among the general hospital family itself. Advance gifts campaign was launched January 7, followed by the general campaign February 4.

Operation Windup, final stage, is underway to complete solicitation of prospective contributors and reach the $2 million goal. Upon attaining $2 million the additional $1 million will be forthcoming in Federal funds.

Connecticut's Successful Rocketeers and Archeopterex I

EXTENSION OF REMARKS
OF

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 30, 1959

Mr. GIAIMO. Mr. Speaker, on Memorial Day this year, four young men from Branford, Conn., saw the successful culmination of a year's work when they were given an opportunity to fire their amateur rocket—Archeopterex I—at Camp A. P. Hill in Virginia.

The firing was a successful one, and four elated young men went home to begin plans for their second rocket.

These four students, all about 16 years of age, have demonstrated a remarkable talent and interest in amateur rocketry. Under the guidance of their instructor, Mr. Chester Carlow, and the advice of Dr. George Wheeler, professor of physics at Yale University, these four designed, built, and succesfully fired their 6-foot rocket. They applied the principles of the classroom to the practical business of building a rocket.

All four—Richard Griffin, David Harrison, Robert Underwood, and Thomas Hines—are students at Branford High School. They have been an inspiration not only to their fellow students, but also to their teachers, parents, and everyone in their community and State who can appreciate the thoughtful work these boys have put into the building of their rocket.

The local newspapers, however, tell the story much better than I, and I should like to quote from them. These articles and editorials express the feelings we hold for these enterprising young men:

Al Callan, reporter for the New Haven Journal-Courier, writes in his eyewitness account of what happened at Camp A. P. Hill:

The bright-red, 6-foot-long rocket soared upward faster than the eye could follow—disappearing into clear blue skies.

Army officials said the launching was "The best we've seen—and the most successful ever," at Camp A. P. Hill.

The successful launching came at 12:02 p.m.—after two dramatic failures earlier in the day.

No one could say exactly how high the rocket had gone. Two experienced Army ordinance men who watched the launching from a vantage point a half-mile away, estimated its maximum altitude at 5,000 to 6,000 feet.

The reaction of the four Branford High School youths who built the rocket, their instructor-counselors, and the relatives present, was summed up by 16-year-old Dick Griffin:

"Holy cow, did you see that thing go?" he gasped.

In this moment of triumph they shared the emotions felt by scientists at Cape Canaveral and Alamagordo.

The New Haven Evening Register, in an editorial on May 18, remarked—

The Camp Hill launching is evidence that the armed services are interested in the work of schoolboy scientists in rocket projects—if they are competently supervised and conducted under proper controls. So, a salute to the Branford Rocketeers for making the grade.

The New Haven Journal-Courier editorialized on May 29—

Area readers, impressed and laudatory on the homeside science coverage of the Journal-Courier series, will be cheering on the young rocketeers in the Camp Hill experiments. And their interest will be whetted by the knowledge of what it takes to get a schoolboy rocket off the ground—under competent, controlled conditions. The boys and their advisers deserve and rate an extra salute for going about their project in the responsible way they have.

Throughout, it is made clear that the success of these boys could not have been made possible without the guidance of Army officials. Clearly, the cooperation and interest on the part of Col. A. B. Cushing and the many other Army officials helped give these young men an opportunity in this free country of ours that few others in the world have today.

It is refreshing to see these young men take on the responsibility of augmenting their education through practical application; not to rest on their laurels after one successful attempt, but to go on to improve their own knowledge and to apply what they have learned from Archeopterex I by building another and larger rocket.

The attitude of the Connecticut community is best summed up in an article written by Reporter Al Callan of the Journal-Courier on June 2. This article, Mr. Speaker, reflects the pride and interest that the people in their community have taken in the four rocketeers, and I would like to quote it here in full:

[Reprinted from the New Haven Journal-Courier, June 2, 1959]

BRANFORD ROCKETEERS PLAN NEW THREE-STAGE ROCKET

(By Al Callan)

BRANFORD.—Elated by the spectacular success of their first rocket, the Branford High School Rocketeers today are making plans for "Archeopterex II."

The club's first rocket, "Archeopterex," meaning primitive bird, was launched Saturday at Camp A. P. Hill, Va., Army authorities said it was the best amateur rocket ever launched at the base.

PLAN NEW ROCKET

The four 16-year-old high school juniors now hope to build a three-stage rocket (the other had one stage) with a nose cone containing a live mouse, a parachute to return the mouse safely, and a radio transmitter to radio back altitude data as the rocket speeds skyward.

Army authorities have promised to cooperate.

Speaking to a Journal-Courier reporter after Saturday's launching, Base Commander Col. A. B. Cushing said, "Send us more groups like this one."

Branford club members praised the Army for its hospitality and cooperation.

"The Army people were wonderful to us," said Chester Carlow, Branford High math teacher and counselor of the club.

Meanwhile, the four rocket-builders were patted on the back by their schoolmates and teachers.

CITES INTEREST

"We are very proud and interested in the boys," said Ernest Hatfield, principal. "It's quite an honor for the youngsters and for the town and the school. I believe their success with the rocket has created more interest in science among the student body."

The rocketeers will be guests of honor at the Branford Rotary Club's luncheon next Monday.

John E. Loeb, a Rotary Club member, said the boys' "scholarship and initiative ought to be recognized."

"Archeopterex II," now being planned, will be a three-stage rocket approximately 15 feet in length. Rocket club member Tom Hines (the others are Dave Harrison, Bob Underwood and Dick Griffin) said, "It should reach 50,000 feet."

The boys' first rocket, 6 feet long, went up an estimated 5,000 to 6,000 feet. Since the rocket passed out of sight, its sulfur-and-zinc fuel mixture may have propelled it to even greater heights.

The boys expressed regret that they will have to build the new rocket without Carlow's personal guidance. He has received a 1-year fellowship from the National Science Foundation to study math at the University of Minnesota. He and his family will leave June 19. He expects to return to Branford.

AID FROM WHEELER

However, the boys expect further assistance from Dr. George Wheeler of Yale, a nuclear physicist. Professor Wheeler helped the boys with Archeopterex the first and accompanied them on their trip to Camp A. P. Hill.

The boys hope the Army will fly them to Fort Sill, Okla., for the launching of their new, bigger rocket. Camp A. P. Hill handles only rockets with a potential altitude of 20,000 feet or less, because of airline traffic at 22,000 feet overhead.

Because of the nationwide interest in amateur rocketry, and President Eisenhower's desire to stimulate do-it-yourself science experiments by high school students, the Army is now setting up a new range for amateur rockets at Fort Knox, Ky.

There are over 5,000 amateur rocket societies in the United States, with 40,000 members. With the aim of channeling this enthusiasm into the proper direction, the Army began making plans for its first amateur rocket range at Camp A. P. Hill, Va., in July of 1958.

Seventy amateur rocket groups, mostly from high schools in the eastern United States, took part in a 2-day launching program last February 28.

Although many of these rockets were successfully launched, none was as successful as the Branford group's rocket of last Saturday.

The next mass launching at Camp A. P. Hill will take place September 28. Larger rockets will be launched during the summer at Fort Sill.

Coal Consumers in Anthracite Areas Pay Over $55 Million for Fuel

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Wilkes-Barre Record of Wednesday, July 29, 1959:

COAL CONSUMERS IN ANTHRACITE AREAS PAY $55,339,000 FOR FUEL

Consumers of anthracite in the regions in which it is produced last year used an estimated $55,339,000 worth of coal, according to Anthracite Institute.

In the Wyoming, or local region, consumers paid $25,832,000 for coal. Consumers in the Schuylkill region paid $23,203,000 for coal and those in the Lehigh region expended $6,304,000.

Sales at the mines in the three regions last year amounted to $38,105,000. In addition, sales from silt banks without preparation, largely to electric utilities, totaled $2,893,000 last year, bringing sales to $40,998,000 for the 4,780,000 tons sold locally.

While accurate figures are not available as to transportation or dealer charges, it was announced a reasonable average would be $3 a ton of all sizes, which would result in the additional expenditure of $14,340,000 last year.

In the local region anthracite sales at the breakers last year were estimated at $19,279,000, an increase of $328,000 or 1.7 percent compared to sales of $18,951,000 in 1957. Pea size is the most widely used in the producing regions. Last year regional consumers paid $11,033,000 for this size.

Pennsylvania anthracite deposits underlie a surface area of approximately 484 square miles, divided by trade usage into three regions and by geologic conditions into four fields. Wyoming region, the local area, is coextensive with the northern field. Lehigh region is made up of the entire eastern middle field plus that part of the southern field lying east of Tamaqua. Schuylkill region includes all of the western middle field plus that portion of the southern field west of Tamaqua.

Approximately 20,500,000 tons were produced by the industry last year. Northern, or local field, produced 7,657,201 tons or 37.4 percent of the total; western middle field, 5,982,747 tons or 29.2 percent of the total; southern field 5,086,583 tons or 24.9 percent of the total and eastern middle field 1,738,555 tons or the remaining 8.5 percent of the total. Preceding figures include underground, stripping, and culm bank production but do not include semianthracite produced in Sullivan County or recovery of coal from river bottoms by dredges.

MOST DEEP MINING LOCALLY

Greatest concentration of deep mining last year was in the northern, or local field. Comprising approximately 176 square miles the underground production in this field last year was 30,040 tons a square mile. Stripping operations resulted in production of 10,340 tons a square mile while 3,130 tons a square mile were taken from culm banks, making the regional total last year 43,510 tons a square mile.

Eastern middle field ranked first in concentration of stripping and bank operations but the western middle field had the highest overall production a square mile of any of the four fields. Western middle field production of all types reached 63,650 tons a square mile. This field extends roughly from Mahanoy City westerly through Shenandoah, Frackville, Girardville, Centralia, Ashland, Mount Carmel and Shamokin to Treverton, a distance of about 35 miles. In this relatively narrow strip production last year averaged one ton of anthracite for every 438 square feet of surface.

CANADA EXPORTS IMPROVE

Signs anthracite export trade to Canada is showing improvement compared to last year are definite, the Institute said. While Canadian receipts of Pennsylvania anthracite were not as high in April as in March they were substantially higher than in April 1958, according to the Institute. They also showed a sizable gain in the first 4 months of this year as compared to a year ago.

British anthracite on the other hand, continued its declining importance in the Canadian market. In April Pennsylvania anthracite industry shipped 65,485 tons of coal to Canada, an increase of 14,513 tons or 28.5 percent compared to tonnage sent to Canada in April 1958. For the first 4 calendar months of this year anthracite shipments to Canada were 58,092 tons or 15.7 percent greater than the same months last year. Shipments of British anthracite to Canada during April dropped 2,918 or 72.9 percent compared to shipments in April 1958.

Railroad originations of anthracite in June were 17 percent ahead of May and within 2 percent of June 1958. This brought the first quarter of the current coal year to 1.5 percent ahead of 1958–59.

Railroad originations of pea and larger sizes of anthracite destined for regular markets in the United States and Canada were down only 4 percent from the 12 months ending June 30, 1958.

Commercial production for the week ending July 25 was estimated at 284,000 tons, bringing production since January 1 to 8,449,000 tons.

Conclusion Also Overdue

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. BETTS. Mr. Speaker, there has been much speculation recently as to the general feeling on debt reduction. For a reaction from rural Ohio I offer the following editorial from the Daily Chief-Union at Upper Sandusky, Ohio. I am certain that it expresses the overwhelming sentiments of grassroots thinking, namely, that in times of prosperity it is wise to pay off our debts.

CONCLUSION ALSO OVERDUE

President Eisenhower this week asserted at a press conference that there can be no thought of cutting taxes until some payment on the huge national debt has been made. He hinted that a cut in the debt is overdue. This, we believe, is a conclusion that also is overdue. The president has urged a payment on the debt before. Others in Government, including Senator BYRD of Virginia, have been pounding at this issue.

Since World War II, the Federal debt has been cut only three different years. By 1946 it had risen to over $269 billion. The following year it was cut to $258 billion and in 1948 was cut to $252 billion. It then rose to $257 in 1950 and again during the Truman administration was cut slightly to $255 billion. The first two cuts mentioned were largely the result of appropriations unspent as the war ended. The debt has gradually increased since 1951 with the exception of 1956 when it was reduced $1.6 billion.

President Eisenhower pointed out that the interest alone on the Federal debt a year hence will amount to $8.7 billion, or more than double the last two reductions. It must be acknowledged that the cold war has to all practical purposes made any efforts at cutting Federal spending and the Federal debt almost impossible. With current prosperity and if there had been no past wars to pay for, and little prospects of future conflict, such a debt could be paid off quite easily within a few years. This is a wealthy and prosperous Nation and it is difficult to believe that a debt of even such proportions is impractical. However, it should not be allowed to increase in peacetime.

Other nations have been forced to labor in sweat and tears to restore wrecked economies. This Nation has gone merrily on its way as if there were no dangers facing it in the future. Economic ruin does not seem likely, but it is a possibility. We definitely would be in trouble should a depression strike. Prosperous times offer great opportunities for preventing such dangers.

Senator Smathers and Hemisphere Economic Plan

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, July 30, 1959

Mr. MANSFIELD. Mr. President, there appeared in today's Washington Evening Star an article by Constantine Brown entitled "The United States and Latin America." In this column Mr. Brown pays great and due credit to the Senator from Florida [Mr. SMATHERS], who has been a long-time and consistent friend of Latin America, and who has made great efforts in seeking to foster better relationships between the countries of this hemisphere.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star, July 30, 1959]

THE UNITED STATES AND LATIN AMERICA—VALUE OF HEMISPHERE ECONOMIC PLAN BACKED BY SMATHERS IS EMPHASIZED

(By Constantine Brown)

Senator GEORGE SMATHERS, chairman of the Latin America Subcommittee of the Interstate and Foreign Commerce Committee, believes that the formation of a Western Hemisphere Economic Community is vital to the future of our Nation. The facts seem to bear him out.

The 20 nations of Latin America share a basic political philosophy with the United States. To a large degree our economies are complementary rather than competitive.

From a defense standpoint, the interdependence of the countries of the Western Hemisphere becomes even more apparent in the missile age. Actually, it is doubtful whether the United States could even con-

tinue to operate the missile center at Cape Canaveral, Fla., without the full cooperation of our neighbors to the south.

Senator SMATHERS, a Florida Democrat, believes many Americans have been so propagandized about the importance of Europe and some sections of uncommitted Asia that they know little, and care less, about what is happening in our own back yard.

Few persons realize that 26 percent of our exports go to Latin America and almost 28 percent of our imports come from that area.

In view of our adverse trade balances in other areas, these figures assume great importance. Almost every material designated by our Government as strategic—that is, vital to U.S. security—is represented in our imports from Latin America.

As of January 1958, U.S. private capital had invested $8.8 billion in the economies of Latin American nations. This represents almost one-third of our private investments abroad.

Senator SMATHERS points out that the 20 Latin Republics, whose population now is 175 million, are expected to have 300 million people by the year 2000—just 40 years away.

Considering the mutual benefits to be derived from a closer economic union with Latin America, it seems remarkable that in the fiscal year 1958 the United States granted $223 million to Vietnam, where the taxpayers' money was scandalously mismanaged, and only $117 million to all of the American Republics.

It is easy to justify the Vietnam expenditures by the old cliche, "If we don't support their economy, they will go Communist." On the other hand, if a country is going to be Communist, would we rather it be Vietnam or, for example, Guatemala?

In Senator SMATHER'S opinion, which more and more is being shared by others in Congress, the United States had better increase its efforts to develop the expanding Latin American market. Otherwise, we will lose it to our European and Japanese competitors.

It is time we dismiss the storybook myths of Latin American indolence and inefficiency and realize that American businessmen must travel south with sample cases containing good products at reasonable prices and convince our neighbors that they can get the best deal with us.

According to the Florida junior Senator, we need more trade missions, assisted by the Commerce Department and the State Department wherever possible, and fewer good will visits devoted to cocktail parties and fashions.

In essence, the American salesman had better get back to work or he is going to lose the best bet of the century.

We must return to certain of the commercial practices which made us what we are, and stick to a policy of business is business, whether it is across the street or below the equator. If we want it, we are going to have to go out and get it. If we don't, somebody else will.

The People Know What They Want

EXTENSION OF REMARKS
OF

HON. WILLARD S. CURTIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 30, 1959

Mr. CURTIN. Mr. Speaker, shortly after this session of the Congress convened, I sent a questionnaire to virtually every home in my district—regardless of party affiliation—inviting thoughts and ideas on 15 key questions which would likely come before the Congress.

The response was exceptionally good, with better than 20 percent of the questionnaires returned. They were returned, not only as individual views, but as the combined expression of the views of husbands and wives, of entire family units, as the projects of high school classes, and as the majority views of groups in civic clubs who made the questionnaire their projects for an evening.

I feel that the views of the people of my district—which represents a good cross section of our citizens, since it includes the residents of a city, several boroughs, farming areas and suburban communities—should be interesting to all of us at this time. Consequently, under leave to extend my remarks, I am including herein the questions and a report on the answers so returned to me:

FAVORED

(1) Economy in Government.

(2) An increase in postal rates if necessary to balance the budget.

(3) A strong labor-management reform bill.

(4) A gradual reduction in Federal aid to certain forms of local activities.

(5) Discontinuance of price supports for farm products.

(6) Admitting fewer immigrants to the United States.

(7) Keep up our efforts to ban nuclear tests.

(8) A firm no retreat policy in West Berlin.

(9) A tax reduction.

(10) Allowing the President to veto financial items individually.

While favoring by a slight margin the proposal to increase postal rates in order to balance the budget, the residents of the Eighth Congressional District of Pennsylvania were resoundingly opposed to an increase in the Federal tax on gasoline for the same purpose. Sixty-five percent said "no" to the question of a gas tax increase with only 25 percent favoring a boost.

Here is a breakdown of the questions, and the reactions to each:

Question No. 1: "The budget submitted to Congress by the President for the 1960 fiscal year proposes to stay in balance, even though it is high by past standards. Still, it is opposed by some who contend that it is not large enough to meet the Nation's needs. How do you feel?" Here was the response: 76 percent said "we favor a balanced budget"; 5 percent thought "it should be larger"; 10 percent wrote "should be smaller"; 7 percent opined that "balancing the budget is not important"; the remaining 2 percent had no opinion.

Question No. 2 was: "To balance the budget, it's been suggested that postal rates be revised to bring in $350 million more revenue. Also, an increase of 1½ cents a gallon Federal tax on gasoline is proposed. Do you favor an increase in postal rates?" Fifty-one percent said "yes"; 41 percent, "no"; the remainder had no opinion. The second part of the question asked, "Do you favor an increase in the Federal tax on gasoline?" No, 65 percent; yes, 25 percent; no opinion, 10 percent.

Question No. 3 asked: "Some kind of labor-management reform legislation seems certain to be enacted by this session of Congress. The big question is how far the changes will go. Do you favor a strong reform bill with teeth?" (Eighty percent said they did.) "Only moderate change?" (Twelve percent went for this.) "No changes from present law?" (Just 4 percent favored the status quo.) The remaining 4 percent had no opinion.

Question No. 4: "Area redevelopment and urban renewal are subject of much discussion in Congress, particularly with respect to how far the Federal Government should go in helping defray the cost of clearing slum areas in larger cities, developing new residential and industrial sections in blighted neighborhoods, etc. Do you think the Federal Government should (a) bear most of the cost" (only 4 percent in favor of this); (b) "share the cost with others" (32 percent for this); (c) "just make loans to be repaid later" (62 percent were for this). Two percent voiced no opinion.

Question No. 5: "In order to encourage State and local governments to assume responsibility for certain public needs now mostly financed by Federal aid, it has been proposed that Federal grants for such activities as vocational education and construction of waste treatment works be discontinued starting in fiscal 1961. How do you feel about this?" Thirty-two percent felt this kind of Government spending should be discontinued; 17 percent were for continuing it, and 49 percent would like to see this kind of Government spending reduced gradually. Two percent did not comment.

Question No. 6: "To encourage more interest in higher education, science, and mathematics, Congress authorized the Department of Health, Education, and Welfare to initiate a program of repayable contributions to loan funds for college students and for grants-in-aid to States. One hundred and fifty million dollars is provided in the 1960 budget for this purpose, but there is legislation before Congress to spend much more than this. Do you think (a) the present program of loans is adequate?" (52 percent agreed to this); "we should spend more" (29 percent favored this); (e) "spend less" (15 percent). No opinion—5 percent.

A new farm plan was the subject of question No. 7. "It appears that a new farm plan will be introduced to pay direct subsidies from the Federal Treasury to farmers, covering the difference between the market price for their products sold in this country and a so-called fair price set by Congress. This would replace the present system of price supports. What is your attitude?" Here was the response: 8 percent favored direct subsidies with 9 percent against direct subsidies; 7 percent prefer the present policy of price supports; 18 percent would reduce present list of price-supported crops, and a definite majority of 51 percent were against price supports of any sort. Seven percent gave no opinion.

Question 8, in two parts, brought out these feelings: Question 8A: "It has been recommended that the mutual security program, designedto help strengthen the defense of free nations, be given $3.5 billion next year, or about 20 percent less than fiscal 1959. What do you favor?" Reducing mutual aid by this amount, 54 percent. Keeping it at least as high as it was in 1959, 22 percent. Cutting it more, 21 percent. No opinion, 3 percent.

The reaction to 8B was decisive. In answer to the question, "Do you think we should give economic assistance to countries like Poland and Yugoslavia, which are governed by Communist-type forces, or restrict it to countries not so governed?" 81 percent would restrict giving, with only 13 percent in favor of giving to any country. Six percent did not express their views.

The ninth question brought a more clear-cut reaction than any of the others. "Under present procedures, the President has to accept or reject or appropriation bill in its entirety. I have introduced legislation that would enable the President to consider a separate item on its own merits, thereby making it possible for him to eliminate unnecessary or unjustified appropriations. Congress would still retain its constitutional

power to override any specific veto. Do you favor this?" Ninety-two percent said "Yes"; 4 percent opposed, and 4 percent did not give an opinion.

Question 10 asked: "Interest payments on the national debt are expected to rise $495 million to $8.1 billion in fiscal 1960. In other words, payments for interest on the public debt alone represent more than 10 percent of our total Federal budget. Are you in favor of putting a realistic ceiling on the amount of Federal debt which now stands at $285 billion?" Favor putting ceiling limit, 44 percent; would not restrict, 9 percent; would reduce debt, 41 percent. No opinion, 6 percent.

On immigration, the question was: "There is some sentiment to revise our immigration laws on the grounds that present laws are outdated. What do you favor?" Fifteen percent were for more immigration; 41 percent for less immigration, and 38 percent in favor of permitting the same number as by present law. Six percent did not express their views.

Question 12 asked: "The United States is faced with a decision on whether it should push forward or pull out of disarmament negotiations with the Soviet Union. Talks in Geneva on a nuclear weapons test ban seem to have bogged down. There are many persons who are much concerned about the danger of fallout from such nuclear tests. What do you think we should do?" Forty-four percent said to "tell Russia to show good faith or break off talks at Geneva." Another 44 percent were in favor of continuing working to ban nuclear tests. 9 percent would give up the idea of banning tests. Only 3 percent did not comment.

The constitutents were emphatic in their feeling for a "no retreat" policy in West Berlin. The 13th question was: "The situation in West Berlin and East Germany could lead to a very strained series of events which will have a strong effect on the future U.S. role in Europe. What do you favor?" A "no retreat" policy in West Berlin, 85 percent; partial, or "token" withdrawal of American soldiers from Germany, 7 percent; full withdrawal from Germany, 3 percent. No opinion, 5 percent.

The replies left no doubt in answer to question 14. "The President has held out the prospect of a tax reduction if the budget can be balanced and spending can be held down. Do you believe we should (a) Aim for a tax reduction?" (78 percent favored this); (b) "Resign ourselves to higher Federal spending and no tax reduction" (14 percent checked this). No opinion, 7 percent.

There was divided opinion on the final question. "There is much discussion now going on about continuing certain so-called excise or 'luxury' taxes originally enacted during World War II. These include taxes on transportation of persons, local telephone calls, furs, luggage, and jewelry. Do you favor the repeal of such taxes?" Yes, 48 percent; no, 45 percent; no opinion, 7 percent.

Address of Robert Y. Garrett Before Camden, N.J., Rotary Club

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Thursday, July 30, 1959

Mr. CASE of New Jersey. Mr. President, Charles A. Wolverton, who served with distinction in the House of Representatives for many years from New Jersey's First Congressional District, has called my attention to a speech given in Camden, N.J., recently by Robert Y. Garrett. Mr. Garrett, a leading citizen of Camden, presented his address before a meeting of the Camden Rotary Club. I ask unanimous consent that his remarks, which describe the history, goals, and achievements of Rotary International, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS DELIVERED BY ROBERT Y. GARRETT AT MEETING OF CAMDEN ROTARY CLUB ON JUNE 16, 1959, HELD IN WALT WHITMAN HOTEL, CAMDEN, N.J.

It is a pleasure to say a few words of welcome to you new members of Camden Rotary. The speaker customarily designated to deliver this message is usually a past district governor or other officer of equal rank. In the preparation of these few words I had a feeling of inadequacy and a deep consciousness of my limitations.

What is Rotary? Paul Harris, the founder of Rotary described it this way. "It is easier to note what Rotary does than to say what it is. If Rotary has encouraged us to take a more kindly outlook on life and men; if Rotary has taught us greater tolerance and the desire to see the best in others; if Rotary has brought us pleasant and helpful contacts with others who also are trying to capture and radiate the joy and beauty of life, then Rotary has brought us all that we can expect."

Paul Harris started the first Rotary Club in Chicago on February 23, 1905. It was founded on the theory that many successful businessmen are lonely. Harris was born in Wisconsin, spent his boyhood with his grandparents in Vermont, went to college at the University of Vermont and Princeton and took his law degree at the State University of Iowa.

Paying his way by whatever job came to hand, he spent 5 years in seeing the world. He worked as a raisin packer in Fresno, an actor in Denver, a cowboy in Colorado, a night clerk in Florida, and a deckhand on a cattle boat to France, and finished off by touring Europe as a marble buyer.

After completing his studies at Princeton, Paul Harris went to the University of Iowa. En route he spent a week in Chicago where the unrest and wickedness of this hustling city possessed him with a weird fascination. It was so different from his New England valley. But he sensed something vital in it all. Why were some good and others bad? Why did some make sacrifices? Did they pay? If so, how? Why were others wasteful of their physical, mental, and moral resources? Was there wisdom in grandfather's precepts or was he simply a well meaning but deluded old fogey?

In 1896 he began the practice of law in Chicago and for a number of years things went poorly. Weekdays his practice kept him from thinking about himself, but Sundays and holidays were days of sorrow. He would go down to one of the churches in the morning but during the long afternoons he said "I was desperately lonely. Oh, for the green fields of my New England valley and the voice of a kindly old friend." There is no place like a city park on a Sunday afternoon to feel one's loneliness; the very presence of so many strangers accentuated it more than boundless expanses of land and water could do.

Blessed with characteristic New England kindness and friendship it is not difficult to understand how this young lawyer yearned for something more than clients in the vast city of Chicago. Everywhere there were people but nowhere a familiar face. Recalling a line from Emerson, "He who has a thousand friends has not a friend to spare." Paul Harris said: "I had neither the thousand nor the one." With this background, is it difficult to understand why high in Rotary program is the development of acquaintance as an opportunity for service. Rotary seeks to bring people together through friendship with each other to participate in community betterment, promote high standards in business and professional life, and advance international understanding, and goodwill and peace.

A bachelor without roots, unacquainted in a big strange city, he was lonely. His few acquaintances were businessmen. He began to think in terms of a club that would cure lonesomeness. After planning for many months, Harris revealed his idea to three other men, a coal dealer, a mining engineer, and a tailor. All of the present essentials of our club today were there including classification the rule that a club could only admit one member of any business or profession. By August the club had 21 members—mostly men who had been raised in small towns. They wore badges, used first names, read papers on business and public affairs, but unlike Rotary of today the early drafts of a statement of objectives had a mutual assistance clause and the first few secretaries had to keep a book on how much business was transacted between members each week. Before long that practice was dropped and emphasis placed on the ideal of service and integrity in business—at home—in the community—in all things.

Rotary is not a religion nor a substitute for religion but it does concern itself with the moral and the ethical which go hand in hand with deep religious conviction. Rotary's program is to encourage and foster the ideal of service as a basis of worthy enterprise and in particular, to encourage and foster—

(a) The development of acquaintance as an opportunity for service;

(b) High ethical standards in business and professions, the recognition of the worthiness of all useful occupations, and the dignifying by each Rotarian of his occupation as an opportunity to serve society;

(c) The application of the ideal of service by every Rotarian to his personal, business, and community life;

(d) The advancement of international understanding, good will, and peace through a world fellowship of business and professional men united in the ideal of service.

Early in my Rotary life the fellowship of this club made a deep impression on me and afforded me an opportunity of winning the friendship of many men whose lives made an everlasting contribution to the social and political life of this community. Many people are Rotarians in spirit although not actually enjoying the privileges of belonging to this great worldwide movement. This fact, however, should not deter us as a club but should spur us on to greater and higher achievements because as a unit we should be better able to furnish the materials and the unity to accomplish far more than is possible by individual effort.

As we honor these new members of our club let us see just how the club through its members can become a part of the answer to the problem of our time. Someone has said: "The most pertinent prayer I think is ever heard goes like this: 'Lord, help me to be part of the answer instead of part of the problem.'"

All of us envison a better tomorrow. But are we willing to work for it, to do something? It just will not happen; it will need implementation or there will be retrogression and stagnation.

Rotary was founded originally as a panacea for lonesomeness. As a result of persistence and sincerity, friendly contacts

have been made among all nations and creeds the world over. Now that the atmosphere has been set, perhaps our current drive should be to make men appreciate their potentials.

As Rotarians we have privileges beyond those enjoyed by many men. We operate on a high level. We have vision and faith. We believe in the future and especially so when we know that men like you, men of high purpose, will follow after us. Our task now is only to show you the way, put you to work. Quickly, you, too, will catch this vision of service and carry forward in the spirit of Rotary.

Isn't it significant that throughout history the talents for great and inspiring leadership have been reserved for only a very, very few men? Along the way some of you will hear the complaint: "What can I or a few of us do against such great odds?"

Rotary's membership when compared with the world's population is almost infinitestimal. Yet the influence it wields, the prestige it enjoys constitutes a tremendous voice for good. By precept and example we as community leaders are constantly showing the way.

I for one am thankful that Paul Harris didn't quit in disgust, or despair, or discouragement. Here we have the evidence of a relatively unknown, unsung man who had a vision out of which came a world fellowship founded on respect and understanding each man of good will for his neighbor.

And lest there are those among us who say that such men are not for our fast moving, competitive century, I think as Rotarians we cannot listen often enough to the simple, clean, and very electrifying story of Albert Schweitzer. Instead of saying, "There was a man," we can rejoice that there is a man.

With a reputation as one of the great organists of Europe and a recognized authority on Bach he combined talents which made him one of the world's foremost physicians. Everything lay before him: fame, riches, worldly pleasures and comforts, the applause of his fellows.

But his heart, his conscience, his soul were to be reckoned with. Out of a heart of love and a desire for selfless service he gave up everything, or so it would seem, to go to an obscure, primitive section of Africa, there to live and minister to savages. Today his stature as a man has almost reached the proportions of sainthood. When he wrote something back that "you don't live in a world all your own. Your brothers are here, too," he sounded a clarion call which you in Rotary will hear over and over again.

Listen to it. Do something about it. "Service above Self" will echo time and again through your Rotary experience. Pay attention to it for from now on service is your business.

Welcome and may you grow and prosper yourselves as you serve your fellow men.

Should Unemployed Have Census-Taking Jobs?

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Norman Anderson of West Fargo, N. Dak.:

WEST FARGO, N. DAK.,
July 29, 1959.

FARGO FORUM.
KINDRED TRIBUNE.
CASSELTON REPORTER.
HUNTER TIMES.

DEAR EDITOR: As a representative of the United Packing House Workers of America I am very much concerned for the welfare of more than 300 former employees of Armour & Co. who were made jobless as a result of the Armour plant closing at West Fargo. Most of these employees live in the 9th, 10th, and 11th Legislative Districts of Cass County. The employment situation in this area is not good and many of the Armour employees have been forced to leave their communities and seek employment in other States. Therefore, I am deeply concerned with an article written by Gifford Herron, State editor of the Fargo Forum in the Sunday Fargo Forum of July 26, 1959, stating the method by which census workers are to be hired in Cass County.

According to the article as many Republican precinct committeemen as possible are to be appointed as census workers. This is against Government regulations. The article states a subterfuge by which GOP officials will get around the intent and meaning of the law. Republican precinct committeemen will resign while they have a census job and then will be reappointed afterward. These census takers can make as much as $15.50 for an 8-hour day, plus car expense. Many of the Republican precinct committeemen are successful business and professional people and do not need the jobs to support their families. The article further states that Lee Brooks, of Fargo, Arlo Lindsay, of Mapleton, and Harry Wadeson, of Alice, are to make sure that only Republicans are hired.

This sounds unethical to me and like a scheme to get an army of Republican workers into every home in Cass County and get certain personal information, which census takers may get, and have it paid for by all the taxpayers. In addition, appointment of census takers purely as party politics is going to hamper the census. People will resent giving personal information necessary for the census if they feel the census taker might use the information for the benefit of any political party.

It shouldn't make any difference what party an unemployed person belongs to if he is qualified to do the job, and by giving him the job the entire community can benefit. In the face of the present unemployment situation of our Armour workers it is wrong to give these jobs to people who don't need them.

I am sending a copy of this letter to the members of the North Dakota congressional delegation and the Census Bureau in Washington, D.C.

NORMAN ANDERSON.

Letter From Gov. Orval E. Faubus to the Little Rock School Board

EXTENSION OF REMARKS
OF
HON. DALE ALFORD
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. ALFORD. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include a letter of enlightenment for those who are now speculating upon the reopening of the schools in Little Rock. This is a copy of a letter forwarded to the Little Rock School Board by the Governor of Arkansas, the Honorable Orval E. Faubus:

JULY 28, 1959.

Although I have received no communication of any nature whatsoever from the Little Rock School Board, I have noted from the press that the board, by a majority vote on a resolution, has challenged me to present any suggestion that I might have for a solution to the current segregation-integration controversy in the city. I do have definite and specific suggestions to make, and I am adopting this means of conveying these suggestions to you. However, in order to avoid any misunderstanding of my position, I am prefacing my suggestions with the following remarks.

Those who advocate the forcible integration of the schools on the theory that it is the "law of the land" have a very weak case, indeed. A citizen is bound no less by the laws of his own State than by the Federal law.

Our State constitution provides as follows:

"AMENDMENT NO. 44

"Section 1. From and after the adoption of this amendment, the General Assembly of the State of Arkansas shall take appropriate action and pass laws opposing in every constitutional manner the un-constitutional desegregation decisions of May 17, 1954, and May 31, 1955 of the United States Supreme Court.

"Said opposition shall continue steadfast until such time as such un-constitutional invasions or encroachments shall have abated or shall have been ratified."

This is the language of the 44th amendment to our State constitution, an amendment which was initiated by petition of the people, and adopted as a part of our State constitution by a large majority vote of the people at the general election in November 1956.

This amendment to our constitution has not yet been challenged in any court, and, therefore, stands today as the law of our State by the unquestioned will of our people.

Pursuant to this constitutional mandate from the people, the general assembly enacted and I approved early in 1959, Act 236, which reads in part as follows:

"Whereas the Supreme Court of the United States predicated its school integration decision upon the psychological effect of segregated classes upon children of the Negro race, and, at the same time, ignored the psychological impact of integrated schools upon certain white children who observe segregation of the races as a way of life; and

"Whereas legislation is necessary in order to protect the health, welfare, well-being, and educational opportunities of such white children: Now, therefore, be it enacted by the General Assembly of the State of Arkansas:

"SECTION 1. No person eligible to attend public schools shall be required to attend a school with students of another or different race in order to exercise his right under the constitution of this State to receive gratuitous instruction."

I attach great significance to the fact that as arrogant as the NAACP may be, it has not had the effrontery to attach the validity of this statute under the constitution of our State, or of our Nation. It is quite apparent that the agitators in this group and other integrationists realize that any attack on this statute will raise a question of the fact that they cannot successfully meet, and I refer to the "phychological impact of integrated schools upon white children who observe segregation of the races as a way of life."

Also, we have our Federal Constitution, and the 10th amendment thereto clearly states: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people."

Among these powers—the powers not delegated to the Federal Government, nor prohibited by it to the States, and reserved to the States, or to the people—is the complete and unfettered power of each State to control the public schools within its borders.

This amendment still stands and has not been repealed or modified by any subsequently adopted amendment to the Federal Constitution.

On the other hand, we have only a decision of he U.S. Supreme Court, based almost wholly upon theories of sociology and psychology found in certain books on such subjects, the principal author being Gunnar Myrdal, a Swedish Socialist. There was the merest passing mention of the 14th amendment to the Federal Constitution in the opinion filed by the Court.

Of the law of the land theory based on this decision, former Congressman Samuel B. Pettengill of Indiana recently wrote:

"But more important than integration or segregation is the preservation of the Constitution against the brainwashing of the American people now going on, to support the curious notion that a decision of the U.S. Supreme Court—any decision—is law."

It seems to me that it should be plain to any local, district, or State official as to which of the above more clearly reflects the will of the people of Arkansas, and which should be more binding upon him in his responsibilities as a public official.

It is plain to anyone that the great majority of the people of Arkansas prefer segregated schools, and they have that right under the Federal Constitution and the laws of the State.

Even so, it has been clearly demonstrated that the people of Arkansas will accept the freedom of choice, on a community basis, of either segregated or integrated schools. This is amply evidenced by the non-interference with the operation of integrated schools at Charleston, Fayetteville, and other places in our State.

In a large school district such as Little Rock, where the problem is more complex and difficult of solution, I believe the people would accept a plan of school operation based upon an individual choice between segregated or integrated schools.

This brings me to my first suggestion—a plan which I believe will come most closely to winning acceptance, and, thereby, bring about peaceful integration in the Little Rock schools.

I suggest that the school board ask all the parents who wish their children to attend integrated schools, or who will allow their children to attend integrated schools without undue objection, to come forward and so state.

After you have determined the number of students available for integration, as evidenced by the voluntary actions of their parents, assign half the White students to Horace Mann High School and half to Hall High School. Do the same with the Negro students. There would then exist two integrated schools, leaving the other facilities available for those students whose parents are unwilling to accept integration.

I predicate this suggestion on the following:

(1) It is clear that a majority of White parents do not desire integration (see vote results for special election of September, 1958.) Central High School has approximately three times the capacity of Hall or Horace Mann, thus meeting the requirement for more space for those desiring segregated schools.

(2) The facilities of Hall and Horace Mann are located in the areas where it has been clearly indicated that the most sentiment exists for the acceptance of integrated public schools.

(3) This will make available the newest and most modern facilities for the use of integrated schools, and will eliminate any possible complaint about the facilities of integrated schools. I believe those who observe segregation of the races as a way of life will be willing to accept the less modern, and, in some respects, inferior facilities at Central, in order to preserve their way of life.

I suggest further, to forestall the inevitable increase of moral problems which have always come with integrated schools, that the board send all boys to one school and all girls to the other.

Transportation will be no problem, because of the short distances involved; and, if necessary to use buses, the same vehicles can carry students both ways. In any plan of integration, the board will eventually face this problem. In New York, Philadelphia, and other integrated cities, students have been transported from the very door of one school to facilities miles distant, in order to bring about mixed schools in true ratio to racial numbers in the population of the whole area. Therefore, there can be no valid objections to the plan because of transportation difficulties.

As an alternative, in the event a substantial number of White parents do not volunteer for this plan, the children of the small number who do volunteer may be assigned to Horace Mann High School with the Negro students. It would then be unnecessary to assign any Negro student to any other school. All Negro students would be attending an integrated school. In the language of the U.S. Supreme Court, no Negro "would be separated from others of similar age and qualifications solely because of their race (which) generates a feeling of inferiority as to their status in the community that may affect their hearts and minds in a way unlikely ever to be undone."

No sincere integrationist can object to this plan—either to the integration of both Hall and Horace Mann, or to the integration of Horace Mann alone. They would be practicing what they preach—they would be demonstrating a live faith. For does not the Scripture teach that "faith without works is dead."

Any sincere integrationist must be willing to accept this plan, because it will afford an integrated status in the public schools for Negro students, and will avoid for Negro students the segregated status which, in the language of the U.S. Supreme Court, "has a detrimental effect upon the colored students."

This plan will not affect adversely any sincere segregationist in his immediate concern for his children. It allows full freedom of choice for all those of either viewpoint.

Such a plan will also afford a wonderful opportunity for sincere integrationists of both races to demonstrate to all by action and concrete evidence, whether or not any good can come from the integration of the races in the public schools. They should welcome the opportunity to show their faith in their viewpoint.

In the words of the great American jurist, Mr. Holmes, in one of his famous opinions, it will be an opportunity to set forth the fundamental truth—"that the ultimate good desired is better reached by free trade in ideas—that the best test of truth is the power of the thought to get itself accepted in the competition of the market."

I believe that the acceptance of this plan by the school board and the integrationists of Little Rock will bring about an immediate solution to this grave problem. Fear, uneasiness, and animosity should rapidly subside. With friction removed, the propaganda wars, boycotts, and counter-boycotts would almost immediately be forgotten. We would have reason to hope that the gulf of distrust and hatred which has been created between the races by the arrogance of the NAACP and the police-state methods of the Federal Government would begin to fade away.

I am convinced that any plan of integration—token, limited, or otherwise—which is evolved from the pupil assignment plan, or any other plan, which forces parents to send their children to integrated schools against their will, will have the opposite effect on the feelings and sentiments of the people.

Your public statements indicate that the school board intends to make use of our school assignment laws. The plan I have outlined can be executed within the framework of these two school assignment laws. I know that this plan is in keeping with the spirit and the letter of amendment 44 to our State constitution, and act 236, both of which, I reiterate, stand unchallenged by the integrationists.

Adoption of this plan—the voluntary integration of some schools, leaving a freedom of choice for all—could result in a permanent solution of this problem in Little Rock. The same plan could be carried step by step through all other grades in the public schools of Little Rock.

These suggestions do not indicate in any way any change in my attitude in opposition to the usurpation of the people's rights or the State's powers by the Federal Government. I have all along recognized the right of voluntary association. I have opposed and will continue to oppose association by compulsion. I will continue to defend the right of the State and its communities to control the locally and State-supported educational institutions. I hope the time will soon come when the Federal authorities will cease the illegal usurpation of State and local rights, thus relieving you and me, and the people, of burdens which are unnecessary—burdens cast upon us by a U.S. Supreme Court that has no respect for established precedent—a Court that has earned (by its disregard of our constitutional rights) a growing disrespect of the people of our Nation.

Respectfully,

ORVAL E. FAUBUS,
Governor.

The American Journey: The Trail to the Pacific Northwest

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 30, 1959

Mr. NEUBERGER. Mr. President, the July 1959 issue of Think magazine has been dedicated to the American journey, which began on July 4, 1776, and we trust will continue through the indefinite decades and centuries ahead.

One of the most thoughtful and provocative articles in this outstanding issue of Think magazine is entitled "Growth in the Northwest," and it heralds the resourcefulness and valor of the explorers and settlers who pioneered the Oregon Trail to the Pacific Northwest. The author of this article is one of our country's

most distinguished historians and collectors of folklore, Mr. Stewart H. Holbrook, noted Oregon author and fellow resident of my native city of Portland. In this centennial year for our State of Oregon, I ask unanimous consent that Mr. Holbrook's stirring article from Think magazine for July 1959 be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GROWTH IN THE NORTHWEST

(By Stewart Holbrook)

One of the most cherished myths of westerners is to describe this or that region where we live as a piece of the last frontier. We do it in the old Oregon country. It is a harmless brag, and it helps us to identify ourselves with the pioneers.

Time has made a desirable asset of pioneers. They stand fairly high in the Valhalla of national heroes. And if we of the Pacific Northwest have no *Mayflower*, our symbol comparable to the Pilgrim vessel is the covered wagon. It matters little that those wagons were not all covered, or that they were numbered by the many hundreds, or that they rolled westward continuously from 1843 until well after the railroad arrived. They have long since separately dissolved to merge into the classic vehicle.

Let it stand, this pioneer figure walking beside the covered wagon. He was seen in full stride by Francis Parkman, the historian, who made man and wagon into an image that has become an icon, fit for statues in parks and murals, in capitols and barrooms. The pioneer is useful in other ways. Chambers of commerce use him to immortalize the courage and determination with which the old frontier was imbued; while an unsuccessful real estate operator or industrialist can blame him becaue he "exhausted all our natural resources and opportunities." I often hear this complaint.

Yet, we still have our dreamers, men who hear trumpets blowing at dawn, who see the morning before it is scarcely light. They believe there is no end to opportunity, so long as man is free to dream. I shall come to them in a moment, but first let us not forget our dreamers of the past who conjured up the Northwest corner and called it the Oregon country.

Dreamers are difficult to dramatize for the history books, yet no doer had more influence on our region than Hall Jackson Kelley, a strange and dedicated prophet, the Lord's own messenger in respect to the Pacific Northwest when it was, at best, of doubtful sovereignty. At the time Kelley began to dream, in the 1820's, our region was virtually a trapping and trading preserve of the hoary Hudson's Bay Co. Clive of India himself was no more a spearhead of empire than these gentlemen adventurers in tartan caps seeking skins.

Yet, without asking anybody about it, Kelley, who had never been west of the Hudson River, suddenly felt called upon to cry, "On to Oregon"—then to organize the American Society for Encouraging Settlement of the Oregon Country. Until then, the few Americans who had been there were mostly sea captains; and, of course, the Lewis and Clark party. But now here was Kelley, an impecunious New England schoolmaster, to write and somehow publish a remarkable pamphlet calling for an exodus to Oregon.

His was no modest proposal. Kelley's Oregonians were to number 5,000 in the first wagon train. Five hundred trained and armed men were to compose a uniformed guard. He had the whole business planned; the organized groupings of the emigrants according to trades and abilities; the supplies and equipment; the discipline of the trail—everything. Above all Kelley's pioneers must be moral people.

Kelley's imaginative proposal and recruiting campaign, carried on from Boston headquarters, created a tremendous interest. It faded quickly when Congress, which he had petitioned for aid, remained cool. The press attacked Kelley, the bemused dreamer, with the ridicule so often used against unconventional characters, and his wondrous plan blew away into the mists.

It turned out, however, that Kelley had touched off a sort of apostolic succession of enormously effective doers. He had made a convert of young Nathaniel Wyeth, who promptly sent a cargo of goods around the Horn, then struck out overland to establish a trading post on the Columbia River. Though this specific venture was to fail, Wyeth in turn attracted Rev. Jason Lee, who accompanied him across the continent to found a settlement and mission school for the Indians. Lee also had some purposeful ideas. He soon showed up in Washington and presented to Congress a petition signed by a handful of allegedly American settlers in Oregon urging the recognition of territorial status. Nothing hapened just then, and Lee returned to Oregon, this time leading a party of 50 new settlers which went into history, significantly, as the great reenforcement.

Now the covered wagons began to roll, rutting the Oregon Trail so deep that portions of it can be seen more than a century afterward. Their numbers virtually assured American sovereignty of the region.

It was to be the longest trek in our history, this journey into the mysterious sinister void which the very maps designated as the Great American Desert of, worse, simply as unknown. Here was the biggest sun and the biggest moon in the biggest sky any had even seen. In their agonies of travel it came to seem as if both horizon and their goal beyond it were moving in unison, always keeping 10 miles ahead of them. The wind never ceased. Weeks on end it blew straight from the hottest corridors of the Equator, then shifted to blow from the top of the world.

There was the sun, and from the endless glare of that immense and hated thing there was no hiding place. Mirages danced and flickered, bringing a handsome blue lake, shimmering cold and inviting, only to sink into the ground. The wind, the sun, the savages. This unmarked road through the hell-wrought desert beat all manner of things out of and into human beings. Men and women displayed prodigies of courage and self-sacrifice to meet the almost daily crisis. The Sioux, the Blackfeet, were ever-present dangers. The worst threat of all was time. When one morning ice was seen on the waterhole, the emigrants knew something must be jetisoned, lest winter catch them in the mountains. Thus, the Oregon Trail was soon marked with fine old chests, with massive bureau and claw-foot tables. They were not discarded lightly.

THE PROMISED LAND

By the time the survivors reached their promised land, they were fit to cut the first logs, make the first clearing, plow the first field; they were ready to fight the first Indian war, to build the first blockhouse. All together, they took the wilderness in hand and from it carved out three great Commonwealths for the Republic.

In their wake came wave after wave of more pioneers, many with dreams to fulfill in this last frontier. Opportunity? No genuine pioneer, no matter the times he was born to, ever failed to recognize opportunity. Merely as a reporter I watched while a city was dreamed up and built, to shine like a star on the edge of night in the Douglas-fir immensity on the north bank of the Columbia. This was no housing development, but a real town which in 30 year grew to its present population of 30,000 people, and has become the queen of all lumber cities, anywhere—Longview, Wash.

Longview was founded on the startling proposition that timber is a crop to be harvested in cycles from a managed forest. It was a dream, an idea, so unique that its downfall and end were predicted regularly by nondreamers. But no longer. From Longview today comes not only lumber but an astonishing variety of forest products made from what, in former times, was called wood waste and destroyed as fast as it could be conveyed into the gigantic burners that were hallmarks of the sawdust cities of the era. The vast managed forest that feeds Longview's plants is harvested on a sustained-yield program. Growth equals cut.

America is always to build, sang the poet, and man will ever dream of man's fulfillment. One of these men was Billy Clapp who, when I first met him less than 30 years ago, was a short, plump, cheerful attorney who operated his law business, such as it was, from a two-by-four shack in the desolate, sun-baked hamlet of Ephrata in central Washington.

For many years, Lawyer-Dreamer Clapp brooded about Grand Coulee, the monstrous dry canyon in this desert. It was 1,000 feet deep in places, and some 50 miles long. "Why," he mused aloud one day, "why couldn't we build a big dam at the far end of her and make the Columbia run right down the Coulee to give us all the water we want?" In that remark was the genesis of the vast project that came to fruition more than two decades later.

Almost every American must have heard of Grand Coulee by now. Here in the midst of volcanic and glacial wastes, hundreds of thousands of acres are being made into lush farmlands that will astonish. It has come to pass that the mountains have dropped down new wine, that the hills flow with milk and honey, and all the rivers flow with waters. The visitor will invariably recall dim Biblical passages about oases, where the desert was made to blossom like the rose.

One looks and is prepared to believe that each of Grand Coulee's irrigation canals is longer than the Potomac—that the main canal alone could hold the flow of Niagara. When all the canals and laterals are completed, some years hence, they will stretch 4,500 miles. The Grand Coulee Dam also supplies power which, pooled with electricity from other Columbia River projects, is carried to all parts of the Pacific Northwest, including the great mysterious complex called Hanford Engineer Works, a corporate title which few if any other corporations can match in the way of euphemism; Hanford is where the United States makes the essence known as plutonium 239.

This is the same surging and once lonely river that moved an early poet, William Cullen Bryant, so powerfully. Some of his lines caught its majesty. They will be quoted so long as men remember the stream was formerly called the River Oregon—"the continuous woods where rolls the Oregon, and hears no sound, save his own dashings."

Woods and water. They have played mighty parts in the American dream in the Pacific Northwest. Longview and Grand Coulee will do as symbols, not only for our region but for all dreamers who like to believe America is never accomplished, that it is always still to build.

On Not Interfering

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 30, 1959

Mr. HIESTAND. Mr. Speaker, commenting on the most important bit of

legislation to face this or any other Congress within a decade, Henry Hazlitt in the current Newsweek stresses the tremendously important but unappreciated fact that the basic problem we face is entirely one of Congress' own doing. Under leave to extend my remarks these thoughts are herewith included.

ON NOT INTERFERING

(By Henry Hazlitt)

President Eisenhower has said that he will not interfere in the steel strike at this stage. And certainly he has not interfered in the sense, for example, that Mr. Truman interfered when he seized the companies in 1952 and tried to impose big wage increases on them. Mr. Eisenhower is ostensibly following a "hands-off" policy, to permit "free voluntary collective bargaining." Yet the Federal Government has been in fact interfering, and interfering every day, on the side of the union leaders and of greatly increasing the effectiveness and coercive power of a strike. It is interfering through the Federal labor laws already on the books (with the help of lack of local law enforcement against union coercion and violence).

The Norris-La Guardia Act, for example, in effect prevents employers or nonunion employees from going to the Federal courts for immediate relief from irreparable injury. Mass picketing is tolerated, and has proved in fact so intimidatory that the steel companies have not even attempted to carry on production in any of the six national steel strikes that have been called since the end of World War II. As one news item matter-of-factly put it a few dayes ago: "Any 'back-to-work' drive under company sponsorship would touch off picket-line violence of a type that has been unknown in the steel industry since the strikes of 20 years ago." Even in the present strike, picket lines stranded an estimated 500 supervisors in three Jones & Laughlin plants. The stranded personnel was made up of a standby corps to prevent deterioration of equipment, maintain essential utilities, and keep a fire watch.

COMPULSORY BARGAINING

Government interference, in fact, began long before the strike. The phrase "free voluntary collective bargaining" has become a mockery. The employer's bargaining is neither free nor voluntary. He is compelled by law to recognize and bargain with one specific union. No matter how unreasonable the demands of that union may be, he is forbidden to deal with anybody else with whom he might make a more acceptable voluntary agreement. This is a discrimination that the law does not make in favor of any other private group. It supplies corrupt or ruthless labor leaders with a weapon of extortion and shakedowns. Moreover, an officially recognized union, though it may originally have represented only 51 percent of a given group of employees, is legally granted exclusive bargaining rights for that group. This means that dissenting individuals or minority unions are denied the right of freely bargaining for themselves.

ONE MAN'S POWER

And so it comes about that one man, one private individual, has the power to bring practically the entire steel industry to a halt overnight. And other single individuals can bring the automobile industry, or the coal industry, or the aluminum industry, or the railroads, or the airlines to a halt. And then the country is helpless. There seems no way of ending the paralysis except by forcing the employers to give in, to grant the union demands, so that union leaders will permit us to start producing steel or aluminum or coal again. No way is even contemplated of resuming production without their consent.

The Government's impotence, of course, is of its own making. But what, meanwhile, does Congress do? It acts as if the whole situation did not exist. It is now tinkering with a labor bill that deals with none of the primary or central problems, but only with secondary and peripheral problems, and even for most of these it proposes the wrong remedies. Congress acts as if there were only one problem—the corruption of some labor-union bosses, or their excessive power over rank-and-file members. Any injustice or harm to nonunion employees, or to employers, or to the public is treated either as if it did not exist or as if it did not matter—as if nobody but union members had any rights that anyone was bound to respect.

This is the ideology behind present Federal law and its discussion. It forgets, finally, that industrywide unions cannot raise wages by coercive strikes except at the cost of bringing on either unemployment or additional inflation. The steel union did both by its strike in 1956.

Banks, Interest Rates: The Public Interest

EXTENSION OF REMARKS

OF

HON. GERALD T. FLYNN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. FLYNN. Mr. Speaker, who should have the power to determine policy when the welfare of our country is at stake? The Federal Reserve bank or the Congress?

The welfare of our country is at stake when we are threatened with an inflation which can consume all of us. To pay added interest charges on the public debt is inflationary. The Federal Reserve bank refuses to support Treasury bonds at the maximum interest rate now permitted. The Federal Reserve bank high-handedly rejects the advice of Congress when it suggests passing a resolution to the effect that it is the sense of Congress that the Federal Reserve bank support the bond market. The members of the Federal Reserve bank system were helped by Congress in 1933 and now, being beneficiaries of the fruits of the Federal Deposit Insurance Corporation, have declared their independence not only of the will of Congress but their rejection of even an expression of opinion by Congress on a money matter which has at stake not only the welfare of the banks but the welfare of the entire country and our economic system. If you believe, as I do, that fighting inflation through increased interest charges leads to a speedy and serious depression, and to an increasing spiral of inflation in other fields, then the advice and wish of Congress should be heard and heeded by agencies created by this Congress, such as the Federal Reserve bank. Yes, the private banks of this country should not be unmindful of the advice of Congress. Where the interest of the people is at stake, this Congress cannot afford to forfeit its power or influence or to compromise the people's convictions or principles. If we believe that the welfare of the people can be jeopardized through a rise in interest rates, through further inflation and by the failure of the Federal Reserve bank to support the current bond market, then I feel it is our duty, as Members of Congress, to refuse to knuckle under to those who demand increased interest rates. The well-being of the people of the country comes ahead of the well-being of the banks and money-lenders. Congress should protect the people and should not forfeit, even its right to express an opinion, to the banks who are hiding behind the sacred veil of a statement to the effect that banks should be free of the control of politicians. I say that it is our responsibility as Congressmen, politicians if you will, to protect the interests of our constituents who sent us here.

First the bankers wanted the Vault Cash bill—then the ceiling lifted on the national debt—then an increase in the interest rate on Government bonds and now they are bold enough to tell Congress, through the President, that Congress should not pass a simple resolution expressing its feeling that the Federal Reserve bank should support the bond market of the Treasury Department. The Federal Reserve bank has refused to buy Treasury bonds at the interest rate offered by the Secretary of the Treasury. We have, in effect, a strike by the Federal Reserve bank against the Treasury—a strike against the people of the United States.

Can any of us go home at the end of this session if we vote for an inflationary increase in interest rate and face the family farmer, the corner grocer, the white-collar worker, the laborer, the veterans, the teachers, and the pensioners living on fixed incomes? Let us forget about the hypothetical individual who states that the cause of the inflation is because Congress, or the Democrats in Congress, are spending too much. There is little difference between the spending bills of the Republicans and the Democrats. There is, however, a big difference between the policies of the Republicans and the Democrats. What we need is a balanced economy. If we have a balanced economy, a balanced budget will automatically follow. Let us vote in the interests of the people back home—let us vote against inflation by refusing to increase the interest rate on the national debt.

Cost of Producing Milk

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, July 30, 1959

Mr. WILEY. Mr. President, today the American dairy farmer still finds himself caught in a cost-price squeeze. Despite high costs of operations, equipment, taxes, and labor, the dairyman still receives a disproportionately small

part of the retail price of milk and milk products. For example, he may receive only 6 or 7 cents per quart for milk sold within 24 hours for 22–26 cents.

Despite a wide variety of efforts, it has not yet been possible to correct this situation.

A great many theories, of course, have been advanced as to just how this should be accomplished. Among these has been the idea of lowering the costs of production of milk.

As we know, these costs vary, depending upon a wide variety of factors, including: (1) herd size; (2) milk production per cow; (3) labor charge; (4) cost of feed; (5) efficient management; and other factors. Even though realistic efforts have been made to improve efficiency, however, the outlook has not sufficiently brightened.

DAIRY INCOME IN WISCONSIN

In 1958 Wisconsin dairy farmers received an average of about $3.11 per hundredweight for 3.5 percent milk at the farm. At this price, a 20-cow herd—averaging 8,000 pounds of milk per cow—would enable the farmer to pay current market prices for feed, cover production costs, return 4 percent interest on the dairy investment, but leave only 73 cents per hour for labor.

At such a price level, nearly one-half of Wisconsin's dairy farms did not receive enough income to cover all their nonlabor costs, including interest on investment, with no return for operator labor. Less than 10 percent paid all costs and returned $3,000 for the operator labor and management.

IS LOWERING PRODUCTION COSTS THE ANSWER?

The question arises, however: Is lowering the cost of production really the answer?

Naturally, it is advantageous for any individual farmer to lower his costs of operation. However, costs per unit are most effectively lowered by expanding production. If there is widespread expansion of production, the resulting volume of milk flowing into the market then has the effect of lowering prices that offset the gains of lower production costs.

Thus, while lowering the costs of producing milk is desirable for the individual farmer, it is not the whole answer; instead, additional efforts must also be made to attain more effective distribution and greater consumption—with the dairy farmer receiving a fairer share of the retail price of milk.

Recently, the members of the staff of the College of Agriculture, University of Wisconsin Extension Service, prepared a special circular entitled "The Cost of Producing Milk."

Recognizing that cost of production is one of the major factors that must be taken into consideration—if a successful effort is to be made for brightening the outlook for the dairy farmer, however, I ask unanimous consent to have excerpts from the circular printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

THE COST OF PRODUCING MILK

"How much does it cost to produce 100 pounds of milk?" This question is of widespread interest to farmers, farm organization leaders, public representatives, and consumers.

"What would dairymen have to get for 100 pounds of milk in order to earn for their labor the average weekly wage or hourly pay which industrial workers receive in Wisconsin?" This queestion is significant to those who believe that dairymen can reasonably expect as large a return on an hourly or weekly basis as factory workers.

Both questions are difficult to answer satisfactorily, because no single figure applies to all or to even a majority of dairy farmers. Yet these questions are being asked, and in response to them this analysis is made.

Production costs vary widely among individual dairymen. Many produce at less than the average cost for all dairymen—many others produce at greater than average cost. Production efficiency and size of operations are two important factors bearing on cost. Other considerations are the labor charge and whether the feed is home produced and charged at the cost of producing it or whether it is bought and charged at market prices.

Twenty cows producing 8,000 pounds of 3.5 percent milk per cow approximates the 1958 average Wisconsin dairy herd. If feed and all other items needed for milk production (exclusive of labor but including overhead interest, depreciation, etc.) as given by reliable research reports are charged at 1958 rates, the net cost per hundredweight of milk sold from this average Wisconsin herd is $2.22.

How is this cost arrived at?

First, all feed (including pasture) is charged at current local market price, rather than at the cost of producing it. Second, only those costs directly associated with the dairy herd and young stock are included. Third, costs are based upon requirements for this specific herd size and productive level, rather than upon farm account records. Average efficiency in the production of grade B milk is assumed. This method of determining cost permits viewing the dairy operation apart from the rest of the typical farm business, which includes raising crops and supplementary livestock.

The following costs are included, both for the milking herd and young stock: Feed at average 1958 market prices; bedding at 1958 costs; interest on the dairy investment (livestock, barn, dairy machinery and equipment) at 4 percent; depreciation on the barn, dairy machinery and equipment based on estimated useful life; taxes on the barn and livestock over 4 months of age at the 1957 Wisconsin tax rate; building and equipment repair costs; breeding, veterinary and miscellaneous cash expense.

Ignoring labor cost for the moment, the above items total $5,331 for this 20-cow herd plus young stock.

Deducting $1,952.60 from this total as the current value of veal calves and cull cows sold and manure available for field application, the net cost would be $3,378.40 for the herd. In turn, the net cost per hundredweight of milk sold (7,600 pounds per cow assuming 400 pounds are used for calf feed) is $2.22. In other words, the price of 3.5 percent milk at the farm (hauling costs are not included) would have to be $2.22 per hundredweight in order to cover operating costs plus interest on the investment, but with no return for labor. Costs of producing grade A milk might be somewhat higher.

WHAT RETURN FOR LABOR?

A 20-cow herd with typical facilities and average work efficiency require about 1,840 hours of labor per year. If labor is charged at $1.05 per hour (the average 1958 hourly wage for Wisconsin farm workers without room and board), the labor cost would be $1.27 per hundredweight of milk sold. Added to the other costs, this gives a net cost of $3.49 per hundredweight.

Actually the 1958 average price for 3.5 percent milk at the farm was $3.11 per hundredweight in Wisconsin. This is the average price for grade A and grade B milk sales. At this milk price, the average Wisconsin dairyman earned 73 cents for each hour spent on the dairy herd in 1958 plus 4 percent interest on his dairy investment.

Milk production costs can also be computed using industrial wages as the basis for the labor charge. The average Wisconsin industrial worker earned $87.53 per week in 1958 working 40.4 hours, or $2.17 per hour. If dairy labor is charged at the weekly industrial wage of $87.53 ($1.38 per hour assuming a 63.5-hour farm workweek), the net cost for this herd would be $3.89 per hundredweight of milk sold. Charging labor at the average hourly industrial wage of $2.17 would raise the net cost to $4.85 per hundredweight.

Calculating the cost of production on the basis of different annual labor incomes may be more meaningful to most dairymen than returns on an hourly basis. Labor income is the return for operator labor and management after all other operating and investment costs have been paid. Net costs for the average herd, assuming various levels of dairy labor income, are as follows:

Annual dairy labor income:	*Net cost per hundredweight milk sold*
$1,000	$2.88
$1,500	3.14
$2,000	3.54
$2,500	3.87
$3,000	4.20
$3,500	4.53
$4,000	4.85

The average price of $3.11 per hundredweight yielded, therefore, slightly less than $1,500 labor income last year for the average herd of 20 cows producing 8,000 pounds of milk per cow.

COSTS AT VARIOUS PRODUCTION LEVELS PER COW

Within a given herd size, the net cost per hundredweight of milk sold largely depends upon production per cow. Many costs (bedding, labor, etc.) are about the same regardless of production per cow with a given herd size. Therefore as total production rises, the net cost per hundredweight milk sold drops substantially.

Total milk production per cow:	*Net cost per hundredweight milk sold*
7,000 pounds	$3.93
8,000 pounds	3.54
9,000 pounds	3.24
10,000 pounds	2.99
11,000 pounds	2.79

The above table shows the importance of high-producing cows. The figures are based on the 20-cow herd with all feed purchased. The net costs listed represent the farm prices needed for 3.5 percent milk in order to yield $2,000 annual dairy labor income from the dairy enterprise (20 cows) plus 4 percent interest on the dairy investment, under 1958 cost conditions.

COSTS WITH HERDS OF VARIOUS SIZES

Herd size is another major determinant of net cost per hundredweight of milk sold. Again, fixed costs, particularly for the barn and equipment, can be spread over greater sales volume through herd expansion.

Net costs per hundredweight of milk sold are estimated below for herds of varying size. It is again assumed that all feed including pasture is purchased and that total annual

milk production is 8,000 pounds per cow. Labor is charged at $1 per hour to take into account differences in the amount of labor required. It is evidence that reductions in cost resulting from herd expansion are most pronounced with the smaller herds.

Number of cows:	*Net cost per hundredweight milk sold*
10	$4.78
15	3.88
20	3.43
25	3.16
30	2.99
35	2.86

COMPARING HERD SIZE AND PRODUCTION PER COW AS UNIT COST REDUCERS

Which offers the average dairyman the best chance to reduce costs, increasing herd size or increasing production per cow?

The diagram indicates that the average Wisconsin dairyman can cut his unit costs more by improving production per cow than by expanding herd size even with no charge for labor.

If a labor charge based on requirements is added, better herds become even more attractive than larger herds for cost reduction.

Nevertheless, as previously shown, both are good ways to reduce unit costs. In fact, on the average, the larger Wisconsin herds also have higher production per cow. Thus they benefit from the twofold income advantage of lower unit costs and greater sales volume.

SOME FARM RECORDS

Production costs on selected Wisconsin farms

The relationship between volume and cost for milk sold from 400 Wisconsin farms in 1957: These farms, mostly grade A, averaged 35 cows with 9,500 pounds of milk sold per cow. Costs per hundredweight decline with expanded milk production throughout the range of production found on these farms. The cost reduction possibilities are most pronounced at lower production levels.

This does not mean that volume alone is important. Volume obtained from a large herd of low producers would come at much higher cost than shown here. On the average, however, size of herd and production per cow increase together on Wisconsin farms so they can be combined into the single measure of "production per farm." Efficient feed production is also found more commonly with higher levels of milk production.

All cash operating expenses are taken from these actual farm records. They include only operating expenses (not living expenses) and only the farm's share of electricity, automobile and other joint costs. In contrast with the figures presented earlier, the costs given in this section are based on the entire farm operation; this includes the cost of producing feed rather than buying it. It also includes hauling costs, the cost of produce used in the home and the cost of providing the house.

The investment costs are interest on all capital (including owned capital) and depreciation on buildings, machinery and equipment.

Labor costs include the actual cost of hired labor, the value of unpaid family labor and a labor income of $3,000 for the farm operator. This $3,000 figure is sometimes used to approximate a labor income equal to that of the average industrial worker when allowance is made for use of the farmhouse and farm produce used in the home.

WHAT'S THE ANSWER?

Cost of production as basis of pricing milk

Much of the interest in milk production costs stems from the belief that milk prices should be set at the average cost of production plus some reasonable profit margin.

The idea of pricing any commodity on the basis of its cost of production implies two basic assumptions: (1) production costs are sufficiently uniform that the average cost would apply to a major portion of its producers, and (2) the amount produced at such a cost price could regularly be sold and consumed.

The second assumption would not ordinarily occur without monopoly elements which make it possible to control total production. In fact, an increase in the price of milk would decrease somewhat the amount that the market would take and would certainly not reduce the amount produced.

The first basic assumption is essentially that a milk price established at the average cost of production would give good incomes to most dairy farmers.

But in Wisconsin an average cost would apply only to a very few dairy farmers. Most are above or below the average. Hence, if the price of milk was set at the average cost of production, most dairy farmers would either still not earn an acceptable income or earn significantly more than the acceptable level.

What about lowering costs?

If pricing milk on cost of production is not acceptable one might ask, "Why not solve the problem by lowering costs?" It's a good thought, but it has serious complications as a single "solution."

It is to the definite advantage of any individual farmer to lower costs. However, costs per unit are reduced most easily through expanded production. If all farmers expanded milk production, the resultant price reduction could more than offset the benefit of lowered unit costs.

Even so, there are limits to how fast and effectively Wisconsin dairy farms can adjust to achieve lower costs. Many dairymen are limited by available capital, management ability and other considerations such as age, nonfarm work, etc.

Others can and are moving out into the lower cost range. For example, the proportion of Wisconsin farms producing 150,000 pounds of milk or more per year increased by almost 25 percent from 1954 to 1957. This expansion is very rapid, but it still leaves many dairy farms in the relatively high cost positions.

The dairy income dilemma

Dairy farmers, as well as farmers generally, are faced with the need to increase production in order to improve their income through lowered unit costs and greater sales volume. But if all farmers accomplish this, the resulting price decline can more than offset the gains made. This is the dilemma confronting the Wisconsin dairyman.

Edmonds Harbor Deserves Help

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. WESTLAND. Mr. Speaker, the Committee on Public Works has approved a resolution which authorizes the Chief of Engineers to determine the feasibility of a small-boat harbor at Edmonds, Wash.

This review survey has been delayed because of a lack of funds. I believe every effort should be made to get the survey started, particularly in light of an independent study by the University of Washington. I hope the Bureau of the Budget will release any available funds for the engineers review study during the current fiscal year.

The Lynnwood (Wash.) Enterprise published a news story July 15, 1959, which tells of the difficulty faced by the port of Edmonds in getting Federal aid. Under leave to extend my remarks I include the story in the RECORD.

The story follows:

UNIVERSITY OF WASHINGTON SURVEY FAVORS EDMONDS BOAT HARBOR

Edmonds port commissioners heard a favorable report this week on prospects for a boat harbor in Edmonds. Paul Flint, of McClean & Co., Inc., added his opinion that the boat harbor would have a good chance for 100-percent occupancy and that there is a very good chance to put it over.

The University of Washington preliminary survey, conducted by Prof. Don Parker, recommended that the port of Edmonds should construct a pleasure boat harbor, that dry storage space should be provided, that serious consideration should be given to satisfying a demand for covered space, that the port of Edmonds should make subletting of mooring leases a part of the yearly contract, that self-sufficient facilities such as a restaurant, and gas and oil concessions should be provided, and that necessary facilities such as fresh water, electrical outlets, and restrooms be made available.

The survey further disclosed that a minimum of 820 boatowners can be expected to sign mooring leases, and that a maximum of 2,328 boatowners could be expected to sign mooring leases.

Paul Flint told the commissioners that an Edmonds boat harbor, financed as proposed, solely by the issue of revenue bonds, would be only the second in the country to do so.

The port commission faces a 1962 deadline from the Union Oil Co., and for that reason agreed that Federal aid would arrive too late to help with the harbor financing. Congressmen sent the Edmonds boat harbor a telegram that the Senate Appropriations Committee recommended a $476,000 increase in navigation surveys, and that action was expected soon. Commissioner Scott said that 10 years had already been spent in efforts to get such Federal aid.

The port commission received a complaint regarding misuse of the float by fishermen who become belligerent when boats try to tie up at the float. The commission stated that the float is intended primarily for the use of boatowners, and that if fishermen continue to disregard its proper use, the commission will act jointly with Edmonds police to enforce freedom of the float for boatowners.

Mr. Speaker, also I want to include in the RECORD an editorial that appeared in the Edmonds (Wash.) Tribune-Review on July 16, 1959. This editorial points out the demand for the small-boat harbor and the action taken by the port of Edmonds to get the project started. Anyone who reads the news item and the editorial must come to the conclusion that the people of Edmonds deserve Federal help in getting this harbor.

The editorial follows:

WHERE THE BOAT HARBOR STANDS NOW

The survey just completed for the Port of Edmonds by the University of Washington Marketing and Research Bureau pretty much confirms what port commissioners have felt all along—that there is enough demand for a small boat harbor here to fill every moorage space as soon as it is built. If that is so, people often ask impatiently, why in heck don't they go ahead and build it?

The answer can be wrapped up in one little word—money. That's all, just money.

To get that money, the port commissioners have now completed two steps. First they called in a firm of financial analysts to study all the costs and revenues which would be concerned in the operation of a small boat harbor, and determine if it would pay its way. The firm concluded that given a reasonable degree of occupancy, it would.

Next the port commission engaged the services of an experienced and accepted surveying service to make a scientific study of the potential customers of that boat harbor, to determine if the leases would reach the number which the financial analysts say would make it pay. That report, summarized on our front page, says that they would.

Now the port commission has turned all this information over to a bonding company to see if it considers that it is solid enough to persuade bond buyers to invest in it. Up to now, it looks good. But from here on out, the port commission is in the position of anyone who goes to a financial firm for a loan—the lender wants to be pretty sure of the borrower's prospects for paying back the money.

Right at this point, whether or not a small boat harbor is built on the Edmonds waterfront depends entirely on how good a case has been made to the cold and calculating eye of the bond buyer.

Economy and Finance

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Thursday, July 30, 1959

Mr. HART. Mr. President, on Friday I submitted Senate Resolution 150, proposing the creation of a select Senate committee on the economic impact of the defense program. In a column published in the Washington Evening Star on the following day Saturday, July 25, Sylvia Porter discussed the possible problems arising from changes and adjustments which might occur in our economy if defense spending was gradually to be cut. She has set forth the importance of the subject quite forcefully.

I ask unanimous consent that her column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star, July 25, 1959]

HOW'S IT GOING TO END?

(By Sylvia Porter)

Increasing numbers of us are playing a "game" around the lunch and board room tables in Wall Street today which is guaranteed to cause shivers on the hottest day. We call it:

"How's it going to end this time?"

The rules for the mental exercise are simple.

First, we quickly agree that the stock market has been in a spectacular upswing and that while none of us knows how high is high, many stocks do appear fully priced. We also note that financial relationships have become quite abnormal when an investor can get a much higher income from a short-term Treasury security than from lots of top-rated stocks.

Second, we quickly agree that the shock which will trigger the next stock market break will not come from a direction we expect. As always, most people will be caught off guard.

Then, we put the question on the table: "What could be the development that will send stock prices into a slump this time?"

One answer which professionals are mentioning more and more is: An unanticipated acceptance by the West and the Soviet Union of a plan encouraging both sides to limit defense expenditures. It would mark a start toward leveling out of the $41 billion military budget and toward gradual cuts over the coming years.

This acceptance would be properly hailed throughout the world as progress toward sanity. But, in Wall Street the pros would concentrate on the extent to which a ceiling on defense spending might cause dislocations in industry, major layoffs, and pay slashes—and the stock market well might shudder at what could happen.

Putting it bluntly: A glimpse of peace and future relief from the load of armaments spending could be "it"—the trigger.

Cynical? Sure. The pros, though, emphasize how even the modest stretchout in defense spending in 1957 chilled the economy and paved the way for the 100-point stock market break in late 1957.

At this point in a "game" session this past week, I exploded.

"I won't take the insult to our intelligence you imply. We know what should be done to fill the gaps created by any big cut in defense spending and we can take every step needed.

"We should put through instantaneous tax cuts to release spending cash into the hands of consumers and businessmen. We would start at once on the programs we all admit are desperately needed for more schools, water systems, roads, middle-income housing. We would at last begin a real drive for redevelopment of our cities.

"We can develop practical programs to aid specific industries and areas through the transition. An improved unemployment insurance program would be of vital help. So would a return to easy money."

The men around the table listened politely, but as I halted for breath, back came the cold comments:

"But the programs you suggest are not on the books. The public hasn't confidence they will be put there in time. No effort has been made to convince Americans that what is needed will be done to prevent a transition to lower defense spending from being cruel and severe."

And as I protested, the men continued with the "game" and the warning to each other that unexpected "peaceful" developments might be the shocker setting off the slump this time.

A New Look for the Solid South

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. WILLIAMS. Mr. Speaker, an excellent article recently appeared in the July 1959 issue of the National Republic magazine, which should provoke a great deal of thought among our national political leaders. This article was prepared and written by our distinguished colleague from Mississippi, Hon. WILLIAM M. COLMER, and expresses, I am sure, the sentiments of a vast majority of the people of the Southern States.

Under leave to extend my remarks in the Appendix of the RECORD, I include this article and commend it to the House:

A NEW LOOK AT THE SOLID SOUTH—THE ELECTORAL PLAN ADOPTED BY SIX SOUTHERN STATES IS NEITHER REACTIONARY NOR CONSERVATIVE BUT A RETURN TO THE CONSTITUTION

(By Hon. WILLIAM M. COLMER)

The electoral plan promulgated by six Southern States has been called the newest brainchild of reactionary states righters. I take exception to the words "newest" and "reactionary."

There is nothing new about the idea. It is as old as the Constitution of the United States. In fact that is just where the idea originated. It was the brainchild of the Founding Fathers—their idea as to how presidential elections should be conducted.

The men who shaped the framework of our Nation believed that to be an elector was to be something more than a mere rubber stamp. They confidently expected electors to be chosen as carefully—and as critically—as any legislator. Electors were to be men of unquestioned integrity, fully aware of the sentiment of their State, and ready to put that sentiment ahead of mere party loyalty.

Had there been a deviation on the part of the candidate around election time—after nomination—or were he shown to be under the influence of some group inimical to the best interests of the State represented by the elector, that elector might change his vote at the very last moment.

In fact, the reason for the electors was to implement the very freedom of choice of Government officials for which the United States was founded.

Listen to the original words of the Constitution and you will see that this so-called newest brainchild of reactionary states righters is but a return to the Constitution of the United States with all of its safeguards against individual or mass tyranny. Article II, section 1 reads:

"Each State shall appoint, in such manner as the legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress. * * *

"The electors shall meet in their respective States, and vote by ballot for two persons. * * * The person having the greatest number of votes shall be the President, if such number be a majority of the whole number of electors appointed; and if there be more than one who have such majority, and have an equal number of votes, then the House of Representatives shall immediately choose by ballot one of them for President; and if no person have a majority, then from the five highest on the list the said House shall in like manner choose the President.

"But in choosing the President, the votes shall be taken by States, the representation from each State having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the States, and a majority of all the States shall be necessary to a choice.

"In every case, after the choice of the President, the person having the greatest number of votes of the electors shall be the Vice President. But if there should remain two or more who have equal votes, the Senate shall choose from them by ballot the Vice President."

The 12th amendment made a change in this procedure. Under the original electoral provision the electors voted for two persons; without designating either for President or

Vice President. But the election of 1800 pointed out a weakness. In that election Jefferson and Burr received an equal number of votes and 35 ballots had to be taken in the House of Representatives before the choice fell to Jefferson. The 12th amendment requires electors to vote separately for President and Vice President.

But in neither the original proviso, nor in the amendment, is the elector barred from voting as the thinks best.

As for those ultraliberals who invariably link States rights with reaction, may I suggest a closer study of American history.

They are inconsistent, for they talk of civil rights as though they had invented rights, and, with their next breath, they urge any one of the socialistic regimentations which have so cut into our individual liberties guaranteed by the Bill of Rights.

It was the States righters who promulgated the Bill of Rights. The fight for this cornerstone of all of our liberties did not stem from the northern industrial States, but from the South.

It was at the Hillsborough Convention in 1788 that North Carolina refused to ratify the Constitution until there was incorporated in it a Bill of Rights that would preserve forevermore those inherent freedoms for which the States had fought.

It was the gallant stand of men who believed in the individual American and in his ability to do his own thinking, that preserved and protected the freedoms which we still enjoy—and upon which the radicals in our midst call for aid whenever they are exposed to the public eye.

The States righters of those days—and of today—believed that there should be no loophole for tyranny—whether of the man or the State. If to believe that is reactionary, then I am proud to be so called.

When the United States of America was formed and the Constitution was written, the people of the several States were insistent and demanding that local government be forever preserved in all of its dignity and with all of its safeguards.

The Constitution specifically provided for the right and authority of each State to conduct its own affairs and that this should be preserved inviolate. There was conferred upon the Federal Government only so much power and authority as was necessary to control the relationships of the States, one with another, and the conduct of the Nation's foreign affairs and unified defense.

Even so, out of an abundance of caution, the States refused to ratify the Constitution until they had received further definite and positive assurances that this fundamental concept of government would in deed and in fact be set up. The result was the first 10 amendments to the Constitution—the Bill of Rights.

The Bill of Rights consists of two kinds of guarantees: guarantees of the rights of individuals, and guarantees of the rights of the several States.

The greatest danger to our rights and liberties arises from the tendency to merge our dual system of government into one single, consolidated system. This tendency already has, to a large degree, destroyed the Federal principle, and is, in many ways, converting the States into compliant, dependent and parasitic subdivisions of the Central Government.

The answer given by proponents of big government is that it promotes material welfare and expedites foreign relations. It is, in fact, nothing less than an abdication of constitutional government in favor of tyranny. No matter under which party label it masquerades and out of which emergency it arises, it is contrary to the spirit and letter of the Constitution, abhorrent to American traditions and principles, and subversive of religion, culture, and the freedom and responsibility of the individual.

As complex as are our social and economic problems of today, social and economic justice, desirable as they are, cannot be attained or safeguarded by violation of the Constitution. Only a strict adherence to the Federal Constitution and the constitional rights of every State and individual will assure economic and social justice.

The problem facing the electorate in 1960 will be this: How much larger in size and in function will we allow the Federal Government to become? Is the Federal Government to establish the spiritual, economic and cultural conditions under which the several States wish to live? If the answer in a strict constitutional and American sense is "no," then each State must, under the Constitution, retain full control of education, police power, use of the ballot, marriage, transportation within its own borders, health, welfare, and all such matters as provide for peace and good order within the sovereign States.

Federal invasion of these States' rights must be brought to an emphatic halt. This includes usurpation by the Federal executive, or by the Congress, or by the courts through judicial legislation.

The real division today is not between the Democratic and Republican Parties, but between the modern Republicans and the radical Democrats on one side, who hold that we must submit our freedom and fate to a government which, whatever its name or label, will be but a species of national socialism, and those men and women of both parties who believe in the freedoms as originally intended and actually written into the Constitution.

What then is the answer?

There is already in being the legal machinery in six Southern States which may offer a solution. The legislatures of Alabama, Arkansas, Georgia, Louisiana, Mississippi and South Carolina have rewritten their own State election laws, in such a way that the names of presidential candidates may be left off States' ballots in 1960. These six States have a total of 57 electoral votes, which in a close election on November 8, 1960, might well force the election of a President and Vice President into the House of Representatives under provisions of article II and amendment 12 of the Constitution. Also this legal machinery might well be used by the South in advance of the 1960 election to influence the choice of a nominee.

If the five other Southern States follow the lead—Florida, North Carolina, Tennessee, Texas, and Virginia—the South will have a bloc of 128 electoral votes—almost half the number needed to elect a President. The votes in the six States now, and in others that may take similar action before the election of 1960, will not be pledged to support the Democratic candidate when they cast their electoral college vote. These votes could be cast for the other major party candidate or for any other candidate. Thus, the Democrats could carry the South and yet the Democratic Party machine could lose the election.

The framework is simple, legal, and has a solid historical perspective back of it. In the States already providing legal machinery for this, the presidential electors would be placed on the ballot as unpledged electors of the Democratic Party, but not pledged to support any presidential candidate. There would be no moral obligation to support the national candidate of the party, although they would be bound by the actions of the executive committee of the State Democratic Party.

After the votes are counted and the results made known on November 8, 1960, it will soon be known how close the election is, and whether or not a shift of unpledged electors might rob the majority of the election, causing the House of Representatives to elect a President.

Much bargaining and "horse trading" could go on meanwhile, before the actual electoral votes were cast. The prize could well be a more "conservative" President and a victory of the prized principle of States rights. In short, it might well mean a return to constitutional principles.

The answer is political independence. In spite of President Eisenhower's tremendous popular victories, the Republican Party is still a minority party. Political independence for the South provides the South once again with its great opportunity to not only save our basic institutions but also to perpetuate the cherished Jeffersonian principles of government in the Republic itself, by militant, peaceful, and aggressive action in the Democratic councils and conventions.

Disliking as I do government by minority groups, the time has arrived when the South must, of necessity, follow one of three courses: Remain in the bag and be counted on to go Democratic under all conditions; become an independent two-party section and thus appeal to vote-hungry Republicans; or become an organized militant minority group in itself. There is too much at stake for the South to continue to afford the luxury of being taken for granted. The South cannot stand idly by and watch its cherished Democratic Party be controlled by NAACP, AFL–CIO, ADA, and the like.

If this plan is adopted and carried through in 1960, the South will play once again a glorious role in the political arena of this Nation and States rights will have been preserved for all the States—both North and South. This plan is a call for an organized militant southern unity within the Democratic Party for the cause of individual and State liberty of all the peoples of this Republic.

The issues for 1960 are crystal clear. No one ever despairs of Americanism when the issues are clearly drawn. Americans have risen up before and saved the Union of States. The people still believe that this Nation will live forever if the people retain control of their government. The heart of America at the grassroots is strong and dead set against big government. The trouble has been, and is, that they do not know what they as individuals can do about it. The South has a basic answer to these wishes of the people. Out of it all the Republic itself will be perpetuated.

M. L. Benedum, a Great and Good West Virginian, Has Passed Away, Leaves a Lonesome Place Against the Sky

---

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 30, 1959

Mr. RANDOLPH. Mr. President, in this forum 2 weeks ago I observed that on Thursday, July 16, Michael L. Benedum would sit quietly in his living room reading congratulatory letters on his 90th birthday anniversary.

But today, Mr. President, the same Mr. Benedum, an outstanding native West Virginian, who enjoyed a fabulous career as the most successful oil wildcatter in history, and who also possessed the great quality of maintaining concern and compassion for the well-being of his fellowman, passed to the greater reward.

In response to an inquiry from Editor Randal Strother of the Clarksburg Exponent, Clarksburg, Harrison County, W. Va.—the county in which Mr. Benedum and I were born and in which his philanthropic gifts have exceeded $2½ million—I issued a statement today on Mike Benedum's passing.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD my statement as released to the Exponent.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR RANDOLPH

M. L. Benedum traveled the extra mile to build successes of both his business endeavors and his philanthropic activities.

Possibly no native West Virginian had a more outstanding industry career. He was creative and courageous but, more importantly, he was considerate of the needs of his fellow men.

No one typified to a greater degree his quality of Christian citizenship.

Mr. Benedum was a firm believer in the philosophy that man is only temporarily a trustee of the wealth acquired through God-given talents. Consequently, he had a real awareness of his Christian responsibilities.

The fruits of his labors were wisely and frugally conserved, and it was properly said of him that only of friendship and good cheer was he a spendthrift. Great though he was in the industry which endowed him with much wealth, Mr. Benedum will best be remembered for the generosity of his gifts of time, energy, and worldly substance to the church, to education, and to philanthropy in general.

From my youth, and during my private and public service, his dedicated life has been my personal inspiration.

Peoria Journal Star Editor in Russia

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 30, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I wish to include the seventh in a series of articles by Mr. Charles L. Dancey appearing in the July 26 issue of the Peoria Journal Star. Mr. Dancey is the editor of the paper and is reporting on his recent trip to Russia.

NOTHING IS FREE FOR PEOPLE IN SOVIET UNION

(By Charles L. Dancey)

Communism certainly doesn't mean a lot of free service for folks. Almost nothing is free in the Soviet Union under its Communist regime.

It is true that a great many things are "furnished" by the Soviet Government, but whenever you get in touch with an ordinary citizen who has used this service you discover it was furnished by the government, all right, but at a price.

Throughout the Black Sea area are great "sanitoriums" for ailing "workers" and the Communists make a big thing out of the fact that these magnificent buildings were once the homes of rich nobles that now have been turned over to the use of the workers.

A sanitorium user, however, will tell you that it costs 1,400 rubles a month for a bed there and that he must pay one-third of it. His trade union pays the other two-thirds.

Then, if you inquire where the union welfare fund comes from you discover that the worker automatically pays 6 percent of his wages to the union every payday. That's it. A mighty high cost for such sketchy insurance.

Another of the functions about which much has been said and written, and for which the Communists have often been praised, are their nursery schools which free mothers from care for many hours and serve as preschool training.

But nowhere have I read or heard—until I inquired on the scene of Soviet parents—the plain fact that this great service furnished by the state, costs the parents 100 rubles or 130 rubles a month. (The person who said he had to pay 130 rubles explained this was his fee because his wife also worked).

I was told the students at the Institutes or college levels have dining rooms and dormitories furnished, usually in the same building where instruction is given. I assumed this was all free.

I don't know, though, since the person who was describing these glories to me went a step farther and announced that if a student has full marks and is a needy person, he may get a stipend or scholarship from the government.

This being a society where everyone not only has a job but must have a job, and where all wages are supposed to be adequate, I asked the straightforward, obvious question—what is considered a needy student?

"An orphan," was the blunt reply. "Maybe both parents were killed in the war. Like that."

This doesn't sound like free education to me. (On the other hand, if a student doesn't have full marks he cannot go to college under any circumstances. His future is settled for good at age 14 or 15.)

Even in our own materialistic, capitalistic society you can walk into the Government's fabulous Smithsonian Institution or National Art Gallery without reaching in your pocket. Not so in the Soviet Union. There is an admission charge for everything including national museums and art galleries.

The only thing that I'm sure is really free in Russia are the public parks—and if there is entertainment there, the gates will be closed and admission charged there as well.

Clinic treatment by doctors may also be free. I don't know. I do know that they say you can get the doctor you want if you pay enough—and I was also told on very good and reliable authority that the proud boast that 80 percent of the doctors are women is not as it sounds.

The fact that the doctors are terribly overworked and terribly underpaid, there being a shocking shortage of men in the Soviet Union, well-educated men who prefer other duty generally get their preference. Hence, few men doctors. They don't want to be.

There are many such surprises in the Soviet Union for the visitor who asks simple questions of ordinary people.

Integrity Makes News

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, July 30, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a fine article published in the Washington (D.C.) Daily News, of today, July 30, 1959, written by John Herling, praising Eric Peterson, secretary-treasurer of the Machinists Union, who has served his union and the public with integrity and distinction.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INTEGRITY MAKES NEWS

(By John Herling)

Organized labor has been placed on the defensive so long by certain revelations of the McClellan committee investigating improper practices that frequently union spokesmen do not appear to have energy left for some positive thinking.

Although Senator MCCLELLAN has sought to assure the country more than once that the great majority of union men are "fine upstanding Americans," almost nobody has taken time out to get down to cases.

This reporter believes integrity makes more significant, if less spectacular, news than skulduggery. For me and for other observers of the labor scene, the symbol of character in action, one who spoke for and administered his union without fear and without reproach, is a man named Eric Peterson.

Eric Peterson is no noisemaker, and no newsmaker, either, in the conventional sense. He is secretary-treasurer of the Machinists Union, with 900,000 members, one of the largest in the United States. His whole life has been a union life. For him the union has been the base from which flowed great concern for the needs of the whole community, in its broadest meaning.

I am talking about Mr. Peterson for a special reason. He is going to leave his union post next month when he reaches 65, the age of compulsory retirement from a working life which began in Teddy Roosevelt's day.

The Peterson story is typically American because Eric is American by choice, so to speak. At 10 he came from Sweden with his mother to join his father, a "real boot and shoe craftsman," Eric says, who had settled in Rawlins, Wyo., 2 years before. Young Eric sped through school and soon was doing what came naturally to poor folks 50 years ago, he began to work. He started his apprenticeship as a machinist in a railroad shop.

Eric continued to train himself through independent reading and endless debates on political and social issues, the give and take which sharpened the minds of generations of union men. In 1911, came the strike on the Union Pacific, the Harriman line. In that day and age, when you went on strike, you took your job in your hands. Young Peterson became a marked man. He was blacklisted by the company.

He moved on to Deer Lodge, Mont. He was elected an officer of the local machinists lodge. He became machinists' delegate on the Milwaukee line which ran from Chicago to the Pacific. People began to know him as a straight shooter, a man of simply stated principles.

Then he took part in the famous 1922 railroad shopmen's strike. This was a dispute over management's effort to cut wages. Mr. Peterson recalls it as a long and bitter strike, which the unions lost. "It was worth the sacrifice," he says. "We stopped the wage cutting. Only old Dan Willard, then president of the Baltimore & Ohio, arranged to have the union men go back to their jobs with their honor and union intact. The others started company unions."

In craft unions, recognition usually comes slowly, but once given, it sticks. Nothing nails a man faster than being too big for his britches. But Eric became known as a man who helped his union grow and grew with, and not past, his union.

Machinists secretary-treasurer since 1944, Mr. Peterson's conduct of his offices was strict and straight. Grief came to him once. About 10 years ago, a trusted employee was found to have been stealing payroll funds. There was no hesitation on the union's part; the man was convicted. But, the incident of misplaced trust almost shattered Eric. As a responsible officer, he wouldn't duck. He insisted on taking responsibility. Even more, he believed his stern sense of duty required him to resign.

He went before the union convention, gave a complete, unvarnished report and offered his resignation. The tension in the hall was almost unbearable. Then the silence was broken as if by a deep sigh. One rank-and-file delegate after another arose to tell Eric, sitting on the platform pale and quiet, that they wouldn't hear of his quitting. The convention became a meeting of solemn dedication. The vote of confidence became a roar of appreciation. On the platform, Eric wept. It was a great moment for him, perhaps even greater for his union. For the assembled delegates knew that without Eric Peterson, the trade union movement would shed bitter tears.

The Bentley Bill, H.R. 2729

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by George J. Burger, vice president of the National Federation of Independent Business, Washington, D.C.

The statement treats the Bentley bill, H.R. 2729, which would require manufacturers to maintain equal prices in sales to independent retailers and company-owned stores.

The statement follows:

The Department of Commerce has a new "two-way look," according to George J. Burger, vice president of the National Federation of Independent Business. "And the style doesn't look good for the Nation's 4 million independent businessmen," he added.

Burger spoke out today against the Department's endorsement of legislation which would provide auto dealers with territorial security and its stand on the Bentley equal pricing bill, which they stated: "is diametrically opposed to the present antitrust and business practice laws and philosophy."

"The Department of Commerce is looking in both directions. The two-way look comes from their reaction to the Bentley bill—H.R. 2729—which would strengthen already existing antitrust laws, and the territorial security legislation which would weaken present antitrust philosophy." The territorial security legislation is now pending before the Senate Interstate and Foreign Commerce Committee, while the Bentley bill is pending before the House Interstate and Foreign Commerce Committee.

"It would be interesting to find out," Burger said, "why Commerce favors legislation permitting auto manufacturers to allocate sales territories to dealers, an idea which already has been vigorously opposed by the antitrust agencies."

"And then, at the same time, the Department of Commerce registers opposition to the Bentley bill—H.R. 2729—which has as its basic purpose fair and equitable treatment for the independent retailer."

The Bentley bill would require manufacturers to give equal prices to independent retailers and company-owned stores. This would affect merchants in the many concentrated industries.

North Dakota Summer Drama Needs Vocal Support

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, July 30, 1959

Mr. YOUNG of North Dakota. Mr. President, North Dakota has many assets. It offers as much or more opportunity as perhaps any State in the Nation. Far too few people realize that North Dakota is one of the most interesting vacation areas in the United States. It is a paradise for hunters. Its highly developed agriculture makes it a garden spot of the world in the summertime.

The scenic Badlands in North Dakota attracted no less a personality than the late President Theodore Roosevelt long before the turn of the century. It was in the Badlands that Theodore Roosevelt established a ranch and became one of our most loved and repected residents.

One of the greatest attractions for tourists is the theatrical production playing almost nightly in the beautiful Burning Hills Amphitheater at Medora entitled "Old Four Eyes." This production depicts the life of Theodore Roosevelt in the Badlands. Thousands of tourists have stopped to enjoy this expertly presented and interesting drama.

Another very interesting drama being played nightly in North Dakota is "Trail West" at Mandan. This depicts the story of General Custer from the time he left Fort Lincoln near Mandan until his ill-fated battle with the Sioux Indians at the Little Big Horn.

Mr. President, an editorial appearing in the Fargo Forum published at Fargo, N. Dak., under date of July 26, 1959, very aptly and interestingly discusses these two productions. It is the kind of editorial I am sure would be of interest to people everywhere. I ask unanimous consent to have this editorial printed in the Appendix of the RECORD as part of my remarks.

There being no objection, the editorial was ordered to be prirnted in the RECORD, as follows:

NORTH DAKOTA SUMMER DRAMA NEEDS VOCAL SUPPORT

North Dakota has planted two cultural flowers along U.S. Highway 10 in the western part of the State which may produce a State promotion crop of significance, economically and otherwise, to virtually every citizen.

The seed is of good quality, the soil couldn't be better, the flowers have begun to bloom, and all that remains to bring out their full beauty and fragrance is for North Dakotans to use their tongues.

For the truth appears to be that the only element lacking for the full flowering of the State's two outdoor historical dramas, "Old Four Eyes" and "Trail West" near Medora and Mandan, is talk.

Persuasive chatter with the tourists swarming through the State like so many bees; telling the story of these colorful summertime theatrical productions and sending them to the "flowers" may spell the difference between success and failure.

Some may be inclined to reason that the flourishing or withering of these lively demonstrations of North Dakota's capabilities in the field of fine arts will have little influence on the business or cultural life of the State.

Pondering the facts might lead to another conclusion.

By their silence North Dakotans may be passing up their greatest opportunity in many years to sell the State and the charm of its colorful frontier history and western landscape to the thousands of visitors who pass through on U.S. 10 every summer.

What can result from the experiences of these tourists is anybody's guess.

Of one fact there can be no doubt. When they get home they are going to recall the highlights of their excursions and relate them to their kin and friends.

Among those highlights are going to be tales of the nights at colorful Fort Abraham Lincoln, and the quaint old cowtown of Medora.

Of sitting under the stars with sagebrush scenting the air, watching the reenactment of dramatic episodes in the lives of such famous figures as Gen. George A. Custer, and Theodore Roosevelt in his Dakota Territory days.

That these tourists may be induced by the dramas to linger and learn more about the State, to visit historic sites, beauty spots, and other attractions goes without saying. That their recitals may send many others into the State is a pretty safe guess.

Tourists taking a liking to North Dakota can stimulate many things.

Business for hotels, cafes, and many other enterprises; acquaintance with the State's scenic beauty, its lusty frontier days, and its many commercial advantages; a dispelling of unfavorable concepts about the climate and topography; employment for more people in the service fields, and perhaps other things not now envisioned.

To sum up, North Dakota has in these two plays an investment in a bigger share in America's fabulously large expenditure in the tourist industry and the prospect of expansion in the State's economic life from which it may realize abundant dividends.

While "Old Four-Eyes" and "Trail West" are the flowers from which honey can be drawn and poured back into North Dakota, it appears from a study of the situation that North Dakotans need to do some sipping too.

As a matter of fact, only a fraction of the State's own 600,000 "bees" have been drawn to the blossoms.

Despite the substantial "hovering" about "Old Four-Eyes" by locals last year the percentage of State support lacks a volume to gloat about. Many more need to come and see, and take a role in telling the story to tourists as well as their neighbors and friends.

Much printed publicity has been spread around the country but North Dakotans appear not to be using this effective means of evoking widespread interest in such a venture—enthusiastic chatter directed at tourists.

Every service station attendant, garage worker, hotel clerk, busboy, waitress, and cafe cashier in the State could train their voices effectively on the pleasure-seeking traveler and his family. They can deliver a "don't miss it" sales talk that will be persuasive and convincing.

And this is the goal at which the organizations and leaders in the two enterprises are now aiming and in which they are already achieving some success.

North Dakotans who have seen the plays are being asked to write 10 letters to friends

telling them the story. At Mandan recently, several waitresses were awarded prizes for their outdoor drama chatter in a citywide contest.

Some North Dakotans seem to have conceived the belief that lack of lodging and poor roads will make trips to the plays uncomfortable and inconvenient.

This is unfortunate since there are both ample facilities and hard-surfaced roads, although hotels and motels are not as concentrated as in a metropolitan area.

What about the plays themselves? The brain children of Dr. Frederick Walsh, head of the drama department at NDAC in Fargo, who had dreamt about them for years, they were brought out over a 2-year period. He produced "Old Four-Eyes" in 1958 and added "Trail West" this year.

Thomas Patterson of the University of North Carolina, Chapel Hill, N.C., wrote "Old Four-Eyes" and Walsh and W. T. Chichester, a new member of the NDAC drama department, coauthored "Trail West."

They are fashioned in the form of the symphonic drama, similar to the well known "Lost Colony" production of Paul Green, a former associate of the two Fargoans, which was introduced to the theatrical world in 1937 with remarkable success.

Tried and proven in the East, this form of play was viewed by Walsh as likely to enjoy similar favor in North Dakota. The State had a colorful landscape for its staging and an atmosphere and such dashing figures as Custer and Roosevelt for the story line, he felt.

"Old Four-Eyes" drew large crowds in its first year, earned money and led to the second production. The zeal, energy, and physical labor of Walsh, his players and assistants had paid off.

To tell the story of how Walsh, Chichester, and their players turned common laborers to dig in the earth, build seating, stages, and settings, and engage in the thousand and one other activities to making a play would be material of a volume to fill a book.

To tell of the cooperation of other North Dakotans in attending meetings, raising funds and otherwise contributing to the project would be to assemble enough facts for another.

The actors are people with dramatic ability and a willingness to work hard because of their love of the stage. Some are North Dakotans, others are young people from other States, most of them college drama students.

Without doubt Walsh, Chichester, and the players stand to gain prestige and some financial benefit in the minimum salary incomes from the plays but the money can total but a bagatelle compared with the benefit to the State.

Funds in excess of expenses are going into North Dakota promotional and development projects of various kinds.

Statehood and Hawaii's People

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. ASPINALL. Mr. Speaker, our Delegate to Congress from Hawaii describes the victory for statehood in the summer, 1959, issue of State Government. The Honorable JOHN A. BURNS explains that the achievement of statehood is both a fulfillment and a beginning. It is a fulfillment of the peoples' longstanding aspirations and efforts and the beginning of a new period of opportunity for them to release their energies to realize their full identity and deep hopes.

Delegate BURNS' article, entitled "Statehood and Hawaii's People," follows:

STATEHOOD AND HAWAII'S PEOPLE

(By JOHN A. BURNS, Delegate from Hawaii)

Like most events in human life, statehood for Hawaii's people is both a fulfillment and a beginning. In one sense the profoundest hopes and desires of Hawaii's people are, with statehood, realized; in another sense, statehood is only the first step toward realizing those hopes and desires. Statehood signifies the full emergence of Hawaii's people, and it signifies also their first real opportunity for full, genuine emergence.

Anyone who thinks, and who has bothered to give some context to his thinking—who knows history, literature, and the like—knows that the search for identity, which characterizes most of our individual lives, is one of the great problems of modern life. It has, of course, been a human problem ever since human life began, but it is so potently and primarily a modern problem that one may be excused for thinking it only a modern one. The great question—for individuals, as for larger groups—is "Who am I?" One thinks, for example, of such a book as "The Education of Henry Adams," and of such a peculiarly modern phenomenon as nationalism. It would be easy to multiply examples.

Within the political sphere—using the word "political" in its widest, almost its Aristotelian sense—we in the United States have proposed as the best answer to this problem the institutions of democracy. These institutions, we believe, insure for the human person the opportunity to develop and realize himself in whatever way he can best do this. They provide for the individual person, therefore, both incentive and milieu for his discovery of self, for his emergence. Democracy, as we understand it, is characterized principally by this kind of openness, an openness which allows for and encourages a genuine "aristocracy of talent" in Adams' and Jefferson's phrase.

A MOVEMENT OF THE PEOPLE

The movement for statehood in Hawaii has always been, first and last, a movement of its people. All of the benefits of statehood which one usually lists are certainly important, but they all point to something deeper. For Hawaii's people statehood represents at once their achievement of identity and their opportunity, finally, to achieve that identity as best they can.

Under statehood, for example, Hawaii's people can at last elect their own Governor. State government, therefore, will reside in their hands. They are now fully responsible for their own affairs. They can, by means of their government, shape their milieu in whatever fashion they think best. They can, in a real sense, create through this means their own image of themselves.

It is no accident that statehood comes at precisely the time when there is now in Hawaii—for the first time ever—a genuine two-party system. As late as 1945 the then leading figure in the Republican Party in Hawaii stated, privately, his firm belief that one would never see the day when there would be a Democratic Party worth much notice in Hawaii. In 1954 the Democratic Party won control of both houses of the territorial legislature, and has since maintained this control, by large majorities. Whatever future political contests may determine in this respect, we now have real contests. The narrowly partisan aspects of this development are irrelevant here. What it signifies—and one could cite other events signifying in different ways the same thing—is the emergence of Hawaii's people, their discovery of their own possibilities, their own strength, their own ability to make choices, their own voice.

Hawaiian statehood is, from many points of view, a victory. It is a victory for America, for world peace, for freedom. But in the sense in which it concerns us here, it is a victory for Hawaii's own people. It comes as a climax of a long, hard struggle, not simply in the Congress, but more especially and really in Hawaii itself. The reasons why Hawaii did not achieve statehood, say, 10 years ago—and one could without much exaggeration say 60 years ago—lie not in the Congress but in Hawaii. The most effective opposition to statehood has always originated in Hawaii itself. For the most part it has remained under cover and has marched under other banners. Such opposition could not afford to disclose itself, since it was so decidedly against the interests and desires of Hawaii's people generally.

STATEHOOD VERSUS CENTRALIZATION

I cannot clarify these remarks, as I would like to by a detailed account of pertinent Hawaiian history, but perhaps I can at least adumbrate briefly and generally some relevant facts of this history. The term that best describes the situation which more recent events in Hawaii have broken through is "centralization." And one can best see the significance, in at least one important sense, of Hawaiian statehood for Hawaii's people, if he views statehood as the converse of this centralization—a centralization which the emergence of Hawaii's people, gradual at first and accelerated since World War II—has largely destroyed. Traces of it still remain but statehood will enable us to dispose of them.

TERRITORIAL FORMATIONS

In 1893 with the collusion of the American minister in Hawaii and a contingent of U.S. Marines, a group of insurgents overthrew Hawaii's independent monarchy and set up a so-called "provisional government." This government negotiated with the United States resulting in a treaty not consented to by the U.S. Senate, whereby Hawaii was "incorporated with the United States as an integral part thereof." In 1898 Hawaii was annexed to the United States; in 1900 it was given the political status of an incorporated territory, and its new "constitution," the Hawaiian Organic Act, was enacted by Congress.

These are rather bare facts, and I should like to amplify them a little. The overthrow of the monarchy was a decidedly unpopular event, and so—as the report of Presidential Commissioner Blount, who investigated the "revolution," clearly showed—was the proposed annexation to the United States. The small group which overthrew the monarchy was distrusted by the people at least as much as it in turn distrusted them. The people's opposition to annexation was not at all a sign of antagonism to the United States—for which, on the contrary, they had deep affection and respect—but rather a sign of antagonism to the ruling group in Hawaii. The form of government which this group "provisionally" set up was much more rigidly centralized than that of the previous constitutional monarchy. The mass of the people were prevented from voting, and power remained in the hands of a very few, the propertied class.

Senator Morgan of Alabama, who came to Hawaii after annexation as a member of the commission set up to devise an organic act had urged that Hawaii apply for admission as a State in the Union. But the Hawaii members of the commission did not agree with the Senator's opinion that Hawaii's people were ready for statehood.

The constitution which the commission drew up and proposed to the Congress for adoption is interesting in many respects, but in none more than in its suffrage provisions. At the adamant insistence of the two Hawaiian members of the commission—S. F. Dole and W. F. Frear—property and income qualifications had been added to the usual educational qualification. Had this proposal been adopted, the majority of Hawaii's people, though citizens of an incorporated Territory of the United States, would not have been able to vote. Since the literacy rate among Hawaii's people was extremely high, a simple educational qualification would have allowed most of those who were of age to vote. It is interesting to note that Senator "Pitchfork Ben" Tillman of South Carolina was the man who secured for Hawaii's people the right to vote under their territorial form of government. As a result of Senator Tillman's persistence, the organic act passed Congress with only a literacy qualification of voting, much to the consternation of the ruling group in Hawaii.

A CONSTRICTIVE STRUCTURE

Still, the territorial form of government itself was decidedly centralized and constricting, especially in its executive structure. The Territorial Governor, appointed by the President of the United States, himself controlled by appointment the entire administrative machinery, exercised a two-thirds veto power over the elected legislature, and had such powers on the whole that he would have been considered unusually strong even if he had been an elected Governor. And there was no local government of any kind.

Although the Territorial legislature passed measures providing for the establishment of county governments, the Territorial executive vetoed these measures. Finally, after an investigation into Hawaii affairs, a congressional committee, in its report, deplored the lack of local government, severely rebuked the Territorial executive for his antagonism toward popular government, and warned that if the Territory did not soon institute county governments—which obviously the people wanted, needed, and were thoroughly qualified to sustain—the Congress would institute it. The Governor, as a result, allowed a bill to pass without veto.

MOTIVES FOR STATEHOOD

Clearly the issue in the events I have described is between a deep antipathy toward popular government on the one hand and the pressure of the people on the other. I have described statehood as the resolution of this issue, as a victory of the people, because the same principles and desires were at work in the movement toward statehood as in, for one instance, the movement for county government. The desire was for a free, open system as against a closed one whose control came from the top—for democracy, in other words, as against hegemony rule. Only statehood would bring full self-government and confer upon Hawaii's citizens full, responsible participation in the life of their country.

It is interesting that, while the first statehood bill introduced by a Hawaiian Delegate to Congress came in 1919, the Territorial legislature as early as 1903 had petitioned the Congress to pass an enabling act permitting Hawaii to adopt a constitution. The initiative clearly came from the people through their elected representatives.

ACTION HELD UP

Really serious action on statehood did not emerge for some time, despite clear if not as yet articulate or organized popular desire for it. The reasons were many. Time was spent on the Hawaiian Homes Commission, county government, the bill of rights and other projects. These were all good and necessary, but occupied an unnecessary amount of time and effort, since many in power prolonged the process of attaining these programs and making them effective in order to allay any great demand from the people for a serious, all-out effort in behalf of statehood. The top economic group in the Islands was then adamantly opposed to statehood, as were the political powers, whose continued existence as powers depended upon these top economic interests. Referring to the first introduction of a statehood bill in Congress by Delegate Jonah Kuhio Kalanianole in 1919, one authority states further:

"The leading Honolulu newspapers were opposed to it. They were greatly concerned over the Japanese problem in the territory * * * and the Star-Bulletin referred to the statehood bill as a 'ridiculous proposal.'" [1]

Despite the very real and sincere desire of Hawaii's people for statehood, and despite the similarly real and sincere efforts of such Delegates as William Jarrett and Victor S. K. Houston, little progress was made toward that end for some time, since controlling groups in the Islands so strongly opposed the statehood bill as, in the words of the Star-Bulletin, a "ridiculous proposal." But with passage of the Jones-Costigan Sugar Act of 1934,[2] the slightly earlier Massie case [3] and its resultant exhaustive investigation into every cranny of Hawaii's affairs, even the controlling groups thought it would be wise to support statehood.

NEW LIFE FOR THE MOVEMENT

In 1935, at the request of Delegate Samuel Wilder King, a congressional House subcommittee visited the Islands to investigate the possibilities of statehood. The report of this subcommittee was favorable, but it recommended further study. In 1937, a joint congressional committee, composed of 12 Senators and 12 Representatives, visited the islands, where they held hearings and conducted a comprehensive study of Hawaii's affairs. The committee concluded that Hawaii had "fulfilled every requirement for statehood heretofore exacted of Territories," and was therefore entitled to a "sympathetic consideration of its plea for statehood." The committee recommended further that a plebiscite be held in the islands to determine whether a substantial number of Hawaii's citizens wanted statehood. Such a plebiscite was held in the November 5, 1940, general election—in the midst of a tense world situation—and the vote exceeded 2 to 1 in favor of statehood. The war postponed further efforts.

The war changed many things. Perhaps the most significant change in Hawaii since the war, and to a great extent because of the war, has been the emergence of its people to a new self-awareness. Two factors played a great part in this: the activity of the labor unions, and the activity of returning veterans, especially those of Japanese ancestry, which became a potent force for economic democracy and, as a result, for democracy in general. These factors, especially, buttressed the fight for statehood.

In 1946 a House subcommittee, headed by Representative Henry Larcade of Louisiana, conducted an exhaustive on-the-spot survey of conditions in Hawaii. In its report the subcommittee stated that Hawaii's people had "demonstrated beyond question not only their loyalty and patriotism but also their desire to assume the responsibilities of statehood." It stated further that "The Territory now meets the necessary requirements for statehood," and recommended "that the Committee on Territories give immediate consideration to legislation to admit Hawaii to statehood."

Under the leadership of Delegate Joseph R. Farrington, who had succeeded Delegate King when the latter, in 1942, resigned to accept a commission in the Navy, a Hawaiian statehood bill passed the House of Representatives in 1947 by a vote of 195 to 133. No final action was taken in the Senate.

ACTION IN HAWAII—COMPLICATIONS IN CONGRESS

In Hawaii, meanwhile, the territorial legislature had established the Hawaii Statehood Commission, replacing an Equal Rights Commission, which was to assist Hawaii's Delegate to Congress in his efforts in behalf of statehood. The legislature, further, enacted in 1949 a bill authorizing a convention to draft a proposed State constitution. An election was held in which the people elected their delegates to the convention. The convention drafted a constitution which was subsequently approved by the territorial legislature. At the November 7, 1949, general election, Hawaii's people approved the constitution by a 3-to-2 margin.

In Congress the House again passed a Hawaii statehood bill in 1950. The Senate Interior Committee favorably reported the bill, but no further action was taken. In 1953 the difficulty was compounded when, after the House had passed a Hawaii bill, the Senate passed one only after adding Alaska to it. The House Rules Committee refused to grant a conference request and thus killed the bill. The main problem for the two Territories thereafter involved the attempt to combine their bills, since this attempt joined those who opposed both bills with those who opposed one bill but not the other.

THE VICTORY WON

Thus in the 85th Congress, in which sentiment, for whatever reason, favored Alaska rather than Hawaii, Hawaii deliberately stepped aside, allowing Alaska to be considered alone. The astonishingly swift passage—not unanticipated—of the Hawaii bill in the 86th Congress was a direct result of Hawaii's part in passage of the Alaska bill and of that passage itself.

It is impossible to name here the many outstanding people in the Congress, in the 49 States and in Hawaii who have played special and notable parts in preparing for and helping to secure the passage of the Hawaii statehood bill. Fundamentally, no one man or group of men is responsible. Statehood is, as I have said, a victory of and for Hawaii's people, and it is they who are responsible. It is they who have made for Hawaii the distinguished record by which it so patently deserved statehood. Anything that any man from Hawaii did to help secure statehood was successful only insofar as he genuinely represented Hawaii's people, and embodied their deeds and achievements.

Just to hint at the tremendous, joint effort that made statehood possible, let me note very briefly a few things that helped secure passage in this 86th Congress. Certainly one major factor in the bill's swift passage was a prodigious letter-writing campaign that originated in Hawaii. The newspapers, radio, TV, civic and citizen groups, and the people of Hawaii generally, joined in promoting and implementing the idea that each citizen of Hawaii should write his friends in the States urging them in turn to write their Congressmen and Senators in support of Hawaiian statehood. In another significant move, the Honolulu Chamber of Commerce, with no publicity and a modesty that belied its very real effectiveness, sent

[1] R. S. Kuykendall and A. G. Day. Hawaii: A History. Prentice-Hall, New York, 1948, p. 288.

[2] The act severely limited the amount of Hawaiian sugar marketable in the United States.

[3] A celebrated case in which a Naval officer and others were tried, convicted and pardoned for the murder of a Hawaiian.

businessmen to Washington to assist the Delegate in his efforts in behalf of statehood.

A NEW ERA IS OPENED

I have tried, very briefly, to suggest something of what statehood means to Hawaii's people, some of the events that occurred, and some of the factors involved, in the long effort of Hawaii's people to secure statehood. I have characterized this effort as part of a movement from a closed, centralized scheme of things to more open, diversified, and flexible forms. Statehood, I have said, in one sense completes this movement, and in another sense gives it an opportunity really to begin. Statehood is the ground and condition for a full sense of identity on the part of Hawaii's people, a full sense of their possibilities and potentialities, and for the maximum development of these.

As a State, Hawaii is a unique and powerful asset to the United States in two chief ways. Geographically, economically, commercially, and culturally Hawaii occupies the central, preeminent position in the Pacific Ocean. To this world, therefore, and to the East—which together contain more than two-thirds of the world's population and countless other tremendous untapped resources—Hawaii is America's bridge. America's very real, tangible, and practical key to friendly, profitable relations with these areas. Further, in Hawaii's people—who are thoroughly American yet understand the peoples of the Pacific and the East, and can sympathize with their problems—the United States has its best means of utilizing Hawaii's position.

Statehood is the catalyst which releases the energies of Hawaii's people and gives them the opportunity to exploit these energies. Statehood opens up, as a result, a whole new era, a whole new area of possibility, for Hawaii and for the Nation.

A Food Stamp Plan as Part of Public Law 480

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mrs. SULLIVAN. Mr. Speaker, the House Committee on Agriculture today opened hearings on the various proposals before Congress for distributing more surplus food to our needy, particularly through H.R. 1359, my bill to establish a food stamp plan. I appreciate very much the courtesy and kindness of Chairman COOLEY in permitting me to open the hearings and to discuss the proposed mechanics of a food stamp plan. I suggested today that H.R. 1359 be made a part of Public Law 480 for reasons I think are persuasive.

Because of the widespread interest among so many Members of Congress in the food stamp issue, as demonstrated last year in the 197 to 187 rollcall vote we had here on August 18 on this same measure, and as demonstrated by the many questions and comments made by members of the Committee on Agriculture during the 2 hours I testified this morning, I believe a good purpose might be served by placing my testimony in the CONGRESSIONAL RECORD for general review.

TABLE SHOWS PERCENTAGES OF RELIEF RECIPIENTS RECEIVING FOOD

I am also submitting for printing in the RECORD, a breakdown I have made of the reports and statistics from the Department of Health, Education, and Welfare as to the number of public assistance beneficiaries in each State, on the one hand, and of reports from the Department of Agriculture on the number of such welfare recipients receiving surplus food under the present distribution program. I have then struck the rough percentage figures to show what proportion of the provably most needy people in each State is actually receiving surplus food under the present program. These, I emphasize, are approximate rather than exact figures as to welfare recipients, but I have doublechecked them over a period of several months and I know they vary month to month within a very narrow range from those I have used.

Under unanimous consent, therefore, Mr. Speaker, I submit, first, my testimony this morning as follows:

AIDING THE FARMER BY PROVIDING MILLIONS OF NEW CUSTOMERS FOR NUTRITIOUS FOODS THROUGH A FOOD STAMP PLAN

(Testimony of Congresswoman LEONOR K. SULLIVAN, Democrat, of Missouri, before House Committee on Agriculture at opening of hearings on H.R. 1359 by Mrs. SULLIVAN, and related bills for establishing a food stamp plan for distribution of surplus food to the needy, Thursday, July 30, 1959, 10 a.m.)

Chairman COOLEY and members of the committee, I am grateful to the chairman for scheduling full committee hearings on this legislation. In the three previous Congresses in which I have introduced this bill—or one very much like it—the hearings were usually conducted by subcommittee and I found afterward that the committee members who opposed the plan most vigorously in committee or on the House floor were almost always those who had not participated in the subcommittee hearings and thus, perhaps, were not fully aware of the opportunities provided in this legislation not only to help our needy but to help the farmer, too.

H.R. 1359, by the way, is the same bill which a majority of the members of this committee voted for last year and which a majority of the members of the House of Representatives also supported in a roll call vote on August 18, on which the tally was 196 to 187. As you know, the bill was considered under suspension of the rules requiring a two-thirds majority, so the bill did not pass despite majority support.

MILLIONS OF AMERICANS HAVE INADEQUATE DIETS

This year, I trust we can finally see it enacted. Many of those on the Republican side of the House who opposed the bill last August are no longer in Congress and their successors, I trust, will support this kind of bill to assure a better diet for the 7,000,000 or more Americans not now able to afford minimum levels of nutrition.

We are now sending frozen chickens to the United Arab Republic, and other foods of all kinds to Yugoslavia, Poland, India, and other countries all over the world—yet for our neediest here, we can provide only some corn meal or wheat flour, some powdered milk, and that's about all. We should be ashamed of ourselves for permitting this situation to exist, in the midst of such abundance of food—a blessing from God. The surplus is such that we are desperately trying to give it away and dump it all over the world and are in effect paying some countries to take it away. We even subsidize the shipping in some cases—pay the ocean transportation costs.

BILLIONS SPENT IN FEEDING HUNGRY OF OTHER COUNTRIES

This committee has just completed extensive hearings on Public Law 480, the basic legislation for foreign distribution of surplus American food. We have spent many billions in giving food away overseas in these past 5 years. I am not against aiding the people of other nations, sharing our abundance with them, promoting peace by helping to feed the hungry. I merely want to point out that we also have hungry people here. And we are not doing, in proportion, nearly as much for them as we are for the underprivileged and undernourished of other lands. The figures prove it. More surplus food is sent as a giveaway overseas than is donated in the United States—even including the gifts of food to the school lunch program.

AMEND PUBLIC LAW 480 TO INCLUDE FOOD STAMP PLAN AND GIVE FIRST PRIORITY ON SURPLUS FOR OUR OWN NEEDY

Since Public Law 480 includes in title III, authority for domestic distribution of surplus food to our needy, and since Public Law 480 will shortly have to come before the House for renewal and extension, I would like to suggest now that H.R. 1359 be written into Public Law 480 as an additional program. The language for accomplishing that could be worked out easily and quickly, and we would thereby achieve two important purposes: One, we would assure that the first priority on distribution of foods in surplus go to our own needy rather than to the needy of other countries—under present law, the Department of Agriculture apparently contends it is not permitted to give away some surplus items here if any foreign country wants to arrange to obtain those same items under Public Law 480; and secondly, we would assure prompt House consideration of this plan as a logical provision of legislation dealing with the whole question of surplus distribution. We saw last year how H.R. 13067 was locked up in the Rules Committee so that it could come up for a vote only under the suspension of the rules procedure which led to its demise.

I believe Chairman COOLEY agrees with me that this bill now belongs as part of Public Law 480, and I earnestly urge that it be so included.

HARD CORE OF 7 MILLION NEEDY

Now, Mr. Chairman and colleagues, let me tell you why I think this legislation is so vital not only to our own needy but to the American farmer as well. We have, as I said, more than 7 million Americans not now able to buy even the barest minimum diet. These are the people on various forms of public assistance. The are—most of them—in dire need in either good times or bad. They form a hard core of the needy aged, the needy disabled, the blind, the families without income except what comes from public agencies or private charities. Their monthly checks do not cover minimum needs. In addition, in bad times—in recession—the ranks of the needy are swelled by millions more temporarily without jobs who may have used up their unemployment benefits—or who were not eligible for unemployment compensation. Many of them cannot get on public assistance regardless of need, in certain States, if they are "employable." Nevertheless, they still have to eat.

Here in Washington, in the Nation's Capital, Eve Edstrom of the Washington Post did a heartrending series of articles a year or so ago about hungry children rooting in garbage cans for something to eat. Out of this came a surplus distribution program here and a movement to provide more school lunches. But the problem Eve Edstrom wrote about in Washington was not an iso-

lated one—it can be duplicated in cities all over America.

PRESENT DISTRIBUTION PROGRAM A FAILURE

We have the food. We have, as I said, such an abundance of food, it is now considered by Mr. Benson to be a great calamity. It could be a great blessing if properly used. It is not now properly used to help our own needy—that is clear and undeniable.

True, we have a surplus distribution program in operation in this country. But it is a very inadequate program. Only one-third of our counties participate in it because of its cost. And the figures show, too, that only one-third of our public assistance recipients throughout the country receive any of the food—2⅓ million out of 7 million. If you take into account another fact, the statistics are even more discouraging—of the 2⅓ million relief recipients receiving surplus food, 400,000 are in Puerto Rico, one-quarter million each are in New York and Pennsylvania and Michigan. Another 175,000 are concentrated in Mississippi. For the rest of the States, therefore, in most cases anyway, far fewer than one-third of the relief recipients receive any surplus food. For instance, in the chairman's State of North Carolina, there are nearly 180,000 people on various forms of public assistance, but none of them receives any surplus food. In South Carolina there are 85,000 on public assistance, but none of them receives surplus food. It is not distributed to the public assistance people in Oregon, Nebraska, Louisiana, Idaho, Florida, or Delaware, to name a few. In my State, Missouri, only about 15 percent of the people on public assistance receive surplus food; in Texas and Wisconsin it is about the same; in California it is about 3 percent; in Georgia about 8 percent; in Massachusetts about 2 percent; in North Dakota about 4 percent; the same in Washington State, and so on. Of course, some of the States do much better than that, but on the whole it is a very spotty program as to coverage, and a completely unsatisfactory program in operation. It is a cruel hoax—a fraud—an illurion.

Any member of this committee who would disagree with me on that has just not bothered to go down to the distribution centers in the cities of our country and see this program in operation—not just in the distressed mining areas, but in any large city participating. People—old people, crippled, undernourished people—stand in long lines once a month or so to obtain big bags of flour or corn meal and some dried skim milk they cannot carry. There used to be some cheese and butter—but not now. Once, years ago, there was some canned beef. That was disposed of in one vast splurge—and then it was gone and there was never any more.

NO VARIETY IN FOODS DISTRIBUTED

When you investigate this present distribution system in places like Kentucky, West Virginia, the mining areas of Pennsylvania and Ohio and elsewhere, or talk to Members of Congress from those areas, you find it is a scandal—a crime against humanity. The costs of distribution far outweigh the value of the food. There is no variety.

Those are strong words, and I mean every one of them. I don't care how fine—how pious and decent—Mr. Benson and his aides may be in their personal lives—in this program they are participating in a cruel and inhumane thing when you stop to consider how much good—how much real good—could be accomplished with this surplus food. Even the chairman of the Republican National Committee concedes it is woefully inadequate. Of course, he blames the law for that; I blame the administration of the law.

Let me point out something that every one of you knows better than I—that the farmers of this country—most of them—are in real difficulty. You have struggled to devise legislation which can help the farmer, and you have received precious little help from the administration. And now you find that the House Members from city districts like mine are looking more and more askance at your proposals for aiding agriculture.

CITY FOLKS SEE NO RELATION TO FARM PROGRAMS

Why? Not because we are against the farmer. We know the farmer must be prosperous if the goods we make in the cities are to be sold. A prosperous farmer is a good customer for city industry.

But if I may say so, I would point out that most—nearly all—legislation you bring forward to aid the farmer neglects completely to tie your objective of reasonable farm prices into the companion problem of helping us to assure an adequate diet for all of our citizens. A food stamp program would establish that bond. It would provide at least 7 million new customers—regular customers—for the output of the average farm. Can you devise any better legislative device for increasing the consumption of farm commodities than by bringing in more customers—regular customers—for food items those people are not now buying?

FOOD STAMPS WOULD COVER ALL FOODS IN SURPLUS SUPPLY

As I have set up the program under H.R. 1359, the food stamp plan would provide for distribution through the stores of not just the storable surpluses but of the kind of foods, too, which can be acquired under section 32. We all know the Department has not used section 32 authority as Congress intended it to be used to help the farmer. We have had to force its greater use in the school lunch program, for instance.

There is no reason—no good reason—why fresh fruits and vegetables, and meats, when they are in such surplus as to cause marketing difficulties and depressed farm prices, cannot be utilized in season in a good stamp plan. There are hundreds of millions of dollars set aside each year from customs receipts—30 percent of customs receipts—for use in removing farm surpluses from the market. We have the maximum permissible annual carryover of $300 million in this fund, plus the additional $200 million or more made available each year—much of which is never used.

IS SECTION 32 WORTH CONTINUING?

This raises the question: If section 32 funds are not to be used both to help the farmer and the needy, then why continue section 32? By what right should this money be made available each year just to help the farmer, if no one else gets any benefit from it? If we cannot use it both to help the farmer and the needy in our cities, by providing more variety in the diets of our 7 million at the bottom of the economic ladder—people who go without the kind of food they need—then it seems to me that the usefulness of the section 32 program is over as far as the average citizen and taxpayer is concerned.

We all pay tariffs on imported goods, and the farmer no more so than anyone else. This fund has in it $500 million right now which could be used to reduce the national debt, if it is not going to be used to help those who need help. A food stamp plan, on the other hand, would provide a real incentive to the full use of the section 32 funds and authority.

DIRECT FARM PAYMENTS EXCEED 1 BILLION YEARLY

One last point and then I will try to answer your questions:

It has been suggested by some of the members of this committee that relief—public welfare—is not the job of the Department of Agriculture. That is true. But it seems to me that in first accumulating billions upon billions of dollars worth of food, then in dumping billions of dollars worth of food overseas for currencies we will probably never use to any significant extent except to give it back to the countries involved, and now in paying out more than $1 billion a year in direct cash payments to farmers, and another billion a year just to store our surplus food—there should also be room—there must be room—in such a program to aid the farmer by getting him more customers—7 or 8 million more regular customers each week for fresh eggs and fresh milk and an occasional half pound of bacon, or some fresh fruits and vegetables in season, or some chickens—all items at present well under parity.

WHY POWDER EGGS AND MILK?

We now buy up milk and eggs and powder them and give the powdered milk and powdered eggs away. Why not give out fresh milk and fresh eggs? Eggs are only at 58 percent of parity. We seem to be able to send chickens to Egypt but we can't provide them to our poorest here even though the price to the farmer is at 56 percent of parity. Apples here are at 53 percent of parity. Citrus fruits go up and down—they're up now—but often they are way down. Why not distribute some surplus oranges or grapefruit in season to our provable needy? A food stamp plan provides the machinery for using our surplus—not storing it or dumping it.

I do not agree with some Members who believe the surplus distribution program should be switched over to the Department of Health, Education, and Labor. It would mean complete duplication in two separate departments of surplus food distribution systems—one for the needy, another for the school lunch and other programs. The responsibility for using this food properly—effectively—lies in the Department of Agriculture, although my bill also includes consultation with Health, Education, and Welfare, and also Labor. The Agriculture Department has failed to use its authority to institute any effective food distribution program. Congress must force it to be done.

FOOD STAMP PLAN SAFER FROM VETO IN PUBLIC LAW 480

The only effective way of accomplishing that now would appear to be through the inclusion of a food stamp plan as part of Public Law 480. I am not unmindful of the fact that a veto could stop my food stamp bill much more effectively standing by itself than as part of Public Law 480, which the administration wants and needs. I ask your help, therefore, in working it out in this fashion.

And I sincerely believe that such a step would be one of the most effective things you could do at this point to help the hard-pressed small farmer who raises the varieties of foods needed for an adequate diet. Adding 7 or 8 million Americans to the number of his customers able to obtain a decent diet would be a tremendous help in boosting farm sales and farmers' income.

Thank you.

STATISTICS ON RELIEF RECIPIENTS RECEIVING SURPLUS FOOD

Now, Mr. Speaker, I submit the tabulation I have prepared on the number of persons in each State on various forms of public assistance, the number of such persons and the percentage of such persons receiving surplus food under the present distribution system. The figures, as I said, are rough—but generally accurate:

TABULATION PREPARED BY REPRESENTATIVE SULLIVAN SHOWING STATE-BY-STATE PARTICIPATION IN PRESENT FOOD DISTRIBUTION PROGRAM BY PERSONS ON PUBLIC ASSISTANCE

The following figures and percentages are rough approximations based on monthly estimates from the Department of Health, Education, and Welfare and on periodic re-

ports from Department of Agriculture. There may be some variation from month to month:

State	Number on assistance	Number on assistance receiving food	Approximate percentage welfare class receiving
Alabama	207,000	46,000	22.0
Alaska	6,410	0	0
Arizona	46,000	21,000	45.0
Arkansas	98,000	89,000	90.0
California	622,000	20,000	3.0
Colorado	93,000	20,000	22.0
Connecticut	58,000	800	1.5
Delaware	13,000	0	0
District of Columbia	20,000	20,000	100.0
Florida	185,000	0	0
Georgia	182,000	13,000	7.0
Hawaii	16,000	0	0
Idaho	16,000	0	0
Illinois	114,000	58,000	50.0
Indiana	91,000	49,000	55.0
Iowa	80,000	45,000	55.0
Kansas	62,000	12,000	20.0
Kentucky	150,000	75,000	50.0
Louisiana	251,000	0	0
Maine	44,000	26,000	58.0
Maryland	50,000	22,000	49.0
Massachusetts	168,000	4,000	2.0
Michigan	316,000	220,000	70.0
Minnesota	109,000	27,000	25.0
Mississippi	175,000	150,000	86.0
Missouri	245,000	35,000	14.0
Montana	24,000	235	1.0
Nebraska	35,000	0	0
Nevada	8,000	853	10.0
New Hampshire	15,000	4,600	30.0
New Jersey	96,000	14,000	15.0
New Mexico	39,000	29,000	75.0
New York	509,000	262,000	50.0
North Carolina	179,000	0	0
North Dakota	18,000	769	4.0
Ohio	345,000	61,000	18.0
Oklahoma	181,000	113,000	62.0
Oregon	58,000	0	0
Pennsylvania	362,000	271,000	75.0
Puerto Rico	239,000	400,000	[1] 165.0
Rhode Island	36,000	8,600	24.0
South Carolina	85,000	0	0
South Dakota	24,000	13,500	57.0
Tennessee	147,000	36,000	25.0
Texas	368,000	47,000	13.0
Utah	28,000	18,000	65.0
Vermont	15,000	4,700	31.0
Virgin Islands	1,700	0	0
Virginia	66,000	6,900	10.0
Washington	139,000	5,000	4.0
West Virginia	109,000	85,000	78.0
Wisconsin	107,000	17,000	16.0
Wyoming	8,800	5,000	57.0

[1] Estimates of persons on public assistance from HEW; estimates of persons on public assistance receiving surplus food from Department of Agriculture.

TEXT OF H.R. 1359

Mr. Speaker, because the bill itself clearly outlines the proposed mechanics of an effective food stamp plan in language which I believe is clear and understandable, I now submit for inclusion at this point in the RECORD the full text of H.R. 1359 as follows:

[86th Cong., 1st sess., in the House of Representatives, January 7, 1959, Mrs. SULLIVAN introduced the following bill; which was referred to the Committee on Agriculture]

H.R. 1359

A bill to provide for the establishment of a food stamp plan for the distribution of $1,000,000,000 worth of surplus food commodities a year to needy persons and families in the United States

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in order to promote the general welfare, raise the levels of health and of nourishment for persons whose incomes prevent them from enjoying adequate diets, and dispose in a beneficial manner of food commodities acquired by the Commodity Credit Corporation or the Department of Agriculture in carrying out price support operations or diverted from the normal channels of trade and commerce under section 32 of the Act of August 24, 1935, as amended, the Secretary of Agriculture (hereinafter referred to as the "Secretary") is hereby authorized and directed to promulgate and put into operation as quickly as possible, but not later than January 1, 1960, a program to distribute to needy persons in the United States through a food stamp system such surplus food commodities.

SEC. 2. In carrying out such program, the Secretary shall—

(1) distribute surplus food made available by the Secretary for distribution under this program only when requested to do so by a State or political subdivision thereof;

(2) issue, or cause to be issued, pursuant to section 3, food stamps redeemable by eligible needy persons for such types and quantities of surplus food as the Secretary shall determine;

(3) distribute surplus food in commercially packaged form, preferably through normal channels of trade;

(4) establish standards under which, pursuant to section 3, the welfare authorities of any State or political subdivision thereof may participate in the food stamp plan for the distribution of surplus foods to the needy;

(5) consult the Secretary of Health, Education, and Welfare, and the Secretary of Labor, in establishing standards for eligibility for surplus foods and in the conduct of the program generally to assure achievement of the goals outlined in the first section of this Act; and

(6) make such other rules and regulations as he may deem necessary to carry out the purpose of this Act.

SEC. 3. The Secretary shall issue, to each welfare department or equivalent agency of a State or political subdivision requesting the distribution of surplus food under section 2(1), food stamps for each kind of surplus food to be distributed, in amounts based on the total amount of surplus food to be distributed and on the total number of needy persons in the various States and political subdivisions eligible to receive such food. The food stamps shall be issued by each such welfare department or equivalent agency to needy persons receiving welfare assistance, or in need of welfare assistance but ineligible because of State or local law, and shall be redeemable by such needy persons at local distribution points to be determined by the Secretary under section 2(3).

SEC. 4. Surplus food distributed under this Act shall be in addition to, and not in place of, any welfare assistance (financial or otherwise) granted needy persons by a State or any political subdivision thereof.

SEC. 5. In any one calendar year the Secretary is authorized to distribute surplus food under this Act to a value of up to $1,000,000,000, based on the cost to the Federal Government of acquiring, storing, and handling such food.

SEC. 6. For the purposes of this Act, a needy person is anyone receiving welfare assistance (financial or otherwise) from the welfare department or equivalent agency of any State or political subdivision thereof, or who is, in the opinion of such agency or agencies, in need of welfare assistance but is ineligible to receive it because of State or local law.

SEC. 7. The Secretary of Agriculture, in consultation with the Secretary of Health, Education, and Welfare and the Secretary of Labor, shall make a study of, and shall report to Congress within six months after the date of enactment of this Act, on the feasibility of, the costs of, and the problems involved in, extending the scope of the food stamp plan established by this Act to include persons receiving unemployment compensation, receiving old-age and survivors insurance (social security) pensions, and other low income groups not eligible to receive food stamps under this Act by reason of section 6 of this Act.

SEC. 8. There are hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, such sums as may be necessary to carry out the purposes of this Act.

The Great Menace to America's Children

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 30, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following address by Postmaster General Arthur Summerfield appeared in Child Family Digest for May-June 1959.

The subject is the handling of obscene literature, pictures, slides, and so forth, through the Post Office Department.

Mr. Speaker, this Congress should not adjourn without passing legislation to strengthen the Postmaster General's and the Department's hand in this matter. The flood of absolute, unmitigated filth going through the mail now is something that is truly alarming, especially as most of it goes into the hands of our schoolchildren.

There is no doubt that we could get action now if the public, especially the mothers of America, knew what is happening:

THE GREAT MENACE TO AMERICA'S CHILDREN: WHAT CAN I DO ABOUT IT

(Address by the Honorable Arthur E. Summerfield, Postmaster General of the United States, before Conference of Women Leaders of Civic, Educational, Parent, and Religious Organizations and Women Members of the Congress and Government Agencies, Washington, D.C., May 12, 1959)

There is flourishing in this country today a vile racket of huge proportions about which the public is not well informed.

This racket involves the use of the U.S. mails for the wholesale promotion and conduct of mail-order business in obscene and pornographic materials.

I say it is huge advisedly. We can estimate at present that the sale of these materials through the mails is running at more than $500 million a year.

The especially vicious aspect of this racket is the fact that these purveyors of filth are aiming their attention more and more at the Nation's children—teen-age boys and girls, and even younger.

They are dumping pornographic sewage into the hands of hundreds of thousands of our children, through the family mailbox—most of it material that has not been ordered—material intended to solicit the sale of utterly obscene pictures, slides, films, and related trash.

How do these merchants of filth obtain the names and addresses of children?

They have any number of ways. One of the most common is to offer, in a legitimate ad in a normal publication, the sale of a product of interest to a boy or girl. This would be stamps, or model airplanes, or doll clothes, and the like. These items are frequently offered at bargain prices.

The child, usually with the parent's assistance, sends for and receives the item. Now the smut dealer has the name on his list,

and soon the child is receiving lewd solicitations through the mail.

These racketeers also buy prepared mailing lists of children's names, of which there are many. They even go to the extent of gathering up high school year books, from which they take names and match them up with addresses in city telephone books.

Recently, we conducted a raid in New York City in which we confiscated 17 tons of highly obscene printed and filmed materials. The producer of these materials had in his possession a mailing lits of names and addresses of 100,000 persons, including many high school students.

If you were to read some of the solicitation material that these debauched persons send to the children, I believe you would be sickened.

You would also be deeply disturbed to read the letters our postmasters receive from parents. Such letters for example as one from a mother who wrote: "The enclosed material was received by my son, age 8 years, a few days ago. Is there anything that can be done to stop this?"

The material sent to the 8-year-old boy began with the statement: "I am writing to you as a person interested in collecting all types of art photography of nudes."

Or like the letter which read: "Is there anything that can be done about literature like the enclosed? This is a mother's plea to you to do all in your power to stop the flow of this filth from seeping into our home. Thank you for anything you can do to protect my 10-year-old girl."

Or the letter which stated: "I am enclosing a folder sent to boys at our camp. Is there any way that this terrible literature and its source can be destroyed?"

It is apparent that many children, without parental attention, do fall into the trap of ordering such material, for the filth merchants regard their traffic with children as a major and growing part of their highly lucrative business.

Most parents who intercept these solicitations in the mail are, of course, shocked and greatly concerned. Last year, our Postal Inspection Service investigated 14,000 complaints about obscenity in the mails. Nearly two-thirds of these complaints were from parents objecting to the receipt of lewd materials by their adolescent children.

In the case of a single mailing by one purveyor of filth, over 5,000 complaints were received, and all but three were from parents protesting mailings to their children.

On the basis of all the facts we have, our Inspection Service estimates that probably 700,000 to one million children this year will receive such invitations to depravity through the mails.

This is big business. It thrives on the curiosity of adolescents. It has no boundaries based upon social position, religion, race, or location. Your child, or the child next door, may be on a list. If not, he—or she—may get on one. For the lists are expanding. Nobody is immune. Obscene mail is addressed to both sides of the track. It finds its way into orphanages. It is addressed to children as young as 8 years.

Yes, their parents will be worried—and well they should be. For it is well known to law enforcement groups that juvenile delinquency stems in measurable part from the demoralizing influence of exposure to obscenity and pornography.

Consider this, if you will, in the light of a recent report on delinquency by a Senate subcommittee. The report states that 1 out of every 5 boys in this country, of ages 10 to 17, has a court record, charged with breaking the law.

Again and again, in the investigations of armed robbery, extortion, embezzlement, and forgery, authorities find that those guilty of these crimes were early collectors of obscene pictures and films.

And it is well known that almost all sex criminals and sex murderers prove to have a long record of addiction to pornographic and sadistic material. Your children may never be exposed to this material. But they could be victims of sex criminals who have been exposed to it.

Let me quote from the report of the Senate subcommittee that studied this problem:

"There is a peculiar resemblance to narcotics addiction in exposure of juveniles to pornography. There is the same pattern of progression. Once initiated into a knowledge of the unnatural, the impressionable young mind with the insatiable curiosity characteristic of those reaching for maturity inevitably hunts for something stronger, something with more jolt, something imparting a greater thrill.

"The dealer in pornography is acutely aware of this progressive facet; his array of material to feed this growing hunger is carefully geared to the successive stages. Like the peddler of narcotics, his only interest is to insure that his customers are hooked; he knows that once they are hooked they will continue to pay and pay."

It is clear the Congress is concerned with this problem. Much good should come from the hearings now being held by the House Post Office and Civil Service Subcommittee on Obscene Literature, headed by Congresswoman KATHRYN E. GRANAHAN.

This is a problem that must be met. I personally am both revolted and incensed by this depraved, arrogant, and poisonout attack on the minds of our children. These feelings are shared by our postmasters around the country and by my associates in the Post Office Department.

We recognize that there is urgent need for positive action now. We are, therefore, in effect, declaring war on these purveyors of filth, big and little, high and low.

We are launching an intense and unrelenting effort to stop this monstrous assault on the Nation's children in every way possible.

And let me say we are confident that, with adequate public support, this job can be done.

I do not mean to imply at all, of course, that the Post Office Department is only now awakening to this problem.

The records show quite clearly that the Post Office, over the years, has diligently tried to keep the mails clear of indecent material. It has done so even while subjected to attack and ridicule by those who hope to benefit personally from obscene mailings, and by those who, confusing liberty with license, unwittingly give them assistance.

Investigations conducted by our postal inspectors, in fiscal 1958, caused the arrest of 293 persons. Our General Counsel issued 92 orders barring use of the mails.

The arrests last year were 45 percent above the previous year, and this year they will increase substantially again.

Congress, as far back as 1865, made it a Federal offense to mail obscene matter.

The Post Office has lent its fullest support to such legislation. But commercialized pornography has continued to grow.

It has expanded tremendously since World War II.

It has doubled in just the past 5 years alone.

Especially, as I have pointed out, the effort has been to expand the market through sales to children.

There appear to be two basic reasons for this rapidly growing volume:

First, the huge profits realized from a relatively small capital investment; and second, the very broad definition of obscenity handed down by certain courts, notably in Los Angeles and New York, where the great bulk of the mail order business in obscenity and pornography originates.

These liberal rulings have established, over a period of time, virtual sanctuaries in which dealers of obscenity have operated with impunity and in defiance of justice.

We in the Post Office for several years have strongly urged legislation which would permit prosecution not only at the points of mailing of obscene material, but in the communities where it is received—where the real damage is done—and where citizens have an opportunity to express their standards of morality and decency.

Such legislation was passed by the 85th Congress and signed into law by President Eisenhower last year. It is, we believe, among the most important legislation adopted in recent years.

We have pressed, and are determined to press, its use to the fullest possible extent. The first case following this legislation was at Boise, Idaho, and it had to do with mailings made from California and Oregon. The offenders, a man and his wife, each received a 10-year prison sentence and a fine.

Similar cases are now pending. And I would like to say that a goodly series of stiff sentences of that kind can go a long way toward discouraging other such people from further mailings of their degenerate trash to children.

To make full use of this new legal weapon, however, the Post Office must have the cooperation of parents and decent-minded citizens everywhere. Without such cooperation on a broad and resolute scale, we are under great handicap.

As you know, the absolute privacy of the mail is one of our basic American rights. The Post Office Department cannot, and will not, violate this right, even when it has strong evidence that the mail is being used for unlawful purpose. I, for one, believe fully in this right.

The Post Office, therefore, can legally identify and take action against violators of the mails only on the complaints of citizens who receive such material.

Let me repeat that point: We can act only after the recipient of obscene mail has opened that mail, and the material has been forwarded to the local postmaster as evidence.

To achieve this cooperation on the largest possible scale, our intensified program for action is fourfold:

1. To draw maximum public attention to the menace of this racket;

2. To urge parents to help us apprehend the mailers of filth to their children:

3. To help mobilize community support behind adequate law enforcement of local ordinances or State laws when these purveyors are apprehended and brought to court.

4. To rally public opinion behind new and stiffer legislation on obscenity.

Obviously there is going to be less likelihood of putting dealers in obscenity out of business if they are not "given the book" when they are caught.

Unfortunately, giving them the book is not easy. Most of these smut merchants make such profits that they are able to retain high-priced lawyers who know all the tricks.

And these gentlemen all too often have used the tricks of hamstringing, delaying, and confusing action until their clients have gone free or received only small prison terms or fines. Unperturbed, the peddlers have been back in their racket under a new name within days.

They are also experts at raising a hue and cry about "censorship," "fredom of the press," and "civil liberties." And all too

often they are able to find willing pawns to take up their cry and carry on their slimy battle for them.

This, of course, is utter nonsense I would only ask any such misguided person these questions:

Is it a violation of civil liberties to deny the sale of liquor to a 10-year-old boy?

Is it censorship to prosecute those who sell narcotics to junior high school girls?

Are we abridging civil liberties when we do not permit children to drive a car?

I am sure the answers, and the point to be made, are quite clear.

Peddling pornographic poison to children is a heinous crime. And that community which does not punish the criminal to the full extent of the law is failing its duty—failing just as surely as if it were to allow sales to children of liquor or dope.

Now, what is likely to happen if we do not rid ourselves of this social cancer?

First, we may as well concede that the obscenity business, with its vast revenue, will be taken over by organized crime to a far greater extent.

It will become a gigantic organized racket far beyond even its present scope, with millions more of our children its principal victims.

The undermining of the moral fiber of the Nation's children will spread, with the poisoning of increasing millions of minds.

Sex crimes will be a spreading blight on our society, and will become far more prevalent than they are today.

And overall, we could expect an ultimate breakdown of order and decency in this country.

My friends, I am not asking you simply to view with alarm. I am asking you to view with deep conscience, deep concern, and determination.

Thorough action must be taken now. I am asking you to take part. You have both the opportunity and—I would dare to say—the responsibility for joining with the Post Office in this drive.

Help us to alert parents across the country. Help us through your organizations, and your publications, and by your individual efforts. Let the parents of America know what to do on any day that obscene mail arrives in their home.

The process is very simple.

First, parents should save all materials received including the envelopes and all enclosures.

Second, parents should report the material immediately to their local postmaster and turn the materials over to him, either in person or by mail.

Finally, all citizens, whether or not their children have been touched with this filth, can help by backing up Members of Congress and local officials in their growing efforts to stamp out this evil.

I urge you to carry this message to the other officers of your organizations, and to your local chapters. Urge your local members to enlist the support of religious and educational leaders, newspaper editors and citizen groups in their communities. The task calls for everyone who can, and will, contribute effort and dedication to it.

I pledge to you that the Post Office Department will lead the way. And if the American people are made properly aware of this challenge, I am confident—as I know you are—that the challenge will be firmly and successfully met.

(EDITOR'S NOTE.—As protection to children, parents might either be present when mail from unknown sources is opened, or open such mail themselves, carefully explaining to the young addressee the reasons. In addition, parents can prevent children from ordering by mail bargain toys, etc., unless the parent knows or can investigate the advertiser.)

Mr. Secretary of Public Relations

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 14, 1959

Mr. BERRY. Mr. Speaker, I have asked unanimous consent to insert in the RECORD an editorial from the July 1959 issue of Public Relations Journal, published by the Public Relations Society, the largest public relations organization in the United States, and also to include an article by the Honorable KARL E. MUNDT, U.S. Senator from South Dakota, entitled, "A Department of International Public Relations for the United States" which appeared in the same issue.

The editorial and article are as follows:

MR. SECRETARY OF PUBLIC RELATIONS

"What we need is some central, coordinating agency for improving our public relations abroad. It is time we put our experts to work in some department of Government headed by an officer at Cabinet level so we can develop and operate a cohesive program."

KARL E. MUNDT, U.S. Senator from South Dakota, wrote these words in the lead article in the current issue of the Journal.

It seems to us that Senator MUNDT's statement quoted above, plus other comments in his article, have tremendous significance. They spell a heightened recognition and appreciation of the public relations function on national and international levels.

Because some readers may not know fully the highlights of the career of this powerful protagonist of public relations, we mention a few: He received his master of arts degree at Columbia University. After working as a teacher he became a superintendent of schools. In 1938 he was elected to the U.S. House of Representatives continuing for 10 years, and then as U.S. Senator since 1948.

While serving as acting chairman of the House Committee To Investigate Un-American Activities, the famous "pumpkin letters," involving Alger Hiss, came to light.

Later he chairmaned the Army-McCarthy hearings in the Senate. Today he is a member of several Senate committees—Appropriations, Government Operations, Investigating, and Agriculture and Forestry.

We hope that everyone who receives a copy of this issue of the Journal will read the complete article. To encourage such readership, if any urging is needed, we select a few key points which the Senator makes:

The shocking treatment received by Vice President NIXON and Mrs. Nixon in South America awakened many people in the United States, inside, and outside of our government, to the great need for preventing such hostility. The right kind of program could still repair and build up our prestige in many countries where we have lost friends or need to win them.

The Senator goes in swinging at the Communists and their methods—and the dangers to our friends and ourselves.

He makes favorable comments about the Voice of America and other news media. The Soviet government spends a great deal of money to jam our broadcasts and to cast discredit on our publications. This indicates clearly that the Communists fear and hate our informational programs.

But we lack coordination in these efforts. Fifteen different U.S. Government agencies take active part in our programs of international public relations. This creates a certain amount of confusion. Often one agency doesn't know what the others are doing or planning to do. Such conditions make it harder to get approval of Congress for really needed projects.

A new Department of International Public Relations could administer and further our whole complex of activities designed to build human understanding everywhere, so necessary for peace. The article continues with this passage:

"Such a department could handle all our information media—such as motion pictures, the Voice of America (soon to be supplemented, I hope, with the Vision of America by utilizing television), our overseas libraries, foreign news services, low cost book programs, international exhibits and the like."

The article proceeds to state that we have 1,500,000 U.S. citizens located outside our national borders (not including countless tourists). Most of them do not know the language or sensitivities of the country in which they are stationed. They have had insufficient training in how they could and should improve our public relations abroad.

This editorial merely touches the treetops of the Senator's material. So we believe you will enjoy the full text. And then we hope you will continue to read on. We include two widely varied case studies—something most readers have asked to have included in issues of the Journal.

We present examples showing how public good will is won or lost on the firing line—where the salesperson encounters the customer; how well-trained librarians can provide vital help in public relations work. There are several other items which we believe will interest and benefit many readers.

Public relations encompasses a vast variety of interests. With this issue and others already planned we will try to cover a large segment of the waterfront.

VERNE BURNETT.

A DEPARTMENT OF INTERNATIONAL PUBLIC RELATIONS FOR THE UNITED STATES

(By KARL E. MUNDT,[1] U.S. Senator from South Dakota)

The stoning of Vice President NIXON during his South American tour was the most shocking act of discourtesy ever demonstrated to an official of the United States in our history. When mobs spat on Pat Nixon, the Vice President's attractive wife, they violated the traditional Latin American concept of courtesy to women, and by so doing

[1] KARL E. MUNDT, Republican, U.S. Senator from South Dakota, was born in Humboldt, S. Dak. He received his early education in that State and in 1923 was graduated with a bachelor of arts degree from Carleton College in Minnesota. He received his masters degree from Columbia University, New York City, in 1927.

After a business career as a teacher and a superintendent of schools, he resigned and was elected to Congress in 1938. He served in the U.S. House of Representatives for 10 years and was elected to the U.S. Senate in 1948.

During the time he served as Acting Chairman of the House Committee To Investigate Un-American Activities the much-publicized, so-called pumpkin papers were discovered, leading to the disclosure and conviction of Alger Hiss.

He also served as chairman of the widely televised Army-McCarthy hearings.

Currently Senator MUNDT is a member of the Senate Appropriations Committee; the Committee on Government Operations; the Senate Investigating Committee; and the Senate Committee on Agriculture and Forestry.

they virtually spat on every woman in our country.

Yet, these incidents may have value, if they awaken us to a pressing need in our Government for methods to prevent such open hostility. I believe that the incidents most surely could have been prevented—that they need never have occurred. It is now late, but proper action can help repair the damage to U.S. prestige in many areas of the world where we have lost friends and have ceased to influence people.

FEEDING GROUNDS OF DISTRUST

It is not enough to blame local Communists in Bolivia and other South American countries for the sorry spectacle of mob violence against a visiting statesman. The Communists cannot create all the bitterness that exists, but they can sound it out and exploit it, fully. And that is what they did. Our job is to destroy these international feeding grounds of distrust.

This is clearly a job for public relations experts. I have felt that our Government needs to have a Department of International Public Relations which is given the authority and the scope of operations to ease international tensions through proper utilization of public relations techniques and practices.

Our country long avoided using any such program, or setting up any agency or commission which has any connotation of public relations. This was done, largely, because there exists a feeling that to attach the term "public relations" to anything we do overseas is to tag it as progaganda. Where that attitude does not exist, those who disclaim use of the term "public relations" say that such usage would give the Communists something to use further in lying about the United States.

These attitudes are too squeamish to be practical. We can never hope to do anything that the Communists won't lie about, and, as for public relations being propaganda, we have only to go ahead with a good program to soon erase any such misconceptions in the minds of foreign nationals. In the end, the Communist lies will be turned against themselves as we demonstrate that just telling the truth is good enough for us.

It is important to note that the U.S. Advisory Commission on Information said in a report recently released, "Another limitation is that there is some lack of acceptance both in Washington and abroad of the importance of the public relations aspects of foreign policy. Often advice in this area is not even sought by the relevant departments or agencies. This leads to inconsistencies in presentation and explanation which, in turn, creates confusion in the minds of our foreign audience."

VOICE OF AMERICA HAS BEEN EFFECTIVE

We have been effectively telling the truth to the world for years with our Voice of America program and other news media. That has been demonstrated by the fact that the Soviet Government spends heavily to jam our broadcasts and to discredit our magazines and booklets.

In fact, we have a number of programs in our Government that do effective jobs in creating good will around the world in behalf of the United States. We have a number of programs—but they are not all interrelated and few, if any, are coordinated so that one agency knows what another is doing in a similar program. Instead of coordination we are more likely to find duplication.

Our former Minister to Rumania, Robert H. Thayer, who recently headed the Bureau of Intelligence and Research in the Department of State, has been appointed as Special Assistant for the Coordination of International Education and Cultural Relations in the hope that he can bring some order out of the tangled web of multifarious international education activities. In his early report on this project, Mr. Thayer pointed out that he found it necessary to call together representatives of 15 different Government agencies to bring into focus the various facets of our programs of international human relations.

The reason I worry about the lack of coordination is that such confusion tends to discredit the effectiveness of such programs. It makes it more difficult to get congressional approval for needed projects. These programs offer us our best opportunities to win friends around the world, but in the field of exchanges of persons and other cultural relations programs, which do the overall job of creating abroad the proper image of America, we find ourselves in a veritable jungle of repetition and confusion.

It often appears that the shortage of coordination is even more serious than the shortage of cash with which to operate a king-sized program.

EXCITING CHALLENGE

There is an exciting challenge in the creation of a Department of International Public Relations. Such an agency could administer and advance our entire fabric of activities in building the human understandings so essential to a lasting peace.

Such a department could handle all our information media—such as motion pictures, the Voice of America (soon to be supplemented, I hope), with the Vision of America by utilizing television), our oversea libraries, foreign news services, low cost book programs, international exhibits, and the like.

The see-for-yourself programs which include the exchange of persons, trade fairs, cultural exchanges, which include the performing arts and artists, poets, philosophers, technicians, health officers, specialists in agriculture, labor and commerce, and other related activities, should be handled on a public relations basis.

Again, critics of such a program will say, "But a consulting engineer doesn't want to be part of a propaganda program."

THE AMERICAN ABROAD

The answer to that is simply this: like it or not, designated or not, any American going abroad under Government sponsorship is considered to be a representative of our Government and he has propaganda value, either good or bad.

Studies have shown that we have neglected this phase of our getting along with people programs. We have sent billions of dollars abroad, and end up finding that the foreign nationals still don't like us. The reason? Perhaps some clique of Americans stationed abroad have formed a country club set where cocktail parties abound. In another, no effort is made to mingle with the native population, and, generally the attitude of those few Americans is one of superiority and pained acceptance that the non-Americans are a necessary evil.

Such things do happen. It is difficult to discover and correct them. It would be better to prevent them from happening in the first place. Only coordinated handling of these problems at high Government level can do the job. Language training and orientation are as important in maintaining a high level of national prestige abroad as are the dollar loans or the donation of surplus foods. Yet, these matters are left more to chance than to careful planning.

IMPROVING OUR POSITION

How, then, can a department devoted to improving our international public relations work to improve our position in the family of nations?

It can begin, as most public relations projects begin, by making a careful survey of the "publics" that are to be reached. It can catalog the problems, the places to be reached, the methods for meeting challenges. In short, it can help develop an empathy for the peoples and cultures of other nations. By understanding these, we can better know how we can operate to develop lasting alliances and permanent friendships.

We have a continuing problem of finding more avenues of communications with other peoples. An uneasiness exists in the minds of many who are interested in our oversea programs that this problem has not received the full attention that it should. Certainly, there are enough specific incidents which indicate a general failure in some parts of the world in getting our message to the people.

BETTER ORIENTATION

If we do nothing more than to develop better orientation and training programs for Americans going overseas, the entire project will be worthwhile. Over one and a half million citizens of the United States are scattered over the face of the globe, outside the continental limits of our country. Every day these Americans will be rubbing shoulders with nationals of other countries. With spirits filled with good will and pockets filled with money, they will make efforts to change the military establishments, the economic picture or the social behavior of these foreign nationals. Not always will Americans with a background developed in a competitive capitalistic system handle problems of old societies smoothly. How to avoid mutual misunderstandings is a real business with us—at least, it should be.

LANGUAGE BARRIERS

Language training has been so neglected, even among the diplomatic set, that primary communication between our citizens abroad and the native population of the country they visit often breaks down. Among our State Department Foreign Service officers only a small percentage can handle the language requirements of their posts. Among the military, the technical service personnel and others, the percentage must be dismally low.

All information about people of other countries should be made more readily available to citizens of our own countries. Just as we want to get more information about America into the hands of foreign nationals, it is just as important for us to know that modern Holland doesn't resemble the world of Hans Brinker as it is for the people of Holland to know that our midwesterners don't wear feathers in their hair. It would not be out of line for a department of international public relations to work through our schools, our domestic radio and television industry, the movies, and newspapers and magazines to give Americans at home understanding of our neighbors across the seas. Since we hope to expand and accelerate the exchange of persons programs, it is essential that we increase the basic knowledge about other peoples so our exchangees will not be poorly prepared to handle their assignments. Studies made among students going abroad indicate a pressing need for more information about foreign cultures and languages among our high school and college people.

CREATING UNDERSTANDING

There are numberless ways in which we can do additional work in the area of creating mutual understanding, and in which we can use our techniques of public relations to strengthen our world position.

Such a department would be able to give us more flexible programs. We need to be able to change the types of program to meet current needs. We need to be able to shift the emphasis, geographically, in our programs. Should the need arise to have short-term exchanges of labor or agriculture people in some specified area, we should be able to do it in a short time. If we need sociological resarch people to work for 2 to 4 years in a country struggling to rehabilitate itself, we should be able to carry on that type of program. But what we need is some central,

coordinating agency of Government which views these problems from the angle of improving our public relations abroad. In all our programs—military, economic, sociological—that has always been our aim. It is time we clearly defined it and put our experts to work on the job in some department of Government headed by an officer at Cabinet level so we can develop and operate a cohesive program of waging the cold war in such a manner that we can be certain to win it.

Must We Have a Marine Corps? Chairman Vinson Tells Why

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks I ask unanimous consent that a recent article entitled "Must We Have a Marine Corps?" by the distinguished and honored chairman of the House Armed Services Committee, the Honorable CARL VINSON, of Georgia, be printed in full in the RECORD.

In this brief account, prepared for the recent reunion of the Third Marine Division Association here in Washington, the distinguished chairman draws upon his vast experience and unequaled knowledge of the Nation's defense needs to answer affirmatively the question posed in the title of his article. Concisely and with irrefutable logic he has set forth the reasons, which over the years, have prompted the Congress to insist upon a strong, combat-ready Marine Corps.

I commend this article to all Members as one of the most comprehensive statements of the Nation's continuing need for this Corps, our principal force-in-readiness, it has ever been my privilege to read.

MUST WE HAVE A MARINE CORPS?—CHAIRMAN VINSON TELLS WHY

(By Congressman CARL VINSON, chairman, House Committee on Armed Services)

The Marine Corps is performing a vital role in helping preserve our national security.

It is my firm conviction that this Nation must have a Marine Corps embodying its historic characteristics of professionalism, versatility, readiness, and mobility.

As one who has long insisted on the Marine Corps being provided the manpower and weapons to discharge its proper roles and missions—which Congress so deliberately and clearly has written into law—I believe that the demands of national security require a Marine Corps prepared to discharge two principal functions:

(a) A combat-ready, striking force to swiftly seize key objectives on the outbreak of general war, and

(b) To serve as a fire brigade national force-in-readiness to support U.S. policy in the crises which will continue to characterize the so-called cold war for many, many year to come.

The Marine Corps, by tradition, experience, training, and inclination, is peculiarly qualified to do these vital jobs.

There has never been a significant period in the history of our Nation when we did not need a strong and ready Marine Corps.

As our Nation has progressed, become more powerful, and consequently assumed a greater role in world affairs, the need for an adequate Marine Corps has progressively increased. It has been evident, particularly since our Nation became a great world power as the result of the Spanish-American War, that a Marine Corps of meaningful capabilities was an indispensable element of our defense forces. Such a requirement stems neither from abstract theory nor mere sentimentality. Rather, the need for a Marine Corps of strong combat ability rests upon the very strategic and geographic nature of our Nation. While we are a Nation of vast land expanse, we are, in the final analysis, an island Nation. We are in every sense—strategically, economically, and geographically—a truly great maritime power. This very maritime character of our Nation requires that we maintain, in addition to our normal mobilization base, a constant strength—combat-ready Marine Corps to provide the landing forces essential to the balanced fleet.

The House Armed Services Committee, of which I am honored to be the chairman, has long taken the position, one consistently approved by Congress, that our Nation must take no chances in the matter of providing an adequate Marine Corps.

Consequently Congress, in 1947, wrote the specific roles and missions of the Marine Corps itno the law, overriding as it did so the objections of the Pentagon. These provisions of law recognized the historic attributes of the corps—readiness, professional proficiency, and the inherent mobility which Marine landing forces possess as a part of the balanced fleet. Also, the law recognized the irreplaceable experience that Marines have gained from more than a century and a half of close association with the Navy in the development and application of the Nation's sea power. Versatility and unsurpassed strategic mobility are salient characteristics of our balanced fleets in which the Marines ready forces play such a vital part.

However, in spite of this statutory emphasis of the intent of Congress and the sharp delineation of the roles and missions of the Marine Corps, the corps underwent a drastic and almost disastrous reduction that was halted only by the outbreak of Korean hostilities. As a result of a truly Herculean effort, characterized by a perhaps unprecedented combat mobilization of Reserves, the corps was able, through the mobility of its sister service, the Navy, to project itself into the Korean conflict. By timely arrival it staved off disaster in the Pusan perimeter. Then, again exploiting the mobility of our seapower, Marines spearheaded the amphibious assault at Inchon, raised the American flag at Seoul and then pressed the attack northward.

Once again, in Korea, the Marines had demonstrated to us all the indispensable value of a specially trained amphibious force-in-readiness.

Of course, as you will all remember that the Inchon landing, which turned the tide of battle in that conflict, happened only a few months after we had been told that there would be no more amphibious operations.

The Marine Corps did not believe that prophecy.

Fortunately for the Nation, neither did Congress.

After Korea, in order to make certain that our Nation would, in the future, be assured of a combat-ready Marine Corps to meet the many crises that would confront us in the continuing so-called cold war, Congress wrote into the National Security Act the required organizational framework of the Marine Corps. This amendment (Public Law 416, 82d Cong.) established the requirement that the Marine Corps should be maintained at three combat divisions and three air wings. This Congress did, not out of sentimentality but in recognition of the cold, hard fact that only the Marine Corps has the background, experience, special qualifications and intimate association with the Navy as a partner in the balanced fleets necessary to the performance of the versatile functions required.

The decision of Congress to assure such a ready force has been amply justified by the magnificent manner in which the Corps has performed the duty expected of it in the crises of Lebanon, Taiwan, Indonesia, Syria, and Suez. Marine availability and actual readiness to be used, if necessary, strengthened U.S. policy in each of these instances, and forestalled further Communist gains that could have assumed disastrous proportions for ourselves and the free world.

Lebanon, in my view, will stand as a salient example of the great dividends which our Nation reaps from Marine Corps-Navy partnership in the application of our seapower. The time interval between the decision to land Marine forces in Lebanon and the time of landing was extremely brief. The Marine units hit the beach exactly on time and moved inland with precise, tactical efficiency. As a result, U.S. influence in the Middle East was enhanced. Another possible Russian power grab in the Eastern Mediterranean littoral was thwarted.

Such an example of military and naval efficiency is not accidental. An amphibious operation, the most difficult and intricate of all military operations, involving as it does the transition from sea to land, cannot be improvised. The smoothness and rapidity of the Marines' landing in Lebanon can only be explained by the long experience of our Marines in their difficult amphibious specialty and their generations of close knit relationship with the Navy. These two services, which together comprise the fighting elements of the Department of the Navy, have worked together so long and so well in the exercises of seapower that it becomes almost an intuitive matter for them to move quickly to a troubled area and apply the precise degree of necessary military power.

Lebanon was an eloquent example of the value of the balanced fleet. Only the United States has been successful in developing this unequaled instrument for the application of true seapower. A basic element of its structure is the Fleet Marine Force, a force of amphibious troops no other nation, no other fleet, possesses. Together with the Navy elements of the fleet, this integral landing force gives the Nation and the fleet commander the balanced force uniquely the product of American genius.

Lebanon is a recent example. But it has not been and it will not be the only example of how necessary the Navy-Marine Corps team is in the long and continuing struggle against the unceasing attempts of communism to encroach against the free world. When one looks at the globe of the world in the light of the fact that the basic objective of Soviet communism is the enslavement of the world, we realize only too clearly that in the years ahead there will be more Lebanons, more Quemoys, and more Koreas.

Such a situation establishes a national requirement for the Marine Corps' capability of swift and effective response to international crises.

The Marine Corps' obligation to develop the most modern and effective amphibious doctrine and techniques of any armed force in the world is thus underscored by strategic requirements as well as those of the law itself.

The vertical envelopment concept, combining the airborne versatility of the transport helicopter with the range of the aircraft carrier is an example of how well the Marine Corps has discharged its duty in advancing the science of landing operations.

This adaptation of the helicopter to modern amphibious assault is also a fine example of the versatile manner in which Marine

aviation supports Marine ground forces. The relationship of air and ground elements in the Marine Corps is, in many ways, unique in modern military organization. The effectiveness of Marine aviation results directly from the fact that it has the specific and specialized function of being a purely supporting arm.

Marine aviation must focus its attention and total effort on the perfection of its close supporting techniques. If it expands its activity beyond this specific function of being a supporting arm, it will inevitably duplicate tactical aviation of the Air Force and thus be in jeopardy of being assimilated or eliminated.

In enumerating some of the reasons for Marine Corps efficiency and success, one must never forget the Marine Corps' emphasis on the individual fighting marine. There is no doubt but what a large measure of the efficiency and success of the corps results directly upon its emphasis on the importance of the individual fighting marine. In these days of great scientific advancement and reliance on technological devices, the importance of the individual is frequently overlooked. This, however, has not been the case in the Marine Corps. The esprit, the dedication to duty and the self-reliance which continues to characterize the corps is a collective reflection of the important role that each individual marine—officer and enlisted—performs in discharging the missions assigned to the corps.

In the troubled international situation that confronts us now and which will continue to confront us through at least the foreseeable future, the Marine Corps has a vital and important role to perform. It has long enjoyed the confidence of Congress and the Nation. I am confident that the corps will continue to justify our Nation's confidence as the first echelon of our Nation's limited war forces.

Hawaii: The Aloha State

EXTENSION OF REMARKS
OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. ASPINALL. Mr. Speaker, with the advent of Hawaii's admission into our Union I believe it is essential that each of us be well informed on the background of our 50th State. In the first of three articles in the current issue of State Government, Gov. William F. Quinn describes the Aloha State—including its background as a kingdom, its governmental status as a Territory of the United States, and its social and economic character today. In doing so, Governor Quinn makes it clear why our new partner in statehood is a great deal more than a "Paradise of the Pacific."

Mr. Quinn writes as follows:

HAWAII: THE ALOHA STATE

(By William F. Quinn, Governor of Hawaii)

History was made for Hawaii on March 12, 1959. On that day, the people of the mid-Pacific territory achieved a long-sought goal. The 86th Congress finally gave approval of a bill providing for admission of Hawaii as the 50th State.

The statehood bill was signed with "great satisfaction" on March 18 by President Eisenhower. When the citizens of Hawaii decide in a forthcoming plebiscite[1] on making Hawaii the 50th State, the President said, "they will demonstrate anew to the world the vitality of the principles of freedom and self-determination—the principles upon which this Nation was founded 172 years ago."

FIRST-CLASS CITIZENSHIP DAY

Although formal admission of Hawaii depends upon the approval of statehood and related questions at the plebiscite on June 27 and upon an official proclamation of admission by the President later in the year, there is little doubt that March 12 is marked in the minds of Hawaii's people as the day on which they became first-class citizens of the United States.

There was excited anticipation at both ends that eventful day. Direct oversea telephone lines connected Iolani Palace—the Territorial capitol—with the House of Representatives in the Nation's Capitol. The night before the Senate had passed the bill overwhelmingly, by a 76 to 15 vote.

As the House rollcall reached the 218 affirmative votes needed for passages, I telephoned a signal from a booth just off the House floor, to start the celebration in Honolulu. The final House vote was 323 to 89 in favor of the bill.

In Honolulu, civil defense sirens blew a steady blast to announce the event, firecrackers exploded, and auto horns added to the noise of celebration. March 12 and 13 were declared official holidays. Schools were closed. Churches were filled with people offering prayers of thanksgiving. The millenium had arrived.

PREANNEXATION DEVELOPMENT

The newest State lies in the Pacific Ocean 2,090 nautical miles southwest of San Francisco. It consists of eight major islands and numerous small islands with a total area of 6,423 square miles. From southeast to northwest the principal islands are Hawaii, Kahoolawe, Maui, Lanai, Molokai, Oahu, Kauai, and Niihau. Honolulu, a modern city on the island of Oahu, is the capital of the Territory and will be the capital of the State.

Hawaii's recorded history begins in 1778 when Capt. James Cook landed in the islands and found a feudal society of Polynesians, with each major island goverened by a hereditary chief as an independent kingdom. By 1810 King Kamehameha the Great had united all the islands under his rule.

The association of Hawaii with the United States has been long, close, and significant. American Congregational missionaries, first arriving in 1820, had a profound influence on the social and governmental institutions of the Kingdom of Hawaii. In addition to bringing the Christian religion to a formerly polytheistic society, the missionaries reduced the native language to writing, established schools to develop a literate population, and advised the royal families on problems of government, health, and business.

Hawaii has enjoyed some measure of constitutional government since 1840 when King Kamehameha III proclaimed its first constitution which, in addition to a house of nobles, provided for seven representatives to be informally selected by the people. A new constitution adopted in 1852 provided for universal manhood suffrage.

Pressure for annexation to the United States was stimulated in the mid-19th century by the growing sugar industry, the whaling interests and the California gold rush. After years of negotiation a treaty of commercial reciprocity between the United States and Hawaii was put into effect in 1876. Under this treaty Hawaiian sugar was allowed to enter the United States free of duty, and the identification of American and Hawaiian interests was clearer than ever. Although American influence was strong, Hawaii remained an independent kingdom until 1893 when the reigning queen, Liliuokalani, was deposed and a provisional government formed to negotiate for union with the United States. For the brief period from July 5, 1894 until steps leading to annexation of the islands by the United States could be completed, the Republic of Hawaii carried out the functions of government.

TERRITORIAL STATUS

A joint resolution providing for annexation was adopted by the Senate and House of Representatives of the U.S. Congress on July 6, 1898 and signed by President McKinley on the following day. On August 12, 1898, the Hawaiian flag was lowered from the staff on Iolani Palace and the Stars and Stripes of the United States of America were raised as formal transfer of sovereignty to the United States was accomplished. In April 1900, Congress passed the Hawaiian Organic Act, which gave Hawaii the status of an incorporated, organized Territory and extended to its citizens the protection of the laws and Constitution of the United States.

Under the Organic Act, the Governor and the Secretary of the Territory (who corresponds to a State Lieutenant Governor) have been appointed for 4-year terms by the President of the United States, subject to U.S. Senate approval. Judges of the Supreme Court and the circuit courts have also been appointed by the President. In Congress, Hawaii has been represented by one Delegate to the House of Representatives, who can introduce bills and serve on committees but who has no vote. Within the limitations imposed by territorial status, Hawaii has long functioned to a great degree as a State, and any public official from any of the other States would find much that is familiar to him in Hawaii's government. The elected legislature, the appointed executive and judicial branches, all function in traditional American style.

GOVERNMENTAL STRUCTURE: FAMILIAR PARALLELS

Like most States, Hawaii has in recent years been concerned with the multiplicity and overlapping of government functions, and for nearly a decade it has given serious study to the reorganization of Territorial agencies mandated by the State constitution. At present, State officers such as the attorney general and the treasurer, heads of some 30 administrative agencies and members of numerous boards and commissions with administraitve or regulatory duties, are appointed by the Governor, subject to the confirmation of the Territorial senate. Health, welfare, libraries, education, and public works are among the governmental activities and functions that are maintained by the Territorial government. As a Territory, Hawaii has been eligible for most Federal aid programs.

The bicameral territorial legislature is typically American in organization and procedure. Until reapportionment was brought about by act of the U.S. Congress in 1956, imbalance in representation between urban and rural areas existed in Hawaii, just as it does in many mainland States. Under reapportionment the senate was increased from 15 to 25 members, with the rural areas retaining control, while the house of representatives went from 30 to 51 members, giving numerical control to the Oahu metropolitan area. The total of 76 members gives Hawaii one of the smallest State legislatures in the country.

[1] The plebiscite and a primary election will have been held when this issue of State Government appears. They were scheduled for June 27. A final election was set for July 28 to select the Governor of the State, the Lieutenant Governor, the legislature, two U.S. Senators and one U.S. Representative.

A significant step forward in judicial administration was taken by the last territorial legislature this year with the creation of an administrative office in the courts, under the Chief Justice of the Supreme Court.

Hawaii has only 22 governmental units, far fewer than any State in the Nation. The low number is indicative of a simplification and centralization of structure that might be the envy of many a State or large city faced with complex overlapping of government functions and confusing duplication of government services. In addition to the territory, there are the city and county of Honolulu, three neighbor island counties of Hawaii, Kauai, and Maui, and 17 special districts (most of them soil conservation districts). A fourth county, Kalawao, is coterminous with the Hansen's disease settlement at Kalaupapa, Molokai and is administered by the territorial board of health. Hawaii has no cities or towns as governmental units, and no school districts. The city and county of Honolulu is a single unit of government covering the whole island of Oahu. This is probably the only metropolitan area in the United States which is entirely governed by one unit of local government.

LOCAL GOVERNMENT IS CENTRALIZED

The high degree of centralization present in Hawaii's governmental pattern is quite startling to a mainlander familiar with considerable local autonomy and numerous small jurisdictions. For example, a Territory-wide system of public schools is operated by the department of public instruction as a single unified school district, although for administrative purposes the Territory is divided into five districts responsible to the superintendent of public instruction. Each county is represented among the commissioners of public instruction. The construction and maintenance of schoolbuildings are the responsibility of the counties.

Members of county police commissions, liquor commissions, and three out of four county library managing boards are appointed by the Governor.

Counties are governed by elected boards of supervisors headed by a chairman or, in the case of the city and county of Honolulu, by a mayor. Certain other county officers are also elected. The 30th legislature in 1959 passed, with some amendments, a strong mayor charter for the city and county of Honolulu, which had been approved by voters at a special election in June 1958.

FINANCE

Under the Organic Act, Hawaii has a taxing power equal to that of any mainland State. A general excise tax, personal and corporate income taxes, gasoline, liquor, and tobacco taxes are the chief revenue sources at the territorial level. A real property tax is collected by the Territory for each of the several counties. The net assessed valuation of real property for the calendar year 1958 was $1,086 million, and the average property tax was $16.22 per $1,000 of assessed value.

During the fiscal year ended June 30, 1958, territorial receipts (both general and special funds) amounted to $151,301,000, while disbursements totaled $148,089,000. Territorial bonded debt for 1958 was $94,357,000.

INTERSTATE COOPERATION: POLITICAL PARTIES

As a territory, Hawaii has recognized the advantage of participating to the fullest extent possible in organizations and compacts of an interstate character in order to reap the benefits of cooperation with the rest of the Nation on common problems. For example, Hawaii has joined the Interstate Parole and Probation Compact, the Western Interstate Commission for Higher Education, the National Conference of Commissioners on Uniform State Laws, and has been active in the Governors' Conference and other national gatherings of public officials.

Both major political parties are active in the territory. During the 20 years of Democratic national administration, the presidentially appointed Democratic Governors faced Republican-controlled legislatures. Since 1955, the Democratic Party has had a majority of legislative seats, while the Governors have been Republicans. Both political parties are seeking new strength and effectiveness as they prepare for the first State elections and the selection of the first Senators and Representative to the U.S. Congress.

A PARADISE-PLUS

Hawaii has been dubbed the "Paradise of the Pacific," and the familiar cartoon portrayal of a hula-skirted maiden, backed by a little grass shack under waving palm trees, comes to mind. True, Hawaii has palm trees and hula dancers, but the stereotype of the cartoons must give way to the realities of contemporary Hawaii. Gleaming sands of tropical beaches, the sound of rolling surf, the richness of flowers and foliage are all part of present day Hawaii. The average temperature in Honolulu is 75 degrees and trade winds from the east of northeast prevail during most of the year. From the snowcapped peaks of Mauna Loa and Mauna Kea to spectacular Waimea Canyon, Hawaii is indeed a paradise for visitors and residents alike.

But Hawaii is more than a tropic paradise. It is also known as the "Crossroads of the Pacific" because of its strategic location on the air and sea lanes between East and West. The 50th State is about 10 hours by air from the west coast of the mainland United States and will soon be less than 5 hours' travel by jet flight.

As a military bastion for America's Armed Forces, Hawaii boasts such famous military heaquarters as Pearl Harbor, Fort Shafter, Schofield Barracks, Camp H. M. Smith, Hickam Air Force Base, and Kaneohe Marine Air Station.

PATTERNS OF THE ECONOMY

Hawaii's civilian population has been growing rapidly for several years and was estimated at 575,771, in July 1958. The population is youthful, with 43 percent below 20 years of age. Over three-fourths of Hawaii's people are on the island of Oahu, whose population and economy have to some extent developed at the expense of the outlying islands. While territorial unemployment is low and territorial income and population are both rising, there has been decline in business activity and a commensurate decrease in employment and income of islands other than Oahu. Government and industry are both concerned with finding means for developing a balanced economy in all parts of Hawaii.

Diversification of industry and economic activity is clearly needed and is to some extent being achieved. In large measure Hawaii is an agricultural economy, although the agriculture is large-scale, highly mechanized and equivalent to major industry. Hawaii is also a service oriented area. Federal expenditures, primarily by the military, rank as the territory's largest single source of income, having amounted to $385 million in 1957. Other major sources of income are the sugar industry ($147 million in 1957), pineapple ($112 million), construction ($135 million) and the tourist trade ($78 million). Diversified agricultural crops, livestock products, coffee and fishing are other important segments of the economy. The growth of a garment industry, construction of an oil refinery and industrial park, a steel rolling mill and other fabricating plants are signs of healthy variety in an essentially agricultural community.

Extensive bauxite deposits, particularly on the island of Kauai, offer prospects for a new basic industry. Efforts are being made to find a commercial use for the vast lava wastes created by volcanic action.

The gross territorial product reached a new high in 1957 of about $1.4 billion. Personal income for the same period increased over previous years to $1.09 billion, with per capita income amounting to $1,821. Federal internal revenue collections for 1957 amounted to $166 million, more than the amounts paid by each of 10 other States. A favorable balance of payments with the mainland United States has been maintained since 1952. In 1957, Hawaii earned $856 million outside the territory, or $23 million more than it spent that year.

Hawaii has relatively little land to open for homesteading purposes. Much of the land is held by a few owners, a pattern of ownership which has prevailed since King Kamehameha III divided his land with the nobles and people of Hawaii in 1848. There is great pressure for land, especially on the island of Oahu, and considerable legislative and executive attention has been given to the problem of making the most effective use of the limited areas available for public and private development. Efforts to create new land on Oahu by filling offshore reef areas, acquisition by the territory of land now held by the Federal Government, and acceleration of efforts to make territorial lands available to the public are some of the approaches being taken to the land problem.

CULTURE AND EDUCATION

In the area of culture Hawaii is a well rounded community with a fine symphony orchestra, a community theater which presents hit musicals while the original cast still performs on Broadway, an academy of arts renowned for its remarkable collections in Asiatic art, and the Bishop Museum, which is world famous as a research center in the history and science of the Pacific area.

The University of Hawaii, a land-grant institution with over 7,000 students currently enrolled, corresponds to mainland State universities and offers accredited undergraduate and graduate programs in the arts and sciences, engineering, nursing, and education, among other fields. Tropical agriculture, marine biology and Far East studies are, of course, particularly well developed.

An outstanding feature of life in Hawaii, commented upon with appreciation by visitors from the world over, is the harmony among the Americans of many races and ancestries who make up the population of the new State. Equality of opportunity is a reality, with business, professions and government service open to all qualified persons regardless of ethnic background. About 87 percent of the entire population are American citizens.

Successful operation of the International Cooperation Center under the Governor's Office, establishment of an overseas training program and an Asian studies program at the University of Hawaii are indicative of the areas of world understanding to which Hawaii can contribute. In a recent address Secretary of the Interior Fred A. Seaton emphasized Hawaii's role as a trade and cultural center for the entire Pacific area. With its roots in the East as well as in the West, Hawaii can have a significant role as a State of the Union, on an equal footing with the other 49.

For its State nickname, Hawaii has chosen to be known as "the Aloha State," a phrase which sums up, through the use of the Hawaiian word so rich in meaning, the warm friendship and sincere hospitality which characterize the outlook and attitudes of the citizens of the 50th State.

Joint Declaration Issued by the Governments of Ghana, Guinea, and Liberia at Sanniquellie, Liberia, on July 19, 1959

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and joint declaration:

GHANA INFORMATION & TRADE CENTER,
New York, N.Y., July 29, 1959.
Congressman ADAM CLAYTON POWELL,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN POWELL: I forward, herewith, texts of joint declaration and joint communique issued by the Governments of Ghana, Guinea, and Liberia at Sanniquellie, Liberia on July 19, 1959.

Very sincerely,

R. O. MENSAH,
Press Attaché.

JOINT DECLARATION ISSUED BY THE GOVERNMENTS OF GHANA, GUINEA, AND LIBERIA AT SANNIQUELLIE, LIBERIA, ON JULY 19, 1959

Resolved to assist, foster, and speed up the total liberation of African nonindependent territories whose peoples are struggling for national independence and self-determination, racial equality, and human dignity, conscious of the fact that freedom, equality, justice, and dignity are noble objectives of all peoples and are essential to the achievement of the legitimate aims and aspirations of the African peoples, determined to bring about unity, cooperation, harmony, coherence, and mutual understanding among ourselves, bearing in mind the historical differences among the peoples of Africa in various fields, but convinced that joint action is necessary to attain our common purpose, the President of the Republic of Liberia, the President of the Republic of Guinea, and the Prime Minister of Ghana, after a frank exchange of views, have agreed on the necessity for immediate action, and, in the light of this, they have reviewed the two communiques issued by Ghana and Guinea, on the one hand, and the official Gazette Extraordinary issued by Liberia, on the other hand, and have proposed the holding of a special conference in 1960 of all independent states of Africa, as well as nonindependent states which have fixed dates on which they will achieve independence, to discuss and work out a charter which will achieve their ultimate goal of unity between independent African states.

They have agreed further on a declaration of principles, which will be presented to the special conference of independent African states, as well as those nonindependent states invited to participate, as the basis for the discussions of the special conference.

These principles are:

1. The name of the organization shall be the Community of Independent African States.

2. Africans, like all other peoples, have the inherent right to independence and self-determination and to decide the form of government under which they wish to live.

3. Each state or federation, which is a member of the community, shall maintain its own national identity and constitutional structure. The community is being formed with a view to achieving unity among independent African states. It is not designed to prejudice the present or future of international policies, relations, or obligations of the states involved.

4. Each member of the community accepts the principle that shall not interfere in the internal affairs of any other member.

5. (a) The acts of states or federations, which are members of the community, shall be determined in relation to the essential objectives which are freedom, independence, unity, the African personality, as well as the interest of the African peoples.

(b) Each member-state or federation shall, in its acts or policies, do nothing contrary to the spirit and objectives of the community.

6. (a) The general policy of the community shall be to build up a free and properous African community for the benefit of its peoples and the peoples of the world and in the interest of international peace and security.

(b) This policy shall be based essentially on the maintenance of diplomatic, economic, and cultural relations, on the basis of equality and reciprocity, with all the states of the world which adopt a position compatible with African interests and African dignity.

(c) Its main objective will be to help other African territories, subjected to domination, with a view of accelerating the end of their nonindependent status.

7. The community shall set up an economic council, a cultural council, and a scientific and research council.

8. Membership in the community shall be open to all independent African states and federations, and any nonindependent country of Africa shall have the right to join the community upon its attainment of independence.

9. The community shall have a flag and an anthem to be agreed upon at a later date.

10. The motto of the community shall be "Independence and Unity."

W. V. S. TUBMAN,
President of the Republic of Liberia.
SEKOU TOURÉ,
President of the Republic of Guinea.
KWAME NKRUMAH,
Prime Minister of Ghana.

JOINT COMMMUNIQUE ISSUED BY THE GOVERNMENTS OF GHANA, GUINEA, AND LIBERIA AT SANNIQUELLIE, LIBERIA, ON JULY 19, 1959

We, the President of the Republic of Liberia, the President of the Republic of Guinea, and the Prime Minister of Ghana, meeting at Sanniquellie, Republic of Liberia, from July 15 to 18, 1959, having reviewed the matters of common concern to our respective States and Africa in general, have decided that:

1. Cameroons: We deplore the present situation in that territory, and we consider that free elections under United Nations supervision before independence is the most effective and democratic means of solving the present crisis. We appeal to the conscience of the world and the members of the United Nations to support our efforts to bring the matter before the next session of the General Assembly of the United Nations.

2. Algeria: We reaffirm the terms of the resolution adopted at the Conference of Independent African States held in Accra in April 1958, and support the inscription of the Algerian question on the agenda of the next session of the General Assembly of the United Nations. We will consider the recognition of the Provisional Government of Algeria at the forthcoming Conference of Foreign Ministers of the Independent African States to be held in Liberia in August 1959.

3. Racial discrimination: We condemn racial discrimination in any form wherever it exists, and in particular the policy of apartheid practised in South Africa, and will do all in our power to implement the provisions of the universal declaration of human rights.

4. South West Africa: We maintain that this territory is in fact a trust territory of the United Nations, and as such the United Nations cannot relinquish its legal and moral responsibilities to the indigenous inhabitants, who are entitled to the same treatment given to other trust territories. Consequently, we will request the United Nations to give further consideration to this question, declare the territory not a part of South Africa, and fix a date for the independence of the trust territory of South West Africa.

5. Nuclear tests in the Sahara: We deprecate France's insistence on carrying out these tests in Africa, and appeal to all African peoples, including those in the French community, and to all members of the United Nations to realize the destructive effects of such tests and associate themselves with us in our endeavor to dissuade France from embarking upon such a devastating course. We express our strong disapproval of all nuclear tests, and appeal to the conscience of all peoples to condemn the production and use of nuclear weapons. We specifically appeal to those nations which produce such weapons to put an end to such tests.

6. Cooperation and unity of action: Touching their mutual relationships, we agree to consult together on all international questions, and insure unity of action at the United Nations.

7. African culture: Considering African culture as one of the essential elements in the struggle against colonialism and the assertion of African dignity and personality, we have decided to make the rehabilitation and diffusion of African culture an imperative national duty.

W. V. S. TUBMAN,
President of the Republic of Liberia.
SEKOU TOURÉ,
President of the Republic of Guinea.
KWAME NKRUMAH,
Prime Minister of Ghana.

What's in a Name

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. FORAND. Mr. Speaker, while many of us are striving to find a solution to the important problem of providing health care of our aged, and while most of the opponents to my bill, H.R. 4700, are also working to solve the problem by other means, I regret to say that among the opponents of my bill are some whose opposition is so vehement that they have become abusive.

My bill, H.R. 4700, would provide insurance against the cost of hospital, nursing home and surgical care under the social security system.

As an example of the blind opposition and bitterness of some of the opponents to my bill I cite the case of Dr. Herbert Berger, president-elect of the New York State Society of Internal Medicine.

Dr. Berger recently was a witness before the Ways and Means Committee during hearings on the Forand bill, H.R. 4700. He admitted that he was accepting fees from the New York City Department of Welfare but at the same time opposed H.R. 4700 which he termed "communistic legislation."

Dr. Berger was placed in his proper light, I feel, in a weekly news column written by Dewey Anderson, executive director of the Public Affairs Institute, under date of July 17, and under leave to extend my remarks I include this column. It follows:

WHAT'S IN A NAME?

In the ornate hearing room of the House Ways and Means Committee, with the American eagle of freedom spreading its protective wings over all, Herbert Berger, M.D., F.A.C.P., president-elect of the New York State Society of Internal Medicine recently took the witness stand. He was testifying on the Forand bill to provide medical and hospital care to the aged sick. And he was against the measure. Why?

Because, the eminent physician said: "* * * A nation cannot survive half socialized and half free enterprise any more than, prior to 1860, our country could endure half free and half slave. Certainly if we embrace this much socialism then it will follow that the ancillary medical professions, pharmacy, hospital management, nursing, and dentistry will be forced to accept the same ideology, which is so foreign to that which has made this country great. * * * Does it not seem inconsistent that we should be fighting such communism in Geneva while introducing legislation supporting it in Washington?"

Then followed a curious inconsistency in the doctor's reasoning, for he advocated that instead of using the social security system for handling health aid we should make direct public assistance payments to the aged.

"If these people were given a full day's pay for a half day's work their economic and emotional problems would disappear," he declared.

Decrying social security on the one hand as socialistic and even communistic, then advocating a program which would put the retired back to work at half time and full pay, the doctor would let the aged buy privately the medical services they needed and pay for these services out of only half-earned money. The other half would be a contribution of society, the very socialism which he hates.

One wonders what the doctor says as he crosses Brooklyn Bridge, built at public expense and used the same way—"never should have been built, ought to be run privately for profit." Or, as he sends his children to public school, "never should have been opened, ought to pay privately for this service."

Bringing another contradiction right home, Congressman FORAND elicited the fact that Dr. Berger served the New York City Department of Welfare as a consultant in a city-approved nursing home for 200 patients, and the 2,500 patients at the publicly supported farm colony. The doctor got his payment for these services right out of the public till, without ever complaining except as to the size of the fee. "I give service for $5 which I get $200 for from a private patient," the doctor told the Congressman.

Congressman FORAND questioned the witness at some length regarding his use of the Red-baiting word "Communist" applied to this form of social legislation, and the doctor stuck by his guns. He just believes this is communism. He thinks the social security program is a long step toward a denial of individual freedom, not the means of underwriting freedom for the great masses of our people.

One wonders whether Dr. Berger, chosen spokesman for his profession, is at all representative. Or whether, in attaining such a high proficiency in their chosen profession, doctors have ever been exposed to the social sciences. Or whether, in opposing legislation to provide medical and hospital care to the aged on philosophical grounds, they have ever run across and pondered such a solid piece of philosophy as Hobhouse's remark in his "Elements of Social Justice":

"The organizer of industry who thinks he has 'made' himself and his business (or profession) has found a whole social system ready to his hand in skilled workers, machinery, a market, peace and order—a vast apparatus and a pervasive atmosphere, the joint creation of millions of men and scores of generations. Take away the whole social factor and we have, not Robinson Crusoe with his salvage from the wreck and his acquired knowledge, but the naked savage living on roots, berries, and vermin."

Perhaps the doctor and his colleagues would like to ponder still more about their philosophic position, taking into account in so doing that society has provided them with the major costs of their education, surrounded them with some $8 billion worth of hospitals and operating rooms, a whole array of modern paraphernalia without which they could not do their highly skilled and socially necessary job of tending the sick, and for which they do not pay a cent directly.

In this modern day, cooperation of equally free men and women is essential. That it is done under laws voted by the peoples' representatives, and administered in the public interest, is the guarantee of the liberty of the individual. Whenever the people decide that they want the cooperation made possible under the social security laws extended to the health and material care of the aged who are no longer able to provide it themselves, this is in keeping with the freedom under law we have tested so amply as both good and democratic. Such is the judgment of our history.

Cold War Weapon

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of July 24, 1959.

COLD WAR WEAPON

Although differences have been expressed on details, impressively widespread support has been shown before the House Ways and Means Committee for legislation offering tax incentives for investment of American capital abroad.

In principle, at least, three Government departments—State, Commerce, and Treasury—as well as numerous spokesmen of industry have indorsed the idea as one that would provide an added weapon in the cold war political-economic competition with the Soviet Union. Implementing legislation, containing several proposals by which taxes would be eased on oversea earnings of American firms, has been introduced by Representative BOGGS, Louisiana Democrat. While industry witnesses thus far heard by the House committee have been almost uniformly approving, departmental spokesmen have suggested qualification on two major details.

One of these, encouraging American firms to set up domestic subsidiaries to carry on foreign business, would permit deferral of taxes on the earnings of these subsidiaries until the earnings are sent back to the United States. Government witnesses, most anxious that the oversea investment be channeled to underdeveloped countries, suggested that the deferral not apply to earnings in countries already highly developed industrially. The Treasury Department also recommended that the provision apply only to corporations which do not earn more than 50 percent of their gross income from exports. The Treasury likewise recommended against granting a reduction of 14 percentage points in the present 52 percent corporation income tax to all firms doing business abroad—questioning again that such a broad provision would be an effective incentive for investment in the areas most desired, namely, in the under-developed countries.

Despite these qualifications, however, the administration has made it clear from the beginning that it favors a greater flow of American venture capital abroad and that tax incentives provide a feasible method to accomplish the purpose. On this basis, prospects are encouraging that a final formula may be worked out within the framework of the BOGGS bill that will stimulate this type of enterprise.

You Can't Eat It

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. LANE. Mr. Speaker under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial on the Purple Heart decoration, which was published in the National Tribune, the Stars and Stripes, on July 30, 1959:

YOU CAN'T EAT IT

These are harsh words especially when they are applied to the Purple Heart decoration bestowed by the Government for wounds received in battle.

They were expressed in a letter from a discouraged veteran who wears the medal, in a letter written recently to a Florida newspaper. Here is how the veteran tells his story:

"Perhaps the greatest travesty of American justice is being perpetuated right under our noses. I speak of the disabled veteran, the man who served his country until he was returned to civilian life classified 'Living Dead.'

"From personal experience I have found that it is easier to gain employment if you have been paroled from a penal institution than it is to ask for work being a disabled vet.

"The vet is shunted from one agency of the Government to another. No one seems to be able to coordinate the facilities available.

"Should you tell the truth about your physical limitations? If you do they are polite but the position has just been filled.

"Until such time as people realize that disabled vets want no exceptional consideration, but rather the chance to prove they can be useful workers, there will be a growing feeling of discord which will eventually break the morale of the disabled and make them easy prey to Communist way of thinking.

"I have found out you can't eat a Presidential citation, or a Purple Heart."

As we have said, these are harsh words used as they were by the veteran but, in reality, his words are only the expression of

a discouraged and disillusioned man and they speak for many like him who find it impossible to secure decent employment because of a battle-incurred disability.

It is true that certain firms throughout the country have made a serious effort to find a way to employ our war disabled but in far too many instances the fact remains that a good many employers are guided only by their selfish instincts and are quick to deny aid to worthy and willing jobseekers.

America for the most part has forgotten the service rendered by wearers of the Purple Heart and the sacrifices they made in order to be worthy of that proud decoration. As we once heard another cynical veteran say, speaking of a war decoration, "that and 10 cents will get you a cup of coffee." Gratitude, apparently dies out as soon as an armistice is signed.

Congressmen Have No Right To Peddle Influence

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. MACK of Illinois. Mr. Speaker, as a member of the Legislative Oversight Committee, I have taken an active part in exposing undue influence by the executive departments. While I fully realize that the regulatory agencies were established as an arm of the Congress, I feel that the Members of Congress should not intervene in proceedings before these Federal agencies.

One of the outstanding Republican newspapers has written a fine editorial on this subject, which I felt might be of interest to the Members of the House. Under leave to extend my remarks, I wish to include this editorial which appeared in the Decatur Herald on July 27, 1959:

CONGRESSMEN HAVE NO RIGHT TO PEDDLE INFLUENCE

To Illinois' Senator EVERETT MCK. DIRKSEN, the public is indebted for his candid remarks about congressional influence being applied to executive agencies.

The Senate Republican leader was speaking on a bill which seeks to bar anyone, including Members of Congress, from making informal approaches to quasi-judicial Federal agencies about official matters.

Washington, the Senator says, "is a big, baffling, labyrinthine Government in which even Senators and Representatives get lost and cannot find "where the authority in a certain field rests."

Senator DIRKSEN said he will continue to help constituents find their way around official Government circles "until there is a mandate in the law which says it is wrong and that I will be put in jail for doing it." He added that if such a law is passed, "I shall have outlived my usefulness in public life."

The Senator may be missing the mark. Members of Congress will continue to act as Washington agents for their constituents, within the limit of their time and resources. Their Washington staffs will continue to make appointments, procure necessary information, and even open some doors not otherwise open for constituents having legitimate business with the Government.

But it is not proper for a Member of Congress to attempt to influence the judgment of a Federal administrator on a case pending before him, any more than it is proper to attempt to influence a Federal judge in a case at law.

Sherman Adams, once powerful assistant to the President, was forced out of public life by congressional revelations of his intervention in proceedings before a Federal regulatory agency on behalf of a powerful friend. It is no more justified when a Congressman exercises such influence.

Congressmen, too, are sometimes found to have a conflict of interest between their private holdings and an area of public concern in which they are called upon to legislate. This conflict is no more excusable on Capitol Hill than in an executive agency.

A Member of Congress has every right to help a constituent find the right door in official Washington. But he has no right to enter in an attempt to do a favor for a friend. Senator DIRKSEN should make it clear that he believes this, too.

John Paul Jones

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 13, 1959

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the East Side News, a weekly publication with wide circulation in the 19th Congressional District of New York:

FIGHTER FOR FREEDOM: JOHN PAUL JONES, 1747–92

(By Harry H. Schlacht)

We salute John Paul Jones, our greatest naval hero. We honor our defender of democracy. We hail the 212th anniversary of his birth. His name is revered by all Americans. His fame walks the pathway of the stars.

Biography is the key to history. The greatest souls of history are those who conquered in the face of adversity; who hitched their chariot to the star of hope; who snatched immortality from the ruins of time. Such a man was John Paul Jones.

Let us raise the curtain that conceals the past. Let us illustrate the lofty patriotism that characterizes the Revolutionary era. Let us contemplate the life and service of John Paul Jones, one of the most glorious in the galaxy of American immortals.

He was an immigrant. He was born John Paul at Kirkbean, Scotland, July 6, 1747, and died at the age of 45 in 1792. He settled in Fredericksburg, Va., in 1773, and added Jones to his name. He entered the American Navy at the outbreak of the American Revolution and was commissioned lieutenant on December 7, 1775. He was promoted to captain in 1776 and made a successful cruise as commander of the *Ranger* in waters around the British Isles in 1778.

His story reads like a fairy tale. His life rises to the simplicity of an epic. His deeds will never cease to excite men with the splendor of events and inspire them with the majesty of his achievements.

His supreme courage, with heroic endurance, with unfaltering faith in God, he became one of the elect of Americans. He was the trusted friend of Washington, Jefferson, and Franklin. He was the personification of valor. He was the foremost naval commander of the Revolution.

His genius blew the breath of life into the drama of an infant republic. His deeds were the inspiration of the dawning sea power of the new world. His services were of the highest moment to the glory of the nation. He won his battles not by ships, but by his genius. He was the conqueror of the conquerors of the sea. He was the Bayard of the blue waters.

On water he was the wizard of the sea. On land he was the master of diplomacy. He believed in the royalty of man. He believed in the sovereignty of the citizen. He believed in the matchless greatness of the republic. Love of liberty was the master passion of his soul, and he longed to have his name and fame associated with his adopted country—America.

Whose blood does not run faster, Whose blood does not run warmer, When he reads the thrilling exploits of John Paul Jones. What American has not treasured up in his mind Captain Jones' bloody sea skirmish with the British *Serapis*. "Are you prepared to surrender," shouted the British captain. And Captain Jones, commanding the *Bonhomme Richard* in the thickest of combat, hatless and begrimed with powder, the very incarnation of battle, shouted the historic words: "I have not yet begun to fight."

By the inspiration of his example, he forged weaklings into giants. He captured his opponents. He snatched victory from defeat. He transferred his crew to his prize. Just in time to see his own ship *Bonhomme Richard* sink beneath the waves with the Stars and Stripes floating from the mast.

He was the first to hoist our flag upon a man-of-war. He was the first to raise our flag upon a hostile ship captured in battle. He was the first to receive a salute from a foreign power. He was the first commander in history who ever landed an American force upon the European shore.

Every officer of the Navy should know by heart the deeds of his undaunted commander. Every officer of the Navy should feel in every fibre of his being the desire to emulate the indomitable determination of John Paul Jones who strengthened the soul of our people in their great struggle for nationality.

John Paul Jones resided in Paris at the time of his death. His remains was brought to this country in 1905, and later buried in a crypt of the U.S. Naval Academy chapel, Annapolis, Md., in 1913.

But his true sepulcher will ever rest in the hearts of the American people. The people are his memorial. He is our hero. He will live on in immortal youth. He will live for all time in our history.

Indecision on Atomic Powered Airplane

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 27, 1959

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following editorial entitled "Atomic Plane Indecision," which appeared in the Atlanta Journal on July 26, 1959:

ATOMIC PLANE INDECISION

Many Americans will be inclined to side with Representative MELVIN PRICE that there

has been too much indecision and delay in the administration's approach to problems involved in construction of an atomic-powered airplane.

A joint congressional subcommittee headed by Representative PRICE has held 36 hearings on the subject in the past 13 years—and still there is no go-ahead signal from the Government.

Gen. Thomas D. White, Air Force Chief of Staff, and Maj. Gen. Donald J. Keirn, Air Force Chief for Nuclear Propulsion, are in favor of going ahead with construction of the plane. There are reports of the Russians going all-out in completion of such a project.

The need is for a firm decision one way or another. Considerably more vigor was given to plans for the development of nuclear submarines; otherwise this country today would have no atomic-powered underwater craft.

The Government has wasted enough time on the atomic plane project. The situation calls for an explanation.

International Association of Firefighters Opposed to Extending OASI Program to Firefighters

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter which I have received from Mr. John C. Kabachus, secretary-treasurer of the International Association of Firefighters:

INTERNATIONAL ASSOCIATION
OF FIREFIGHTERS,
Washington, D.C., July 29, 1959.

Hon. THOMAS J. LANE,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN LANE: H.R. 213 originally provided for additional time in which certain State agreements under section 218 of the Social Security Act may be modified to secure coverage for nonprofessional school district employees. It was acted upon by the House and subsequently appeared on the Senate Calendar.

The Senate, in its deliberations, has further amended this act seeking to extend social security coverage for police and fire in the States of Vermont, North Dakota, California, and Kansas, and to provide coverage for a small unit of police officers in the State of Oklahoma who have erroneously been making contributions into the system.

These amendments in the Senate deprived our organization of an opportunity of formal hearings with respect to the position of the firefighters. May we take this opportunity to state the position of the firefighters.

Our international organization, since the very inception of the Federal act dating back to 1937 consistently at its biennial conventions where delegates representing 95,000 firefighters affiliated with our international organization have constantly taken the stand that, as an international union, we would oppose extending the OASI program to the firefighters.

The objections raised by the firefighters toward the Federal Social Security Act are that it is primarily and basically designed as a social measure and was never intended to serve as a retirement plan. In contrast, we find State and local retirement plans designed to meet the needs of superannuated employees where benefits are based on the amount of contributions and geared to the amount of salary and length of service. A retirement plan is viewed as an arrangement between one employer and his employee.

In the case of the social security program, there is little individual equity; the contributions are not earmarked to buy protection for specific employees on whose wages they are based. I am sure you will agree that the principles of a retirement plan are exactly the contrary.

We, as firemen, enjoy a very privileged position in our communities where retirement systems exist. It is universally known that, through the generosity of our States and city fathers, early retirement opportunities are provided for any of our firefighters, substantial disability benefits as well as provisions for adequate ordinary disability retirement allowances, benefit payments to our widows and orphans do not fall into the category of being subsistence allowances and most areas provide for an adequate income as the result of the loss of the breadwinner. Under the provisions of many of the retirement organizations that are presently in existence, firefighters also enjoy the benefit of special consideration being given for the hazardous nature of the firefighter job in his community by providing for additional creditable service in computing his actual retirement allowance.

In the event the existing retirement programs in our communities covering the firefighter indicate a deficiency in the benefits in the survivor's awards for employees who at an early age expire under conditions that cannot be attributed to the fire service, it is our feeling that the local retirement plan can effectively be amended providing for the coverage at less cost of the local taxpayer than by the extension of a Federal social security program.

Hoping that this information will indicate our position in opposition to the OASI program being extended in the direction of covering the firefighters, I am,

Respectfully,

JOHN C. KABACHUS,
Secretary-Treasurer.

Job Development Legislation Urgently Needed

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks by Hon. David L. Lawrence, Governor of Pennsylvania, before the Pennsylvania congressional delegation, Washington, D.C., Wednesday, July 29, 1959:

As far as Pennsylvania is concerned, Senate bill 722, the job development legislation, is the most important piece of legislation before the Congress.

Our State suffered severely during the recent recession. It continues to suffer. During May, the last month for which complete figures are available, unemployment stood at 364,000. That is 10.7 percent of all the unemployed in the United States; we have only 6.35 percent of the Nation's population.

The reasons for this chronic condition are well known to all of us. They bear on the shift of textiles to the South; the depletion of our forests; the mechanization of our coal mines and coal's competition from other fuels; the automation process in many industries; notably steel; and the dieselization of our railroads.

Needless to say, whether your particular district is rated as chronic, or just falls into a temporary labor surplus area, there is a direct overall impact to your constituents. People of the more prosperous areas are carrying a disproportionate share of Pennsylvania's obligations—for roads, for schools, for public assistance and for general government. On this basis, one area of the state cannot fully prosper while another area is economically distressed.

As you know, the Senate completed action on March 23, 1959. The House Banking and Currency Committee completed action on May 14. Since then S. 722 has languished in the Rules Committee.

It is most urgent to Pennsylvania that S. 722 be acted upon promptly and favorably.

I have heard the argument that S. 722 is an antiunemployment bill; that it is not needed now that the recession is largely over. This is based on two misconceptions: (1) That chronic long-term unemployment in economically distressed areas ends when national recessions end; and (2) that S. 722 is an antirecession bill. Both are incorrect.

Chronic area unemployment in our State and the Nation persists even in the midst of national prosperity. The first attached chart [not printed in RECORD] illustrates this point.

As you can see, even in the boom years of 1952, 1956, and 1959 when national unemployment got down as low as 2.8 percent, 3.4 percent, and 4.9 percent, respectively, unemployment in our chronic surplus areas in Pennsylvania remained at 7.8 percent, 8.9 percent, and 12.6 percent.

The second chart [not printed in RECORD] shows the location of these chronic surplus areas in the State, all of which would qualify for help under the area redevelopment bill, according to the committee report.

The third chart [not printed in RECORD] shows the severity of unemployment, as of May and January, in each area currently classified as substantial labor surplus.

The fourth chart [not printed in RECORD] shows the location of these areas of substantial labor surpluses.

As you can see, unemployment even today remains as high as 18.2 percent in the Uniontown-Connellsville area, due to shutting down of mines and many other industries.

The Uniontown-Connellsville figure is a dramatic demonstration of Pennsylvania's need for this legislation. Only seven other towns in the Nation exceed the 18.2 percent rate—six of these are small towns in West Virginia and Kentucky coal fields; the seventh is a small Maine town where the textile factory moved out.

Most dramatic of all is the Scranton, Wilkes-Barre, Hazleton complex. With a 14.1 percent unemployment figure, it has the highest unemployment rate of the 149 metropolitan areas in the United States.

Unemployment stands at 7.6 percent in Pittsburgh and 6.4 percent in Philadelphia. These statistics, remember are for May, and do not reflect the steel strike.

It is quite clear that long-term unemployment is a boom time phenomenon in some areas of the State, and not just a byproduct of national recessions.

Our State and our communities have done a magnificent job through local industrial authorities. But the Federal Government has failed to assume its share of the responsibility in chronic area unemployment in the United States for far too long. It is our hope that this will end with the implementation of S. 722.

Pennsylvania is the classic illustration of this problem, gentlemen. We ought to have unanimity, or close to it, from our own dele-

gation. If we don't, then other Congressmen, with no distressed area problems of their own, might very well question, and doubt, the severity of the problem as we know it.

Statement by Murray A. Sadler, Chairman, South Carolina Highway Users Conference

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. DORN of South Carolina. Mr. Speaker, the Honorable Murray Sadler, representing the South Carolina Highway Users Conference, was well received by the Ways and Means Committee. He made an excellent statement, worthy of the attention of the Congress and the country. His testimony follows:

My name is Murray Sadler. I am from Donalds, S.C., and am here as chairman of the South Carolina Highway Users Conference. In appearing before this committee today, I am representing the following highway user groups: Association General Contractors; Atlantic Greyhound Corp.; Carolina Motor Club; Carolina Ready-Mixed Concrete Association; Columbia Outdoor Advertising, Inc.; Esso Standard Oil Co., Truck Division; Motor Transportation Association of South Carolina; Palmetto State Oil Marketers' Association; Portland Cement Association; South Carolina Association County Road Officials; South Carolina Automobile Dealers Association; South Carolina Bakers Council; South Carolina Dairy Association; South Carolina Farm Bureau; South Carolina Oil Jobbers Association; South Carolina Rural Letter Carriers; South Carolina State Chamber of Commerce; South Carolina State Grange; South Carolina State Motor Club; Textile Manufacturers Association.

Every one of these South Carolina organizations is unalterably opposed to any further increases, in any amount and for any purpose whatever, in the Federal gasoline tax or other Federal taxes levied on highway users.

Just 3 years ago, in 1956, the Congress raised the Federal gasoline tax to 3 cents a gallon and authorized the start of this great new Federal highway program. That increase was justified to the motoring public on the premise that it would help finance the program on a pay-as-you-go basis, without any need for further taxation.

To insure the integrity of the plan, the highway trust fund was established and certain Federal automotive taxes, including the new 3-cent-a-gallon tax, were earmarked to go into the fund.

That was yesterday. Today, the highway program is no longer on a pay-as-you-go basis, and motorists are threatened with another gasoline tax increase, whose justification this time is that not enough money is available to pay for the program.

I am sure that others today have pointed out, or will point out, the heavy highway tax burden already borne by motorists all across the country. In South Carolina, our motorists are now paying over $150 per year per vehicle in special automotive taxes. More to the point, the Federal gasoline and other automotive taxes alone are now taking more than $40 million a year out of our State.

Our motorists have never objected to paying their own way and have always been willing to bear a special highway tax load for the roads they need and use. No highway-minded person or organization could feel otherwise, but how much can they take?

Forty million dollars a year is a staggering special Federal tax load for vehicle operators.

Moreover, they are not getting a square deal on the money they already pay. We have not yet heard it denied that current Federal revenue from these taxes far exceeds the cost of the road program.

The South Carolina Highway Users Conference and its member organizations strongly urge that all of this automotive tax money be dedicated, as it should rightly be, to roads.

We are of the unequivocal opinion that our motorists not only pay more than enough for the roads necessary to their well-being, but that any added taxes on motor fuels would be utterly unjustified.

I would like also to make one final point. We are totally unimpressed by suggestions that this tax might be increased on a temporary basis.

Twenty-seven years of experience with the Federal gasoline tax have demonstrated to us that there is nothing temporary about it.

In our view, no case whatsoever has been made for any type of gasoline tax increase.

John Harris, Houston Chronicle

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include what I believe to be a thought-provoking article written by one of the newest and youngest members of the Texas press corps here in Washington.

The article dealing with the present steel strike was written by John Harris, Washington correspondent for the Houston Chronicle:

[From the Houston Chronicle, July 26, 1959]

STRIKEBOUND STEEL PLANTS FACE RUIN

(By John Harris)

WASHINGTON.—Many shutdown steel plants may never reopen, Commerce Department officials warned Saturday.

This is because the steel strike, if prolonged, will hand to foreign producers a part of the domestic steel market on a platter—permanently.

"If the strike stretches on, American buyers will wind up trying to get foreign-made steel at any price," a spokesman warned.

"Buying habits and contacts will be established, causing permanent penetration of the home industry," he said.

IMPORTS WIRE

The United States imports huge quantities of barbed wire, wire fencing, rods, and reinforcing bars. But foreign mills have long sought to increase these, and to establish in the U.S. market for other products.

Many feel the strike will provide their big chance.

An estimated 21 million tons of steel is now in inventory in the United States. This is roughly a 90-day supply. But some lines may run out faster than this, it was predicted, causing a demand for foreign replacement.

BIGGEST CENTER

Last year the Houston-Galveston area was the Nation's biggest center for importation of foreign steel products. About 334,000 tons of imported steel poured into the area.

Oddly, an initial result of the strike will tend to reduce foreign steel imports, however. But this will disappear if the strike continues beyond a few weeks.

The reduction is being caused by two factors:

1. Huge amounts of foreign steel have been stockpiled in anticipation of the strike.

2. A resurgence of European economy is providing a ready market for steel that would otherwise only find a buyer in the United States.

DELIVERY LONGER

Commerce Department experts said this is why delivery time for steel destined for the United States is now lengthened, and why the price of foreign steel is already edging up. (Some foreign steel products are higher priced than their U.S. counterpart, as in the case of galvanized sheet.)

Concrete reinforcing bars, formerly $70 per metric ton f.o.b. Antwerp, Belgium, are now $100, and still rising.

Western European and Japanese steel plants, many built with foreign aid dollars, are getting into high gear from a period of recession. Japanese steelmen, whose production dropped 54 percent last year, are known to be encouraged by the steel strike here.

SMALL NATIONS

Biggest exporters to the United States are the postage-stamp size countries of Belgium and Luxembourg. Together they account for about half of steel imports.

Japan is next, followed by West Germany, France, and Britain.

Sources of steel in Belgium and Luxembourg are a giant complex of firms tied closely in a cartel. They set their own minimum prices for steel they export; there is no competition.

CARTEL CENTER

Headquarters of the cartel is in Brussels; cartels are legal in most European countries. Some of their plants are the most modern in the world, for many were destroyed in World War II, and were rebuilt in the latest style.

Ownership is mostly private. In Britain 10 percent of steel industry is owned by the Government.

But combined, steel exports to the United States comprised less than 3 percent of the steel in the United States during 1958.

However, in certain products, their contribution is significant.

PERCENTAGE

More than 50 percent of our barbed wire is imported. We import 20 percent of our wire fencing, 32 percent of wire nails, 19 percent of concrete reinforcing bars, and 17 percent of our wire rods.

Foreign producers are hoping to step these percentages up considerably.

Belgium and Luxembourg have to export almost all their steel products; their domestic economy is too small to absorb them. West Germany, Japan, France, and Britain are traditionally nations of heavy steel industries.

In 1957 the United States imported 1,500,000 tons of steel. In 1958 this rose to 1,700,000, and in the first 5 months of 1959, 1,500,000 tons were imported, mainly in anticipation of the strike. Of this, 171,000 tons come into the Houston-Galveston area.

Basic Difference: We Trust the People, Communist Rulers Do Not

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of July 25, 1959, commenting on the magnificient speech on American life and attitudes given by Vice President NIXON in Moscow at the opening of the American Exposition there:

WE TRUST THE PEOPLE

Friday, July 24, 1959, will go down in history for one of the most curious episodes in the annals of diplomacy. On that day, in Moscow, before an aghast audience of newspapermen, photographers and officials, the Premier of the Soviet Union grew so vehement in his arguments with the Vice President of the United States that he waggled a minatory finger under Mr. NIXON's nose. And in the exchange of warm words, the Vice President gave as good as he received.

Dramatic as this incident of the opening of the American Exposition might be, however, the true importance of the day lies in other directions. For it is doubtful whether the effervescent Mr. Khrushchev, who is fond of trading blunt, off-the-cuff remarks and finds few foemen worthy of his steel among the sycophants and satellites who surround him, attached much importance to the matter. He may even have found it refreshing.

What was serious was Mr. NIXON's formal speech, a very clear and candid explanation of what the physical objects on display at the exposition stood for in terms of American life. It was an excellent speech, one to make Americans proud both of what inspired it and the man who gave it. There was neither brag nor bluster, but a plain and factual statement of what freedom, a long course of industrial development and the drive of a people still young in history had been able to do to refute the classic criticisms of capitalism, made a century ago. And perhaps the heart of it lay in Mr. NIXON's assertion: "We trust the people."

The force of this statement received a blunt and unexpected tribute from the Soviet Government. Before the Vice President spoke, Soviet officials started culling out American books from the exposition. And news stories telling of this intrusion of censorship were themselves censored. And after Mr. NIXON's speech, the Soviet radio put it on the air—without translation.

Whatever may be done in explanation of these acts, or to change the impression they created, it is patent that the Soviet Union does not trust the people. The speech of Norman Cousins is another case in point. Premier Khrushchev might throw an arm in friendly wise about a worker's shoulders, but his government puts its paternal hands over that worker's eyes and ears.

Mr. Khrushchev's cavalier treatment of his distinguished guest is an interesting example of his concept of diplomatic manners. But far more fundamental is the Soviet treatment of Mr. NIXON's speech, of American books and the American press. Of all the gulfs that policy has opened between East and West, of all the dangers that Soviet expansionism has created, this basic difference between the two societies is the most serious. The Russian people and the American people both want peace, both would like to be friends and to engage in the fruitful exchange of ideas and goods. But in America we trust the people. In the Soviet Union, their rulers do not.

Jersey Drum Corps Are Nation's Best

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. GALLAGHER. Mr. Speaker, under leave to extend my remarks, I would like to call to the attention of my colleagues an excellent article from the Jersey Journal of July 27, entitled "Jersey Drum Corps Are Nation's Best."

I am especially proud because the drum corps which are the Nation's best, emanate from my district. They are St. Vincent's in Bayonne and St. Patrick's in Jersey City.

Anyone who witnesses a performance of these drum corps is in for a most entertaining experience.

A special tribute is due to the organizers and moderators of the respective corps: Rev. Edward F. Wojtycha of St. Vincent's and Rev. David Gaffney of St. Patrick's. Also, my commendations to the fine boys and girls who do such an able job of performing. They work very hard and have a rigorous training schedule year round.

Perhaps if any of my colleagues are interested in viewing a performance on August 30 in Roosevelt Stadium in Jersey City, St. Vincent's will perform their annual dream contest. St. Patrick's has already held their preview of champions show on May 31 of this year.

The article follows:

HAPPY, BUSY YOUNGSTERS—JERSEY DRUM CORPS ARE NATION'S BEST

Let blare the bugle; let roll the drum: here come the champion musical-marching corps of New Jersey.

Rigorous training is a year 'round must for drum and bugle cadets, and this is the season it pays off in colorful competitive displays. Here in Hudson County are two topnotch units, St. Vincent's in Bayonne and St. Patrick's in Jersey City.

The junior corps perform with about 50 members under the age of 21, and have all-girl color guards. At the heads of the bands are drum major, John Salvato, and color guard captain Patricia Walsh of St. Vincent's, and their St. Patrick's counterparts, Simon Coscia and Patricia Reid, all 18.

The experienced Vinnies have marched to the tune of 11 national junior championships since 1946, reports the Reverend Edward F. Wojtycha, organizer and moderator.

The Jersey City corps is "still in the growing stage," says the Reverend David Gaffney of St. Patrick's, "but we're moving up quite fast." His evidence is the fourth place (out of 15) copped by the cadets in their third try at the State title.

The Bayonne group wears green and white uniforms, trimmed with gold, and black leather riding boots. The Patties sport black and white outfits and cowboy hats.

Military maneuvers are skilled to precision by popular songs and solid marches. Father Wojtycha said the crowd pleasers range from Sousa to Lerner-Lowe.

Father Gaffney regrets that his audiences are sometimes disappointed. "But there's just not enough Irish music adaptable to a marching drum corps," he says.

Expenses are high, report the clergymen. Outfits cost $2,000, new drums $850, and an August trip to Minneapolis for the nationals between $3,000–$3,500.

Much of the high cost of marching is met with funds raised at the competitive rallies held from May to October. St. Vincent's will sponsor the annual dream contest at Roosevelt Stadium, Jersey City, August 30, and expects up to 25,000 fans. St. Patrick's played host to 13,000 at the stadium at their preview of champions, May 31.

Other county-sponsored annuals are the Union City Independence Day celebration with a crowd of 14,000 and the Bayonne PAL and Union City PBA affairs in the fall.

Charles R. Naber of Union City, chief judge of the Eastern States Association of Contest Judges, explained the scoring of maneuvers, which are penalized if lasting more or less than the prescribed 8 minutes.

Two judges rate each performance on a 100-point system. This is the breakdown: marching and maneuvering (30), bugling (25), drumming (25), and general effect (20).

Other Jersey groups with national reputations are the Caballeros of Hawthorne, a senior corps that won first place in the 1958 American Legion nationals; the Golden Knights of Blessed Sacrament, Newark, that received top trophies in last year's Legion and Veterans of Foreign Wars nationals; and the Holy Name Cadets of Garfield, who placed second in 1958 junior nationals.

Naber, a 25-year judging expert, says corps training is an outstanding deterrent to juvenile delinquency, because members are just too busy. His colleagues have an old saying: "The kid who blows a bugle will never blow a safe."

Judge James R. Nolen

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 29, 1959

Mr. PHILBIN. I was inexpressibly shocked to learn of the sudden passing of my friend, the distinguished judge of the Ware, Mass., district court, Hon. James R. Nolen.

Judge Nolen was in the prime of his very brilliant career. For years he had been a successful, outstanding, practicing lawyer in the State of Massachusetts, New York, Washington, and Europe. Indeed, his practice carried him to many countries and he was known as an expert on international law as well as domestic law.

His services on the bench were of the very highest order. He was recognized for his great ability, fairness and impartiality, and had frequently been called by the chief justice for a considerable period of time to serve at sessions of the great Superior Court of Massachusetts where he won new acclaim for his capacity, legal knowledge, and talents as a brilliant and fairminded lawyer and judge.

Judge Nolen was former distinguished chairman of the Port of Boston Authority, and in that important work he

rendered most valuable services to the port of Boston. He was chairman of the Ware Selective Service Board which served five Massachusetts communities during World War II. Judge Nolen served as adviser to the Foreign Economics Administration in Washington during that war and was also a sage adviser at the World Monetary Conference in 1945.

Very highly trained and educated, he was a graduate of Holy Cross College, Boston University Law School, and held an honorary degree of doctor of laws from Mount Mary College in Milwaukee.

In his early years, he had studied at the U.S. Military Academy at West Point for 2 years until he decided to take up law.

Judge Nolen was possessed of an amiable, magnetic personality and was respected and loved by all who knew him. He was a man of action and a man who loved to move in many circles.

He was a member of the Knights of Columbus, the Erie Society, the Charitable Irish Society, the Ancient Order of Hibernians, the Red Men, the American Turn-Verein, and the Algonquin Club of Boston.

I had known Judge Nolen for many years and entertained highest regard and affection for him. Prior to his elevation as presiding judge of the Ware court, he came to Washington quite frequently on business and I often met him and always enjoyed his visits.

He had a sharp, legal mind, was a man of a broad variety of interests, a careful student of government, and a learned judge. A man of rugged character, great ability, strong purpose and undeviating loyalty, he won the respect, esteem, and affection of all those who knew him and was admired and respected by the community to which he made so many valuable contributions.

He was taken by his Maker right at the height of his career, at a time when those of us who knew him all believed that he had many more years of promise, progress, and advancement in his chosen profession.

He leaves behind him a very large number of people who mourn his loss and a loving family to whom he was so deeply devoted. To his beloved wife, Mrs. Nolen, and his distinguished sons, State Representative James R. Nolen of Ware and Dr. William Nolen of New York City; his two daughters, Mrs. Mary McGrath of New Britain, Conn., and Miss Judith Nolen of New York City; his distinguished brother, Judge William R. Nolen, of Holyoke; and the rest of his family I tender my deepest sympathy.

I hope and pray that the good Lord will bestow upon them in their profound sorrow and grief that measure of consolation and reconciliation that comes from their spiritual faith. I extend them all my most sincere condolences with the devout prayer that they may accept their sorrowful bereavement with true Christian fortitude. May Judge Nolen find peace and rest in his heavenly home.

Resolutions Adopted at Convention of North Dakota Stockmen's Association

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Thursday, July 30, 1959

Mr. YOUNG of North Dakota. Mr. President, the North Dakota Stockmen's Association held their annual convention in Bismarck, N.Dak., early in June. I have just received a copy of their resolutions, which I ask unanimous consent to have printed in the Appendix of the RECORD as a part of my remarks. I think that Members of the Senate will find the views of the North Dakota Stockmen's Association most helpful to them.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTIONS ADOPTED AT THE 30TH ANNUAL CONVENTION OF THE NORTH DAKOTA STOCKMEN'S ASSOCIATION HELD AT BISMARCK, N. DAK., JUNE 8, 9, 10, 1959

RESOLUTION NO. 1

Livestock research

Whereas the potential for livestock production in North Dakota is vastly underdeveloped; and

Whereas it is a recognized fact that our industry spends pennies for research where other industries spend dollars; and

Whereas the future economy of North Dakota is directly dependent on continued advancements in the livestock industry: Now, therefore, be it

Resolved, That we are in favor of a vastly augmented livestock research program including nutrition and veterinary research at the North Dakota Experiment Station.

RESOLUTION NO. 2

Light or suspended sentences

Resolved—

1. It is of primary importance to the people of this State that the laws enacted for the protection of the stock grower should be enforced where guilt is clear whether by admission or by conviction. The only legal deterrent to theft is in the hands of the courts and this must be effective and not result in such light or lacking punishment as to make the laws ineffective.

2. Whereas the suspended sentence is often used by the District Court of North Dakota with convicted cattle thieves; and

3. Whereas a suspended sentence has little or no effectiveness unless the person whose sentence has been suspended has adequate supervision;

4. Now, therefore, be it

Resolved, That in order to bring about better understanding and cooperation, the North Dakota Stockmen's Association requests that the district courts, county authorities, the North Dakota Parole Board and all State officers work together toward the end that every suspended sentence involving punishment for livestock theft be carefully supervised and revoked upon violation.

5. And that we recommend imposing heavier sentences for stealing or illegal killing of cattle or other livestock.

RESOUTION NO. 3

Beef promotion

Be it resolved, That the North Dakota Stockmen's Association urge the American National Cattleman's Association and its officers to fully cooperate with the National Beef Council in its current educational, promotional and research program; and be it further

Resolved, That the National Beef Council be recognized by the American National Cattleman's Association as the proper collecting and disbursing agency of all beef promotional funds collected for national beef promotion and education.

RESOLUTION NO. 4

Beef promotion funds

Whereas we reaffirm our position that the beef producers are directly concerned with the promotion of beef to bring about an increased consumer demand for beef through an augmented an enlarged producer program of education, research, merchandising and promotion, and

Whereas the primary obstacle to financing an effective beef promotion program is the restricting provisions of the Packers and Stockyards Act with respect to voluntary deductions from proceeds of sale of livestock at public markets: Therefore be it

Resolved, That we support proposed legislation amending the Packers and Stockyards Act whereby any marketing agency may, upon request of a responsible State livestock producer organization, make voluntary deductions not exceeding 10 cents per head on cattle, payable to the aforesaid livestock producer organization.

RESOLUTION NO. 5

Coordination of beef promotion

Whereas various organizations throughout the State have been very active in beef promotion and in the promotion of cattle feed: Now, therefore, be it

Resolved, To continue coordination of all groups now actively interested in beef promotion.

RESOLUTION NO. 6

Bangs vaccination for recertification brucellosis program

Whereas official vaccination has proven to be a practical and effective means for the control of brucellosis: Therefore, be it

Resolved, That we urge that official vaccination of bovine beef type females properly identified shall be acceptable as an alternate method for recertification of modified accredited areas in the Federal-State cooperative brucellosis eradication program; and be it further

Resolved, That we urge that bovine beef type females which have been officially brucellosis vaccinated and are properly identified, regardless of age may be moved or transported interstate.

RESOLUTION NO. 7

Experiment station and extension service budget

Whereas the North Dakota Experiment Station and Extension Service are direct contributors to the welfare of the operating farmers and ranchers in the State of North Dakota; and

Whereas the increased need for further research in livestock is a recognized fact; and

Whereas the ranchers and farmers of North Dakota firmly believe that the budgets for these two services are not compatible with the schools of higher education; and

Whereas the present budget for agricultural research in livestock production is not in keeping with the technological advances in present day agriculture: Now, therefore, be it

Resolved, That the North Dakota Stockmen's Association promote and request of the legislature that proceedings be initiated to the effect that the future appropriations of the experiment station and extension

service be completely separated from the college budgets of North Dakota.

RESOLUTION NO. 8

Feed lot branding

We recommend that the brand department of the North Dakota Stockmen's Association investigate and recommend a uniform charge per head for feed lot branding—this to be performed at point of purchase where facilities are available.

We recommend that the department clarify procedure for feed lot branding on cattle purchased. We suggest this information be publicized through all media available to the brand department.

RESOLUTION NO. 9

County livestock groups

We recognize the value of county livestock groups to the livestock industry. The North Dakota Stockmen's Association desires to cooperate with these groups to the fullest extent. We invite them to call on the Stockmen's Association for any help we can give in the way of speakers, program materials, or any other assistance they may desire.

RESOLUTION NO. 10

North Dakota Water Users' Association

Whereas North Dakota is a State that is the drainage area providing runoff water that is now impounded in dams and reservoirs in the State and outside of the State, and more dams and reservoirs will be made in the future storing water originating in North Dakota; and

Whereas each year more demands are made on this water by States in the lower reaches of these streams draining North Dakota water; and

Whereas the future of North Dakota's agricultural and industrial growth will depend progressively heavier on the available supply of water, and

Whereas the North Dakota Water Users' Association is endeavoring to promote use of this water in North Dakota and the safeguarding of the legal rights to these waters for North Dakota use: Therefore, be it

Resolved, That the North Dakota Stockmen's Association commend the North Dakota Water Users' Association on their most needed endeavors to preserve the rights to North Dakota water for North Dakota users and encourage the activities of this organization.

RESOLUTION NO. 11

Wilderness legislation

Whereas legislation has been proposed in the Congress that would authorize the creation of a wilderness system which contains no definite limitation of the federally owned lands which may be removed from multiple use and thus set aside for the enjoyment of a fortunate few; and

Whereas this legislation provides no recognition of natural resources within their borders for commercial and general recreational purposes: Now, therefore, be it

Resolved, That the provision and protection of needed wilderness areas be left to the agencies administering the lands and to the citizens of the States where such areas are practical.

RESOLUTION NO. 12

Waterfowl refuges

Whereas the U.S. Government, especially through its agency, the Fish and Wildlife Service of the Department of the Interior, is sadly failing in the administration of the professed multiuse policy as concerns grazing of livestock on game refuges, resulting in gross inefficiency of the use of said land, and

Whereas the Fish and Wildlife Service is constantly acquiring and attempting to acquire more private lands for refuge purposes, we, the North Dakota Stockmen's Association, strongly oppose the further acquisition of any land within North Dakota for refuge purposes as it affects private livestock operations, and strongly urge that the multiuse policy be continued as originally intended.

RESOLUTION NO. 13

Economy in Government

Whereas the Hoover Commission report has pointed out various ways of economizing in Government spending that would save taxpayers billions of dollars without impairing Government effectiveness; and

Whereas Congress has been loath to adopt these economy measures, which in no way would interfere with necessary spending for defense: Therefore be it

Resolved, That we again urge Congress to enact measures as suggested in the Hoover Commission report.

RESOLUTION NO. 14

Third brakeman

Whereas the progress of North Dakota and this association is in part tied to transportation; and

Whereas this association is vitally interested in sound and economic transportation; and

Whereas North Dakota railroads are hampered in their operation by an outmoded 1919 law which requires railroads to use a surplus third brakeman on freight trains of more than 40 cars on their main lines: Now, therefore, be it

Resolved, That this association commend the 1959 legislative assembly for their action in passage of senate bill 94, which amended an obsolete law, and we express the belief that the people will sustain and affirm this legislative action.

RESOLUTION NO. 15

Thank you

To the city of Bismarck, it various organizations, business establishments, and the many individuals who have contributed so generously of both time and effort in making this convention a success, we wish to express our thanks. The job was well done and we have had a wonderful convention.

Also, to Gov. John Davis, we express our appreciation for his generous invitation to use the State Capitol for our first day's meetings.

RESOLUTION NO. 16

Sympathy

We wish to express our sincere sorrow at this time for the loss of advice, counsel, and fellowship of those members who have passed on during the year. We extend our deepest sympathy to their families.

Veto of Wheat Bill Should Result in Stabilizing Prices and Income

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 30, 1959

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Oakland (Calif.) Tribune. This editorial sheds light on the recently vetoed wheat bill, and attests to the political motivation of the vote harvesting farm bloc. I hope it will be read by my colleagues, as well as by wheat farmers and the taxpaying, bread-buying public.

VETO OF WHEAT BILL SHOULD RESULT IN STABILIZING PRICES AND INCOME

President Eisenhower vetoed the wheat bill handed to him by a congressional majority that knew in advance it would be disapproved. Reaction from Democrats confirms what opponents of the bill have been saying all along—it was conceived for political gain and not from a sincere effort to make things profitable for the farmer.

The Democrats gleefully said they are convinced the veto handed them a farm issue which will help elect a Democrat to the Presidency next year. Four Senators with presidential aspirations were on record as favoring the bill the President vetoed. Senators LYNDON JOHNSON, STUART SYMINGTON, and HUBERT HUMPHREY voted for it. Senator JOHN KENNEDY who was absent paired his vote in support of the bill.

The Republican Party leadership will be lacking in astuteness if it does not immediately begin making it plain to the people that indeed an issue has arisen, but not in the light the Democrats see it. It is time the farmers are given convincing evidence that they have been used too long as tools for political profit. The wheat bill that Mr. Eisenhower vetoed is one of the best examples.

Any farmer worthy of the name should realize that there is no basis to the Democratic claims that the rejected measure would have reduced wheat production and cut the cost of farm programs in general to benefit the taxpayer.

The history of past programs calling for reduced acreage, as this one did, reveals that in no instance has production been reduced as a result. Improved methods of cultivation, better fertilizers and more mechanization have increased the yield in percentages that have outstripped acreage reductions. To anyone who challenges that, the statistics on wheat in storage, the increasing costs of the program, and the payments to the farmers provide enough answer.

The American Farm Bureau Federation, the greatest of the farmers' organizations, which has consistently been opposed to the gradual strangling of the farmer's independence through regimentation, but which has been just as consistently ignored by the farm State politicians, in its latest attack on Government controls, has this to say:

"Farmers have been hurt by accumulated surpluses, overproduction, and inefficient marketing practices that have resulted from these laws. Government stockpiles of surplus farm products represent an investment of close to $10 billion. The surplus is still growing despite everything that is being done to reduce it through allotments, quotas, soil bank programs, cut-rate sales, and outright gifts. The end is not yet in sight."

Those are facts which cannot be disputed but which somehow manage to be ignored. They are facts in spite of the 30 years that Congress has been running the farmer's business for him without achieving that which every farmer would like to see, greater stability in prices and incomes.

Union Oil's "Poppycock" Advertisement

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1959

Mr. PORTER. Mr. Speaker, the practice of certain big corporations to buy space in national magazines and news-

papers to beat their ideological drums is all right as free speech. However, when they use their expensive soapbox to spread misleading and erroneous poppycock, then they should be answered—if not in a full-page advertisement, then elsewhere.

Below are the text of such an advertisement and a copy of my answer, along with the press release we issued to help the answer catch up, to some extent anyfay, with the advertisement which appeared very widely.

The only other consideration, Mr. Speaker, is whether such an advertisement is properly deductible as a legitimate business expense. That is a question I have addressed to the Internal Revenue Service.

Under unanimous consent previously granted I am including hereafter my press release, the text of the Union Oil Co. advertisement from the July 13, 1959, Life magazine, and my letter to the company's board chairman, Reese H. Taylor:

A national advertisement of a major oil company alleging that wage hikes and taxes threaten the jobs of its employees has drawn a requested response from Representative CHARLES O. PORTER, Democrat, Oregon.

In an open letter to the board chairman of the Union Oil Co. of California Thursday PORTER termed the advertisement misleading in many respects and "unfair poppycock." The Oregon Congressman cited facts and figures to disprove the assertions Chairman Reese H. Taylor was credited with making in a full page appearing in Life magazine July 13, 1959.

PORTER, in turn, invited comments from Taylor. He told Taylor "Businessmen belong in politics but they need facts and intelligence in this area as well as in business. I know it (the advertisement) utterly fails to do credit to the great ability you must have demonstrated to qualify for your present very responsible position."

The ad suggested:

1. That our Nation is being flooded with foreign imports to the detriment of the American economy. PORTER pointed out that U.S. merchandise exports exceed merchandise imports by $3 billion or more (1958 figures).

2. That the United States is faced with wage hikes not based on increased productivity and that other countries do not have this handicap. PORTER said available information showed 1958 total manufacturing production up 32 percent over 1948 while the number of man-hours of work in manufacturing was 10.3 percent lower. "This indicates that output per man-hour was 47.2 percent over the figure in 1948," he said.

(During the period, according to the Joint Economic Committee report of February 9, 1959, payrolls went up 41.6 percent and real average hourly earnings were up 31.5 percent. PORTER wrote Chairman Taylor that hourly earnings in manufacturing in Canada, West Germany, Great Britain, and France increased a higher percentage rate than in the U.S.A. from 1952–58.)

3. That the United States, unlike other countries, faces growing taxes, PORTER said the reverse is true. He said Federal tax rates on corporate and individual incomes "have been remarkably stable since World War II." PORTER quoted the U.S. News & World Report of April 3, 1959, which said U.S. taxes are among the lowest of all major nations.

Congressman PORTER told the oil company executive he didn't like high taxes either. eH said he felt, though, there were things a lot worse, such as jeopardizing national security by cutting back essential defense expenditures, increasing the Federal deficit to spur inflation or cutting expenditures for schools, highways, and hospitals to the detriment of national future health and welfare.

[Text of full page advertisement in Life magazine, July 13, 1959]

HOW WAGE HIKES AND TAXES THREATEN YOUR JOB

(By Charlie Perkins)

"Walk into nearly any store with the idea of buying something.

"You'll see products from abroad right alongside our American-made ones. Nails, woolen and cotton fabrics, dinnerware, sewing machines, cameras, bicycles, cars, and watches are some of them. And practically in every case, the imports cost less.

"Foreign manufacturers compete sharply now with our own industries. And they do so without two handicaps every American business faces today.

"1. Wage hikes not based on increased productivity. These result in continually rising prices for U.S. consumers and ever-mounting production costs for our manufacturers.

"2. Growing taxes. Each year taxes take more of industry's dollars. This, too, is reflected in higher prices to the consumer.

"It makes you wonder. If we price ourselves out of world markets, what's next? If we don't stay competitive, isn't that the same as pricing you and me and all of us right out of our jobs?"

Charlie Perkins, manager of our purchasing department, points up some cogent facts.

In 5 years U.S. imports climbed 77 percent while our exports rose only 27 percent. In 1958 our exports were $1 billion below 1957.

Unearned wage increases and ever-mounting taxes could reduce us to second rate status among nations—with a real unemployment problem here at home.

Your comments invited. Write: Chairman of the Board, Union Oil Co., Union Oil Center, Los Angeles 17, Calif.

UNION OIL COMPANY OF CALIFORNIA,
Manufacturers of Royal Triton, the Amazing Purple Motor Oil.

JULY 30, 1959.

Mr. REESE H. TAYLOR,
Chairman, Union Oil Co. of California,
Los Angeles, Calif.

DEAR MR. TAYLOR: In the July 13 issue of Life, the Union Oil Co. of California, of which you are the distinguished chairman, inserted a full-page advertisement which appeared also in many other magazines and which included an invitation for comments to be directed to you. I am pleased to accept this invitation.

Your advertisement is entitled, "Charlie Perkins, how wage hikes and taxes threaten your job." Charlie Perkins, as you note in the advertisement, is the manager of the purchasing department of your company.

Your advertisement is in many respects misleading and unfair poppycock. It suggests: (1) That our Nation is being flooded with foreign imports to the detriment of the American economy; (2) that the United States is faced with wage hikes not based on increased productivity and that other countries do not have this handicap; and (3) that the United States, unlike other countries, "is faced with growing taxes."

Each of these contentions is spurious. Let's look at the record.

Certainly we find a lot of items manufactured in other countries in our stores. But let me ask you a few simple questions, Mr. Taylor. Don't you believe that a lot of our manufacturers are mighty eager to sell some of their output in other countries? Does it disturb you when American-made sewing machines, typewriters, and farm machinery are sold abroad? How do you think foreign countries are going to pay for these goods if they can't sell their wares in this country?

Did you forget, if you ever knew, Mr. Taylor, that in no year since 1936 have our imports been as great as our exports and in recent years the excess of exports over imports has been most substantial.

Your Mr. Perkins is correct in his statement that merchandise exports were lower in 1958 than in 1957; in fact they were lower by $3.1 billion. But, in spite of this fact, 1958 merchandise exports were still $3.4 billion more than merchandise imports. (In 1957 merchandise exports were $6 billion greater than merchandise imports.)

I am sure that you must recognize, Mr. Taylor, as well as I do that the available data on productivity for industry as a whole is not very satisfactory. This is an area on which much more accurate information is needed. What information there is, however, does not point to any general conclusion that wage increases have been outstripping the productivity of American labor.

For example, based on statistics released by the Joint Economic Committee on February 9 of this year, it can be seen that in 1958 total manufacturing production was 32 percent greater than in 1948, while the number of man-hours of work in manufacturing was actually 10.3 percent lower. This indicates that output per man-hour was 47.2 percent greater in 1958 than in 1948. At the same time payrolls were 41.6 percent greater, and real average hourly earnings were 31.5 percent higher. Thus, while hourly earnings have more than kept pace with increases in the cost of living, real hourly earnings have increased only about two-thirds as much as output per man-hour. The broad generalizations of your advertisement hardly seem justified.

In fact, Mr. Taylor, you as a leader of industry should be proud of the high wages which prevail in this country. In no other respect does the economic superiority of the United States over the standard prevailing in the rest of the world stand out more clearly than in the high wages paid here.

Where else does the average factory worker have the automobiles, the electric appliances, the comfortable homes, the leisure, and the luxuries that are commonpalce here?

Who, if I may ask, paid for most of the 24.6 million barrels of gasoline your company marketed last year?

Where would your company be if the average American worker had to content himself with wages prevailing in Britain, France or Germany?

Where do you think the $125,000 salary you earned in 1956 and again in 1957 (as reported in Business Week for May 24, 1958) came from, if not primarily from the markets created by the earnings of the American workingman?

Somehow you think wage hikes are a handicap that foreign manufacturers don't have to contend with. There must be millions of foreign manufacturers who just wish that this were true. Let's look at the facts. From 1952 to 1958 average hourly earnings in manufacturing in the United States increased 27.5 percent; in Canada they increased 28.2 percent; in West Germany 36.5 percent; in Great Britain 43.9 percent; and in France 52.5 percent.

You also appear to be under a similar misapprehension with regard to the American's tax burden. You speak of "growing taxes" in the United States as a second handicap to American business that foreign manufacturers do without.

The facts are practically the reverse.

The Federal tax rates on corporate and individual incomes have been remarkably

stable since the end of World War II. In fact corporate tax rates have been cut back since 1953 with the expiration of the excess profits tax. Canada is increasing its corporate and income taxes this year. In France, tax increases amounting to $626 million were approved at the end of 1958. The Dutch have recently raised taxes. Of the major industrial nations of Western Europe, only the British have had a significant tax cut, and that was from a tax level that had been retained from the high rates of World War II.

As a recent article in the U.S. News & World Report (April 13, 1959) points out, high as U.S. taxes are getting, they remain among the lowest of all major nations. Many have higher income taxes than the United States and most have higher sales taxes. A table in this article shows the total taxes, National, State, or provincial, and local as a percent of gross national product for 11 major countries in the world.

Only three, Canada, Belgium-Luxembourg, and Denmark rank lower than the United States, based on 1958 data (Canada's data is for 1957). Compared to the U.S. taxes of 25.2 percent of gross national product, West Germany has taxes of 32.5 percent of gross national product, Netherlands, 32.4 percent; Austria 31.3 percent; France, 31.1 percent; Norway, 29.2 percent; Great Britain, 29.2 percent; and Italy, 28 percent.

Certainly I don't like high taxes any more than you do. In fact, I suspect that comparing our two annual incomes, the burden of taxes weighs more heavily on me and my family than on you and yours. But there are a lot of things that to my mind would be far worse than the high taxes I am paying. It would be a lot worse to jeopardize the security of our country by cutting back on essential defense expenditures. It would be a lot worse to increase our deficit in a time of general prosperity and thereby add fuel to the danger of inflation. It would be a lot worse to forego the needed expenditures for schools, highways, and hospitals on which the future health and welfare of our Nation depend.

I don't know, Mr. Taylor, how much of your business depends on the defense activities of our Nation, but I suspect it is a considerable portion. You speak of the danger to Charlie Perkins' job from wage hikes and taxes. I say to you that Charlie Perkins' job, and much more than Charlie Perkins' job, is endangered if we as a nation put our primary emphasis on holding down taxes and wages. It is the initiative, the vigor, and the know-how of millions of Charlie Perkinses throughout this Nation that have made it possible for them to get and to justify the high wages which prevail in America today and of which we should all be proud. It is the willingness of the Charlie Perkinses to pay taxes and to support the Nation's needs in times of peace and of war that has made our Nation strong. Let none of us in our search for greater sales and higher profits for our companies forget these facts.

Businessmen belong in politics, but they need facts and intelligence in this area as well as in business. I doubt that such advertisements as the one under discussion deserve tax deduction as a business expense. I know it utterly fails to do credit to the great ability you must have demonstrated to qualify for your present very responsible position.

I, in turn, invite your comments.

Sincerely,

CHARLES O. PORTER,
Member of Congress.

Library of Congress Analysis of the Amendments of the House Committee on Education and Labor Bill to the Kennedy-Ervin Bill (S. 1555)

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 29, 1959

Mr. BRADEMAS. Mr. Speaker, Members of the House of Representatives will, I am sure, find helpful the following analysis of the amendments made by the House Committee on Education and Labor to the Kennedy-Ervin labor-management reform bill, S. 1555.

The amendments to which the anlysis refers are to be found in H.R. 8342, the bill reported by the committee and introduced by Mr. ELLIOTT, of Alabama.

The analysis follows:

HOUSE COMMITTEE ON EDUCATION AND LABOR AMENDMENTS TO KENNEDY-ERVIN BILL (S. 1555)

(By Sar A. Levitan, Specialist in Labor Economics and Industrial Development, July 22, 1959)

The House Committee on Education and Labor adopted 102 amendments to the Senate-approved bill. Only part of the proposed changes are of a substantive nature. These deal with penalties provided for violation of the bill, powers of the Secretary of Labor in connection with enforcement, reporting requirements by employers and small unions, and amendments to the Taft-Hartley Act, including provisions dealing with secondary boycotts in the construction industry, filing of non-Communist affidavits, NLRB jurisdiction, economic strikers, definition of "supervisors," and ban on hot cargo.

MEMBERS' RIGHTS (TITLE I)

Both the Senate and House Committee on Education and Labor versions of the bill guarantee members' rights vis-a-vis their unions. These rights include: Freedom of speech and assembly; protection against arbitrary dues, initiation fees and assessments; rights to sue a union or its officers for alleged violation of rights; and safeguards against improper disciplinary action. However, the Senate version makes violation of those rights punishable by 2 years' imprisonment and $10,000 fine (sec. 607). The House committee bill relies upon internal union remedies for 6 months. If remedy is not secured within the 6 months, the aggrieved member may bring a civil action suit in a district court to prevent and restrain the violation of the members' rights. No penalty is provided under the House bill for the violation of the rights guaranteed to members.

Freedom of speech and assembly (section 101(a)(2))

The Senate bill makes these rights subject to the union's "established and reasonable rules." The House committee bill eliminates this limitation.

Dues, initiation fees and assessments (section 101(a)(3))

The Senate bill provides that dues and initiation fees may be changed only by (1) a majority secret vote at a general meeting; (2) majority vote in a referendum; or (3) in case of a national union by a majority vote at a convention.

The House committee retains the above two methods as far as local unions are concerned. But in case of a labor organization other than a local union or a federation of unions, the following means for raising dues or initiation fees is provided:

(1) majority vote of delegates at a convention;

(2) majority vote in referendum;

(3) majority vote of the union's executive committee, if authorized by the constitution and bylaws. This method of raising dues remains in effect until the next convention of the union.

Safeguards against improper disciplinary action (section 101 (a) (5)

The Senate bill provides that a union member may not be suspended, fined or expelled unless the member has been served with specific written charges and given an opportunity to defend himself at a hearing. The House committee bill requires only a fair hearing on written charges in accordance with the union constitution.

REPORTING (TITLE II)

Verification of reports by members (sec. 201(c))

The Senate approved bill requires that to make available to members copies of reports which they file under the bill and to permit members to examine the records kept to verify the reports. The bill also directs the Secretary of Labor to prescribe forms and conditions under which unions would be required to disclose financial records to members. The House Committee on Education and Labor also requires union officials to make available to members reports required under Title II. This requirement is enforceable through court actions, which may also award the union member(s) attorney fees and other costs involved in filing action against the union.

Exemptions from reporting (sec. 201(d))

The Senate bill authorized the Secretary of Labor to exempt local unions with less than 200 members or gross receipts of less than $20,000 a year from filing annual financial reports. The House Committee version exempts such unions from filing reports, but authorizes the Secretary of Labor to withdraw the exemption after determining that the members of a union have been denied information about their local's finances.

Reports on transactions with employers (sec. 202(a))

The Senate approved bill requires that union employees whose compensation and allowances are in excess of $5,000 annually must report business and financial transitions with employees bargaining with the employers. The House bill makes the reports mandatory of all union officers regardless of their compensation.

Employer reports (sec. 203)

The Senate bill requires employers to report to the Secretary of Labor expenditures made in connection with persuading employees to organize or bargain collectively. The House version limits employer reports to expenditures involving interference or coercion in connection with union activities.

Publication of reports (sec. 204(a) Senate; 205(a) House bill)

The Senate bill authorizes the Secretary of Labor to publish any information and data submitted by unions or employers under title II. The Secretary is also authorized to publish reports and studies based upon the data. The House bill strikes out this authorization.

Recordkeeping (sec. 205 Senate; and 206 in House bill)

The Senate bill authorizes the Secretary of Labor to prescribe the information which unions and employers must keep in order to verify the financial reports filed under the provisions of the bill. The House version requires that the needed information be kept by those who filed the informatoin for 5 years. It does not grant the Secretary of Labor any authority in the matter.

Secretary of Labor powers to investigate violations (sec. 206(c))

Both versions of the bill require the Secretary to investigate violations of the bill. The Senate bill also authorizes the Secretary to report his findings to interested parties. The House Committee bill does not contain this authorization. It also denies the Secretary power to investigate alleged violations of members' rights under title I.

Loans by unions (sec. 207(a), Senate; 503(a) House)

The Senate bill limits union loans to members or officers to a total of $1,500; the House version raises the limit to $2,500.

Paying fines or litigation costs (sec. 207(b) Senate; 503(b) House)

The Senate bill prohibits unions or companies to pay in advance fines or litigation costs of a person indicated for the violation of any provisions of the bill, though upon acquittal the expenses incurred by the official in his defense may be reimbursed by the union. The House version prohibits the payments of fines of a convicted person but not the payment of defense costs.

Criminal provisions (sec. 208 (a) and (b), Senate; sec. 207 (a) and (b), House)

The Senate bill makes the violation of regulations issued by the Secretary of Labor with reference to title II or failure to comply with the provisions of the title punishable by 1-year imprisonment or a fine of $10,000, the same punishment as for willful violation of the provision of the title. The House version provides for punishment of willful violation only.

Commissioner of Labor Reports (sec. 210)

The Senate version establishes the position of Commissioner of Labor and authorized the Secretary to employ a staff to administer the provisions of the bill. The House committee bill makes no provision for these positions.

Non-Communist affidavits (sec. 212)

The Senate version requires union officers and employers filing petitions or complaints under NLRB to file non-Communist affidavits; the House committee bill repeals this requirement.

TRUSTEESHIP (TITLE III)

Duration of trusteeships (sec. 304(c))

The Senate bill limits trusteeships to 12 months unless clear and convincing reasons exist for its continuance. The House committee extends the initial time limitation upon trusteeships to 18 months.

Suits to restrain violation of trusteeships (sec. 306(a) Senate; 304(a) House)

The Senate bill grants only the Secretary of Labor to enter suits in Federal district courts to restrain violation of the trustee provisions. The House committee grant the same right to union members.

ELECTIONS (TITLE IV)

Membership lists (sec. 401(b))

The Senate bill requires unions to distribute campaign literature of a bona fide candidate for union office—at the candidate's expense—and also guarantees candidates equal access to membership lists. The House Education and Labor Committee guarantees bona fide candidates the right to inspect and copy membership lists, when union security provisions are part of a collective bargaining agreement.

Removal of officer guilty of misconduct (sec. 401(g))

The Senate bill authorizes the Secretary of Labor to promulgate rules and regulations governing the removal of a union officer guilty of serious misconduct. Union members may remove the officer by secret ballot under the Secretary's regulations. The House committee bill grants the power to district courts, upon a member's petition, to order a recall election.

Election of officers (sec. 402)

Under the Senate bill a union member alleging irregularities in elections can take his complaint to the Secretary of Labor after exhausting remedies available under the union constitution. The Secretary is empowered, under the Senate bill to secure an injunction and to supervise a new election. The House version authorizes the members, after exhausting remedies under union procedures, to secure an injunction in a Federal court. The Secretary of Labor is authorized to supervise a new election, if ordered by the court.

Persons barred from holding union office (sec. 405(a) Senate; 504(a) House)

Persons convicted of committing specified crimes including violation of titles II or III of the bill are barred by the Senate bill from holding union office (except clerical or custodial jobs) for a period of 5 years after serving any part of a prison term. The House version would extend the prohibition to labor relations consultants or employer associations dealing with labor organizations. However, this prohibition is not applicable in cases where citizenship rights have been restored or when a U.S. Board of Parole determines that the person's holding office would not be contrary to the purposes of the bill. The House version applies the 5-year prohibition of holding office to former members of the Communist Party.

CODES OF ETHICAL PRACTICES (TITLE V)

This title in the Senate bill—dropped in the House version—is an exhortation to unions and employer associations to adopt codes of ethical practices which would safeguard the rights of members.

MISCELLANEOUS (TITLE VI)

Punshment for interference with rights of members (sec. 607)

The Senate approved bill provides the punishment of 2 years' imprisonment or a fine of $10,000 for interfering with the rights of union members guaranteed by the bill. This provision is deleted in the House committee bill.

Fiduciary responsiblity (sec. 610, Senate; 501 House)

The Senate bill makes union officers responsible in a fiduciary capacity for union money or other property in their trust. The House version adds that officers may expend union funds in accordance with the provisions of the union constitution and resolutions of the unions-governing bodies.

TAFT-HARTLEY AMENDMENT (TITLE VII)

NLRB jurisdiction and administration (sec. 701)

The Senate bill authorizes State agencies to exercise jurisdiction in labor relations cases when the NLRB has refused to act. The State agencies are required to apply Federal law in handling these cases. The House committee bill requires the NLRB to assert jurisdiction on all labor-management disputes affecting interstate commerce referred to the Board.

In addition the House committee adds the following amendments relating to the NLRB not found in the Senate bill:

1. Increases NLRB membership from 5 to 7 (Section 701(c)).
2. Delegates' determination of representation disputes to regional offices, but reserves the NLRB the authority to review the regional decisions (Section 701(d)(1)).
3. Delegates many of the Board functions to the General Counsel (Section 701(d)(2)).

Construction industry—secondary boycott (sec. 702(c))

The House committee adds an amendment to the Taft-Hartley Act which declares that it is not an unfair labor practice to boycott a "secondary employer who is engaged as a joint venturer, price contractor, subcontractor, or cocontractor, together with the primary employer in a labor dispute, in a construction project * * *"

Economic strikers (sec. 703)

The Senate bill permits economic strikers to vote in accordance with regulations promulgated by the NLRB. The House bill strikes out the Taft-Hartley provisions denying economic strikers the right to vote.

Definition of supervisor (sec. 704)

The Senate bill provides that service assistants in the communications industry do not qualify as supervisors under the Taft-Hartley definition of the term. The House committee eliminates this provision.

Hot cargo agreement (sec. 707, Senate; 705 House)

Both the Senate and House committee bills ban hot cargo agreements. But the House version adds that this provision does not deny an employee the right to refuse to cross a picket line when the employer is engaged in a primary dispute nor is a collective bargaining contract to be invalidated because it "provides that such refusal shall not be cause for the discharge of such employee."

The Farm Mess—End It, Say the People

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. HOSMER. Mr. Speaker, very many of our citizens are anxious to rid the country of the farm mess. In order to express this feeling on to my colleagues I have from time to time placed in this RECORD extracts of letters received from various parts of the country approving a plan I have suggested which involves cutting off the subsidy programs

and disposing of stored surpluses. The following are new and additional extracts approving such a course of action:

"I wish to join the many others who have come forward to congratulate you on your stand on the farm mess. It's refreshing to see forthrightness in Washington and I sincerely believe yours is the right answer."

"I am extremely anxious to see the Federal budget balanced and some of the national debt paid off. With this in mind I wholeheartedly approve of your plan to stop all farm subsidies."

"I should like to say you are 100 percent right to end the farm mess."

"I am also very happy about your sensible farm policy. It seems so unjust to have so much food in storage when there is near starvation in so many parts of the world."

"Stop spending money to teach farmers how to grow more per acre, then paying them to grow less."

"While I would not want to cheat a real honest-to-goodness farmer out of anything he is entitled to, I am hoping that something will be done about farm subsidies, and the huge subsidies paid to farm corporations. Hope you and your fellow Representatives can work out a solution to the farm mess."

"We wish to especially endorse your views on the subject of the farm mess."

"The staggering debt which has already been compiled due to subsidization of agriculture is overwhelming. Instead of correcting a bad situation it seems to me we are adding to it each year by continuing this unfair support of the farmers. In many cases this support is being given to large agricultural organizations and landowners who are in no need whatsoever of this drain on the national dollar."

"I think your program to end the farm mess is a wonderful idea. I certainly hope it gets through."

"I believe the farm subsidy program must be drastically reduced soon."

"I'm glad to hear the plan is to stop all farm subsidies now. I was outraged when it started. Was born in Berks County, Pa., on farm my grandfather got in 1820 or thereabouts, so know a little of farm life. A subsidy of this kind is most unjust to taxpayers and other consumers."

"I certainly think you are right on this farm plan. Sure hope there are others in Washington that will someday wake up to the facts of life."

"I would like to take this occasion to congratulate you on your efforts and hard work you are doing in Congress, especially on the farm subsidy plan. You say that this subsidy will cost another $5.4 billion this year. As you probably know, that is approximately 2½ times as much as the budget was in 1929 ($2.2 billion.) If this giveaway plan can be stopped, it will go a long way toward slowing up inflation."

"Stopping all farm subsidies now sounds like such good sense—that seems the only logical way."

"Thanks for trying a realistic approach to the farm subsidy mess. Please keep trying to bring us back to a free U.S. Government. It will be a hard fight but I hope you will find good support and win in time."

Continuation of Lamb Grading

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mrs. SULLIVAN. Mr. Speaker, I am pleased that the Department of Agriculture decided last week that, for the time being at least, the Department will continue its voluntary program for the grading of lamb and mutton carcasses. The decision was announced July 23, and I am at this point in the RECORD including the official statement from the Department announcing the decision.

On Wednesday, July 22, I placed in the RECORD at pages A6356–7 some material of mine pointing out why the lamb-grading program should not be terminated and urging the women's page editors of the Nation, as well as the TV-radio commentators on homemaker subjects, to alert the Nation's consumers to the intention of the Department to abandon the lamb-grading program. While the immediate danger of such an abandonment of the program has now passed, the announcement from the Department of Agriculture makes it clear that powerful producer interests are anxious to see the program drastically changed and that unless their objections can be compromised the Department may still decide to abandon the lamb-grading program.

PROGRAM STILL IN DANGER

Under the circumstances, I think it is most important that more consumers learn about this issue and make their voices heard on it. It is not very encouraging to learn that less than 1,000 communications came to the Secretary of Agriculture on this issue during the 2 months following the Department's original announcement that it intended to abandon the lamb-grading program. Included in the 1,000 or fewer communications were all of those from producers and feeders, farm organizations, meatpackers and other trade groups directly affected economically, as well as those from consumers. Obviously, there could not have been very many consumer letters in the group.

Equally obviously, the consumers have not seen much in the newspapers or heard much over the air as to this problem, or I am sure more of them would have voiced their views. It is just as important now as it was prior to July 23 for them to advise the Secretary of Agriculture of their opinions on the necessity for assuring adequate grading standards to protect the consumers.

The Department of Agriculture press release on the issue of revising or discontinuing grading standards for lamb and mutton carcasses is as follows:

USDA TO CONTINUE FEDERAL GRADING OF LAMB CARCASSES—TO REVISE GRADE STANDARDS

WASHINGTON, July 23, 1959.—Secretary of Agriculture Ezra Taft Benson today announced that Federal grading of lamb and mutton carcasses will be continued, and that the Department will proceed promptly to consider revised grade standards for lamb and mutton to eliminate any deficiencies in the present standards. "If improved grade standards for lamb and mutton are not developed to meet more adequately the needs of the industry the Department will give further consideration to suspension of Federal grading of lamb and mutton carcasses," the Secretary said.

The Department has had under consideration the request of some groups that Federal grading of lamb and mutton be suspended. Since May 25, the Department has been receiving the views of interested individuals and groups on this question. The decision to continue the Federal grading service to lamb and mutton was made after a careful analysis of these views.

Secretary Benson expressed appreciation for the broad response which enabled the decision to be made. He said that many of the comments and views received indicated the need for a revision of the criteria in the present grade standards. One of the principal contentions was that the present standards place too great a premium on overfat lamb.

The Secretary invites the livestock and meat industry and other interested parties to submit to the Department by September 1, 1959, proposals for improving the grade standards for lamb and mutton carcasses. The Department would make public by October 1, 1959, recommendations for changes in the expectation that the revised standards would be announced by December 1, 1959.

The Secretary emphasized that the Federal grading of lamb and mutton carcasses has no relation to Federal meat inspection required by law for all meat moving in interstate commerce. Meat inspection is to assure wholesomeness of the product while grading relates to the quality of the meat. Also, the question before the Department was not in any way concerned with Federal grading of beef which comprises the major share of Federal meat grading.

The Federal meat grading service is a completely voluntary service of the Department, performed only upon request, and paid for by those receiving the service.

Notice that the Department was considering suspension of this voluntary service on lamb and mutton, and the invitation for interested parties to comment on the proposal brought a large volume of responses. Almost 1,000 communications were received. Comments and views were received from lamb producers and feeders, farm and other organizations, State and local government officials and agencies, land-grant colleges and other university representatives, consumers, meatpackers, livestock and meat-marketing

agencies, and institutional purchasers. The preponderance of the views received was for continuance of the Federal grading of lamb and mutton.

Poison in Your Water—No. 148

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 30, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the San Diego (Calif.) Tribune of June 1, 1959, entitled "Sewerage Woes Grow in County."

[From the San Diego, Calif., Tribune, June 1, 1959]

SEWAGE WOES GROW IN COUNTY

(By Mike O'Connor)

Mention the word "sewer" in San Diego County's unincorporated areas and the chances are you'll get an argument.

Like smog and water, sewage is a problem many southern Californians have grumbled about one time or another.

A county official once described the sewerage facilities at Rancho Santa Fe, an exclusive residential area, as an "outhouse."

Few will disagree that the sanitation argument boils down to one point: How to provide adequate facilities for the thousands of persons who move to southern California each year.

Here is what has happened in unincorporated San Diego and what may lick the sanitation problems of the future.

Sewage in unincorporated areas is handled by 14 sanitation districts. They are locally created and operated by the county public works department.

COUNCIL CONTROLS DISTRICT

The districts, at Alpine, Cardiff, Julian, Lakeside, Lemon Grove, Poway, Ramona, Rancho Santa Fe, Rolando, Solana Beach, Spring Valley, and Vista, are controlled by the county board of supervisors.

The Palm City district committee consists of the mayor and one councilman of Imperial Beach and the mayor of San Diego. The San Ysidro district is controlled by the San Diego City Council.

Budgeted appropriations for all districts in the 1959–60 year totaled more than $642,000.

Most of the districts have had the same growing pains.

They floated bond issues to build filtration plants and lay sewer lines. Then, explosive residential growth taxed facilities and raised the problem of expansion.

VISTA PROBLEM BARED

Jean Vincenz, county public works director, tells this story:

"Three years ago the Vista Sanitation District found its sewage treatment facilities nearing capacity. An addition was built increasing the capacity five times. Now, this year, the addition is approaching capacity."

Vista is not an isolated case. Rancho Santa Fe, which Vincenz describes as the most overloaded sanitation district in the county, last week asked the board of supervisors to prepare a bond report.

This report could lead to another bond issue to build a second filtration plant.

The rate of growth indicates the north county area is the sanitation sorespot.

It has been estimated that a 9-community area of northern San Diego County will swell from a population of 29,000 to 365,000 in 40 years.

UNIT URGES STUDY

In 1957, these communities joined to form the San Dieguito Area Sewerage Planning Group. The communities stretch from Del Mar to a point south of Oceanside and inland to Poway and San Marcos.

The group seeks a long-range county master plan for sewerage control.

Americanism in Danger

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 30, 1959

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an editorial published in the July 17, 1959, issue of the Jackson (Miss.) Daily News entitled "Americanism in Danger." This article was written by the Honorable Tom Q. Ellis, clerk of the Mississippi State Supreme Court, who recently completed a 3-year term as general grand high priest of general grand chapter, Royal Arch Masons, a worldwide organization and the largest Masonic group in the world, under one jurisdiction.

Also included with Mr. Ellis' article is an editor's note prepared by Mr. James M. Ward, editor of the Jackson, (Miss.) Daily News setting out Mr. Ellis' Masonic background and accomplishments.

The article, "Americanism in Danger" is an excellent dissertation on a subject of deep concern to all of us. This article, including the aforementioned editor's note follows:

AMERICANISM IN DANGER

(By Tom Q. Ellis)

(EDITOR'S NOTE.—Mr. Ellis is a past grand master of Mississippi F. & A.M.; is a past grand presiding officer of every other York Rite statewide body in Mississippi; past grand patron, Order Eastern Star in Mississippi; a Scottish Rite K.C.C.H.; and in 1957 finished a 3-year term as general grand high priest of General Grand Chapter, Royal Arch Masons—a worldwide organization and the largest Masonic organization in the world, under one head. It has been stated many times that he has been accorded more Masonic honors than has any other man in the entire written history of Freemasonry.

By invitation he has spoken before fraternal, civic, school and other organized groups in practically every State in the Union and is said to be known personally by more people than any other living man. He humbly states that because of these things he feels a responsibility in "speaking up" in what he considers a serious crisis, for whatever of good his influence may mean. The above article was approved and sent out by the governing body of the Shrine (Imperial Council) to its 166 Shrine Temples, representing approximately 900,000 Shriners in North America. By this means he hopes it will "seep down" to the 5 million Masons in America, and there are already convincing instances that it is doing just that. * * * Medina Shrine Temple in Chicago, the third largest Temple in America, with about 23,000 Shriners, publishes a monthly magazine that goes out to all its members. This article was featured in their recent July issue. A Shrine Temple in Oklahoma City, Okla., has made a recording of the article for broadcasting purposes. He states that Freemasonry, being a human organization, there is a small percentage who will take issue with him and perhaps attempt "reprisals" in some form, but he is doing his duty as he sees it, "let the chips fall where they may.")

Pure and undefiled Americanism for which our forebears fought, bled, and died is today under serious and dangerous attack; not only from without but tragically and dangerously from within. It results from long range, boastful plans formulated by communism more than 30 years ago. Swept along with its ever-rising tide are multitudes of otherwise good Americans who under the misnomer of tolerance or liberalism are aiding and abetting this godless, hellborn objective.

The Scottish Rite, the York Rite, and the Shrine are of common parentage, viz: the Blue Lodge, whence come their philosophy, their humanitarian ministry, their faculty for leadership and their inspiration. Friendly rivalry is healthful and much to be desired. But misguided, overly enthusiastic brethren sometimes render hurtful disservice to the entire Masonic structure by overstepping the bounds of friendly rivalry and by overlooking the human imperfections of their favorite Masonic body, while holding up to ridicule and sarcasm, the imperfections of another segment. United we stand because united we must stand in order to defeat the dangerous enemy who has gained such a foothold in our very midst.

The time is here for real Masons to avoid any semblance of hiding behind the cloak of refusing to engage in controversial matters.

Saving our America is not a controversial matter among real Masons and other good Americans.

It is time for us to stand up and be counted. A political court (and that is being kind to them) is freeing rapists, murderers, and Communists with alarming regularity. At the last count they have freed some 59 known Communists who were jailed for plotting the overthrow of our Government by force and violence. They have nullified subversive control laws of 41 States and they have nullified State laws and bar association regulations as to Communists. They have told State and city governments that a teacher in our schools, or a prospective teacher cannot be questioned as to his or her associations with the Communist Party.

We Masons make no public boasts, but unquestionable records disblose that the Boston Tea Party had its inception in a lodge room in Boston. We know that George Washington was master of his lodge when sworn in as our first President; that the oath was administered by Chancellor Livingston who at the time was grand master of New York, and the Bible used was taken from a masonic altar. We know that Benjamin Franklin, Paul Revere, and other leaders of their day were past grand masters. We also know that other leading Masons of that day were dominant figures in framing and signing our Declaration of Independence, and writing our great Constitution which Glad-

stone said was the greatest instrument ever struck by human hands. But that great document is being emasculated by psychological and sociological judicial decrees purporting to be the law of the land.

Yes, the time is here for all good Masons, Scottish Rite, York Rite, and Shriners to join hands and hearts with all other good Americans (and there are plenty other good Americans) and stand up and be counted in saving that brand of Americanism which is our most priceless heritage. Mighty is truth and it shall prevail.

The truth for which united we must stand will prevail throughout all eternity. The pyramids of Egypt will sink beneath the sands of the desert; all the great masterpieces of human genius that adorn the art galleries of the world will fade beneath the still lapse of time; structures of steel and stone that kiss the skies in lofty grandeur will be leveled in the dust. But the eternal truths and principles for which all good Masons and all other good Americans must stand will be shedding forth their glorious light when stars and sun are sunk in night.

Bob Considine Praises Nixon Conduct in Russia

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 30, 1959

Mr. JUDD. Mr .Speaker, under leave to extend my remarks in the RECORD, I include the following broadcast from Moscow on July 26 by Bob Considine, giving a ringside report of the outstanding poise, skill, and effectiveness with which Vice President NIXON has conducted himself and our country's interests in his dealings with the Soviet dictator. The latter apparently thought he could browbeat the Vice President as he bullies his own unfortunate peole. NIXON, like Americans as a whole, did not seek a fight, but he did not run away from one or weaken under threats. The dangers of war started by Khrushchev in his ignorance of American character has been lessened by the poised and dignified but frank and firm way Mr. NIXON stood up to him.

The broadcast follows:

ON THE LINE WITH BOB CONSIDINE

ANNOUNCER: "Now, here is Bob Considine in Moscow."

CONSIDINE: "Hello, everybody. There are more Americans rattling around Moscow these warm days than ever before in the city's 800 years of life. There are busloads from Akron, Ohio, smaller groups from California and Jersey, and a big jet planeload of newspaper, radio, and TV people from Washington, New York, Chicago, Kansas City, New Orleans, San Francisco, and what have you at the American exhibition in Sokolniki Park, where the tsars once hunted with falcons. By the way, the American flag flies next to the scarlet hammer-and-sickle, and a Russian band the other day played 'The Star Spangled Banner' with the assurance of the U.S. Marine Band.

"There's another American here in town, a fellow named DICK NIXON, the Vice President to the United States. I'm going to do my level best, ladies and gentlemen, to keep this from sounding like a campaign speech in his behalf. I happen to be a Democrat, but whatever your political affiliation or how you may have felt about NIXON in the past, you would have been damned proud of him if you had seen him in action here the past few days.

"President Eisenhower had defined the scope of NIXON'S duties and missions in his Wednesday news conference. The President said, 'It's really an exchange of visits between Mr. Kozlov and Mr. NIXON. It's a good-will gesture and we wanted to have a prominent American to officiate at the opening of our exhibit over there.'

"Well, it's turned out to be a lot more than that, and will continue to be as Nixon goes to Leningrad tomorrow and thence to several Siberian industrial cities before flying into Warsaw. The unexpected has been happening a lot more than the expected, as in the case of the decision to visit Poland. It is the manner in which NIXON has met and dealt with these incidents and emergencies which has won him a warm spot in the hearts of the people around him, including the aforementioned Americans in Moscow.

"The big hurdle he had to overcome, of course, was the unusual turn his first meeting with Premier Khrushchev took. NIXON had been assured in Washington that the ony serious or semiserious discussion he would have with Russia's No. 1 man, would be at Khrushchev's home, today, Sunday. Such earlier meetings as there might be would be largely ceremonial affairs—oh, an exchange of handshakes, let's say, proposals of toasts, cutting of the ribbon at the fairgrounds, and so forth. But nobody told Khrushchev about these polite rules, and even if he had been told, he was under no obligation, certainly, to abide by them.

"They were calculated plans, drawn up by well-meaning, excessively polite and not very realistic career men in our State Department in Washington. They would apply almost anywhere else on earth and merit the cooperation of almost any other statesman. But NIXON found himself in realistic Russia and faced by the foremost master of the blunt approach now operating on the international stage, Comrade Nikita Khrushchev.

"Khrushchev was sore at the Americans, notably at the Senate and the President, for proclaiming this past week a week of prayer for the captive nations. It is his often angrily repeated contention that there are no captive nations under the Red flag. NIXON represented or symbolized the American view on this, and thus caught the brunt of Khrushchev's assertions and accusations. What was supposed to be little more than a tete-a-tete immediately erupted into NIXON'S toughest day since the time he was called upon to explain his campaign expenses over a nationwide TV network—or the time when Harold Stassen seemed to be making headway in his efforts to replace him on the GOP ticket with Christian Herter.

"I happened to be standing close to NIXON and Khrushchev at the beginning of what turned out to be hours of public horn-locking. The men had just alighted from their big Russian limousines outside the entrance to the lovely fairgrounds. And now they stood together while others came up to be introduced—NIXON, in his lean Madison Avenue Oxford gray; Khrushchev in a light suit with an enameled dove of peace and his two orders of Lenin on his chest, a light piped sunhat cocked on his bald head.

"Anastas Mikoyan, Russia's trade wizard, joined the group and was introduced to NIXON. NIXON took him by the arm and said to Khrushchev, 'In my country, Mr. Khrushchev, we have a lot of respect for Armenians like Mr. Mikoyan here. We regard them as shrewd traders.' And Khrushchev immediately snorted, 'Then you've lost your ability to trade. Mikoyan couldn't make a single deal while he was in your country.' NIXON grinned and said, 'Oh, oh. I guess I shouldn't have gotten into that.

"But that beginning was mild compared to what followed. The two men went immediately from the entrance gate to the RCA color TV exhibition, the purpose of which visit was to show Khrushchev our newly developed video tape which is rapidly replacing film or kinescope on delayed TV shows.

"Well, it turned out to be much more than a simple electronic demonstration. Khrushchev naturally assumed he was on the air, and this, he figured, was no time to waste with lukewarm words of greeting and similar nonsense. He plunged right into NIXON, brusquely brushed aside the Vice President's polite contentions and joking denials. He took complete charge of the scene, alternating laughs, grunts, vigorous gestures, and fist-pounding statements.

"This was no sick man, as he has been mistakenly painted in recent weeks. This was a vital, dynamic, positive world leader who'd stolen the show from a man who was at first puzzled, then in a mood to placate and dismiss, and finally as full of fire as Khrushchev himself. It was a superb comeback on NIXON'S part.

"The two exponents of separate ideologies then had another 50-minute session while in the course of inspecting the model American home that is part of the exhibition. The talk and the arguments, and in some cases, agreement, covered a vast range of matter—the Berlin situation, German Peace Treaty, war and peace, threats, ultimatums, washing machines and rockets, Geneva Conference of Foreign Ministers, relative strength of the two powers, American bases on foreign soil, dictatorship and women.

"Sometimes there were honest misunderstandings of the interpreters. At one point NIXON tried to explain that the American housewife has become emancipated more or less because of the number of labor-saving devices in her kitchen. Khrushchev glumly commented that Russian men don't think of their women in terms of closets and other kitchen gimmicks.

"The major misunderstanding, of course, was over the meaning of a statement by NIXON that no country, however strong, could inflict its will or strength on another power in such a way as to be issuing a tacit ultimatum. It sounded very much like a threat to Khrushchev, and he hotly retorted that his country had the means, better means, indeed, to answer any such threats. The debate got a little out of hand at that point.

"Late in the afternoon, NIXON delivered the best speech of his life, I think, at the official opening of the exhibition. Halfway through it, Khrushchev started to interrupt again. NIXON turned to him and said, 'I have the floor.'

The band played our national anthem beautifully. "Americans who are inclined to fidget and look at their watches through the playing of 'The Star Spangled Banner' back home, and who regard all manifestations of patriotism as pure corn, should have been in Moscow Friday. They would have experienced, as did those of us who were lucky enough to be present, the exhilarating sensation of being fiercely proud of our heritage, a flag and an embattled countryman named RICHARD NIXON.

"I don't quite see what's left for the two men to talk about today when Khrushchev has NIXON as his guest. The salient differences of opinion and policy have been gone over time and again. They were restated in another way yesterday at a luncheon given to NIXON by V. V. Matskevich, the Soviet Minister of Agriculture. Matskevich criticized the action of the U.S. Senate and the President in passing and OK'ing the 'prayers for captive nations' resolution, but said, 'These small clouds will not prevent our people from marching to peace and freedom.'

"NIXON replied, 'We have differences from time to time, which are critical. We disagree, of course, with your comments on the captive nations resolution. But it does indeed seem that something always happens when we begin one of these good will affairs. When your Deputy Premier, Kozlov, was in California talking peace, Mr. Khrushchev, at the same time made a speech in Poland which was not kind to the United States. When Mr. Khrushchev calls us imperialists and colonialists our reaction is adverse, but we respect his right to say it.'

"As you probably know by now, NIXON's going to visit Warsaw while on this trip. He had hoped to be able to fly out of Siberia and onward to Alaska and then back to Washington, completing a circumnavigation. But the Russians could not see their way clear to let him go out that way. He immediately entered into negotiations with the Poles apparently, and now they have consented to receive him for the last 2 days of his long trip.

"It's been a great trip for the tireless NIXON and his equally indefatigable wife. Now that the Muscovites have seen them in their newspapers, heard them on the radio and watched them on television, the couple is instantly recognized. They are a friendly twosome, the Nixons, and the people respond warmly to their smiles and to their waves. They have conducted themselves impeccably.

"Well, that's about it, friends. I'll see you next week, same time, same station and with the same good old sponsor, and I'll be talking to you also from Russia on that occasion."

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

SENATORS WITH RESIDENCES IN WASHINGTON
